BASE POLYMERS

The Council on Scientific Affairs of the American Dental Association has approved American Dental Association Standard No. 139 for Dental Base Polymers. This and other standards for dental materials, instruments and equipment are being formulated by working groups of the ADA Standards Committee on Dental Products (formerly Accredited Standards Committee MD156 for Dental Materials, Instruments and Equipment). The Committee has representation from all interests in the United States in the standardization of materials, instruments and equipment in dentistry. The Council has adopted the standards, showing professional recognition of their usefulness in dentistry, and has forwarded them to the American National Standards Institute with a recommendation that the standards be approved as American National Standards. The American National Standards Institute granted approval of ADA Standard No. 139 as an American National Standard on June 6, 2012.

The ADA Standards Committee on Dental Products thanks the members of Working Group 2.15 on Denture Base Resin and Resilient Liners and the organizations with which they were affiliated at the time the standard was developed:

Sheng Lin-Gibson (chairman), NIST, Gaithersburg, MD;

Lawrence Gettleman, University of Louisville School of Dentistry, KY;

Clyde Ingersoll, CEI Enterprises, Ltd., Tonawanda, NY;

John Jones, University of Texas Health Science Center, San Antonio, TX;

Robert Kelly, University of Connecticut Health Sciences Center, Farmington, CT;

Michael Ryan, Food and Drug Administration, Silver Spring, MD; and

Wayne Wozniak, American Dental Association, Chicago, IL.

FOREWORD

(This Foreword does not form a part of the ANSI/ADA Standard No. 139 for Dental Base Polymers).

This standard is an adoption of ISO 20795-1:2008, Dentistry – Base polymers – Part 1: Denture base polymers; and ISO 20795-2:2010, Dentistry – Base polymers – Part 2: Orthodontic base polymers. ADA SCDP Working Group 2.15 on Denture Base Resin and Resilient Liners examined the international standards and found them acceptable as a modified adoption for ANSI/ADA Standard No. 139.

ANSI/ADA Standard No. 139 incorporates ISO 20795-1:2008, Technical Corrigendum 1. The corrections contained therein are the only modifications made to ISO 20795-1:2008 and ISO 20795-2:2010 beyond combining them to form ANSI/ADA Standard No. 139. This standard is presented in two parts: 1). Denture-base polymers; and 2). Orthodontic-base polymers.

ANSI/ADA Standard No. 139 replaces ANSI/ADA Standard No. 12-2002, Denture Base Polymers.

Specific qualitative and quantitative requirements for freedom from biological hazard are not included in this standard. In assessing possible biological or toxicological hazards, reference should be made to ANSI/ADA Standard No. 41, ISO 7405 and ISO 10993-1.

PART 1:

DENTURE BASE POLYMERS

1 SCOPE

1.1 This part of ANSI/ADA Standard No. 139 classifies denture base polymers and copolymers and specifies their requirements. It also specifies the test methods to be used in determining compliance with these requirements. It further specifies requirements with respect to packaging and marking the products and to the instructions to be supplied for use of these materials. Furthermore it applies to denture base polymers for which the manufacturer claims that the material has improved impact resistance. It also specifies the respective requirement and the test method to be used.

1.2 Although this part of ANSI/ADA Standard No. 139 does not require manufacturers to declare details of the composition, attention is drawn to the fact that some national or international authorities require such details to be provided.

1.3 This part of ANSI/ADA Standard No. 139 applies to denture base polymers such as those listed below:

- a) poly(acrylic acid esters);
- b) poly(substituted acrylic acid esters);
- c) poly(vinyl esters);
- d) polystyrene;
- e) rubber modified poly(methacrylic acid esters);
- f) polycarbonates;
- g) polysulfones;
- h) poly(dimethacrylic acid esters);
- i) polyacetals (polyoxymethylene);
- j) copolymers or mixtures of the polymers listed in a) to i).
