This is a preview of "CGA G-5.3-2011". Click here to purchase the full version from the ANSI store.

Contents **Page**

1 Scope 1

2 Classification 1
2.1 Types 1
2.2 Total hydrogen percent 1
2.3 Quality verification levels 1
2.4 Fuel cell grade 1
2.5 Quality tests 3

3 Quality verification systems 3
3.1 Production qualification tests 3
3.2 Analytical requirements of the production qualification tests 3
3.3 Lot acceptance tests 4

4 Sampling 4
4.1 Sample size 4
4.2 Gaseous samples 4
4.3 Liquid samples 5
4.4 Sampling compressed hydrogen at the dispenser 5

5 Analytical procedures 5
5.1 Parameters of analysis 5
5.2 Percent hydrogen 6
5.3 Water content 6
5.4 Total hydrocarbon content 6
5.5 Oxygen content 7
5.6 Argon, nitrogen, helium, and neon content 7
5.7 Carbon dioxide content 7
5.8 Carbon monoxide content 8
5.9 Mercury vapor content 8
5.10 Para content 8
5.11 Particulates 8

6 Containers 9
6.1 Hydrogen containers 9
6.2 Container preparation 9
6.3 Valves on hydrogen containers 9

7 Moisture conversion data 9

8 References 12

Tables

Table 1—Common purity nomenclature 1
Table 2—Directory of limiting characteristics 2
Table 3—Typical uses 3
Table 4—Trace impurities detrimental to fuel cells, but not typically analyzed 3
Table 5—Moisture conversion data [16] 10
