ANSI/AIHA Z9.5-2012

Laboratory Ventilation

*A Publication by
American Industrial Hygiene Association*

BY THE ANSI/AIHA Z9.5 SUBCOMMITTEE

ANSI/AIHA® Z9.5–2012

ANSI/AIHA® Z9.5 – 2012 Laboratory Ventilation

Secretariat

American Industrial Hygiene Association

Approved April 26, 2012

American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standard's developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he or she has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of approval. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Contents

	Page
Foreword	iii
1 Scope, Application and Purpose	1
1.1. Scope and Application	1
1.2. Purpose	2
2 Laboratory Ventilation Management Plan	3
2.1. General Requirements	3
2.2. Chemical Hygiene Plan	7
2.3. Responsible Person	7
2.4. The Role of Hazard Assessment in Laboratory Ventilation Management . . .	8
2.5. Recordkeeping	12
3 Laboratory Fume Hoods	12
3.1. Design and Construction	13
3.2. Laboratory Fume Hood Types	16
3.3. Hood Airflow and Monitoring (Design and Performance Specifications) . . .	22
4 Other Containment Devices	28
4.1. Gloveboxes	28
4.2. Ductless Hoods	34
4.3. Special Purpose Hoods	37
5 Laboratory Ventilation Systems Design	38
5.1. Laboratory Design	38
5.2. Laboratory Airflow Management	40
5.3. Supply Air	46
5.4. Exhaust	49
6 Commissioning and Routine Performance Testing	65
6.1. Performance specifications, tests, and instrumentation	65
6.2. Commissioning of Laboratory Ventilation Systems	73
6.3. Commissioning Fume Hoods and Different Types of Systems	75
6.4. Ongoing or Routine Hood and System Tests	81
7 Work Practices	82
7.1. General Requirements and Training	82
7.2. Posting	83
7.3. Operating Conditions	83
7.4. Training	83
8 Preventive Maintenance	84
8.1. Operations During Maintenance Shutdown	84
8.2. Housekeeping Before and After Maintenance	84
8.3. Safety for Maintenance Personnel	85
8.4. Work Permits and Other Communications	85
8.5. Records	86
8.6. Testing and Monitoring Instruments	86
8.7. Monitoring Fans, Motors, and Drives	88
8.8. Critical Service Spares	88
8.9. Critical Service Instrumentation	89
8.10. Performance Monitoring Equipment	89
9 Air Cleaning	89
9.1. Supply Air Cleaning	89
9.2. Exhaust Air Cleaning	89
9.3. Filtration for Recirculation	90
9.4. Testing and Monitoring	92

Appendices

Appendix 1 Definitions, Terms, and Units	93
Appendix 2 Referenced Standards and Publications	98
Appendix 3 Selecting Laboratory Stack Designs	101
Appendix 4 Audit Form for ANSI/AIHA Z9.5-2010	108
Appendix 5 Sample Table of Contents for Laboratory Ventilation Management Plan	129

Foreword (This foreword is not part of the American National Standard Z9.5–2012.)

General coverage. This standard describes required and recommended practices for the design and operation of laboratory ventilation systems used for control of exposure to airborne contaminants. It is intended for use by employers, architects, industrial hygienists, safety engineers, Chemical Hygiene Officers, Environmental Health and Safety Professionals, ventilation system designers, facilities engineers, maintenance personnel, and testing and balance personnel. It is compatible with the ACGIH® *Industrial Ventilation: A Manual of Recommended Practices*, ASHRAE ventilation standards, and other recognized standards of good practice.

HOW TO READ THIS STANDARD. The standard is presented in a two-column format. The left column represents the requirements of the standard as expressed by the use of “shall.” The right column provides description and explanation of the requirements and suggested good practices or examples as expressed by the use of “should.” Appendices 1 and 2 provide supplementary information on definitions and references. Appendix 3 provides more detailed information on stack design. Appendix 4 provides a sample audit document and Appendix 5 presents a sample table of contents for a Laboratory Ventilation Management Plan.

Flexibility. Requirements should be considered minimum criteria and can be adapted to the needs of the User establishment. It is the intent of the standard to allow and encourage innovation provided the main objective of the standard, “control of exposure to airborne contaminants,” is met. Demonstrably equal or better approaches are acceptable. When standard provisions are in conflict, the more stringent applies.

Response and Update. Please contact the standards coordinator at AIHA®, 3141 Fairview Park Drive, Suite 777, Falls Church, VA 22042, if you have questions, comments, or suggestions. As with all ANSI standards, this is a “work in progress.” Future versions of the standard will incorporate suggestions and recommendations submitted by its Users and others.

This standard was processed and approved for submittal to ANSI by the Z9 Accredited Standards Committee on Health and Safety Standards for Ventilation Systems. Committee approval of the standard does not necessarily imply that all committee members voted for its approval. At the time it approved this standard the Z9 Committee had the following members:

Thomas Smith, Chair
Theodore Knutson, Vice Chair
David Hicks, Secretariat Representative
At the time of publication, the Secretariat Representative was David Hicks.

<i>Organization Represented</i>	<i>Name of Representative</i>
ACGIH®	G. Knutson
ASHRAE	T. Smith
American Foundry Society	R. Scholz
ASSE	P. Osley
Global Finishing Solutions	G. Raifsnider
National Association of Metal Finishers	K. Hankinson
NIH	F. Memarzadeh
NIOSH	M. Elliott
OSHA	L. Hathon

Individual Members

D.J. Burton
S. Crooks
L. DiBerardinis
C. Figueroa
S. Gonsel
E. Pomer
N. McManus
D. O'Brien
J. Price
K. Paulson
M. Rollins
J. Sheehy

Subcommittee Z9.5 on Laboratory Ventilation, which developed this standard, had the following members:

Steve Crooks, Chair
James Coogan, Vice Chair

L. DiBerardinis
D. Walters (*)
D.J. Burton
D. Hitchings
T.C. Smith
V. Neuman
J.M. Price
G. Knutson
G. Sharp
S. Hauville
R.A. (Bob) Henry
M. Tschida
C.J. McAfee
R.A. DeLuca
P. Pinkston
K. Kretchman
S. Lengerich
P. Carpenter (Technical Resource)
A. Kolesnikov (Observer)

* retired during the standard's development

* Contributing member of Z9.5 subcommittee but not a voting member of the full Z9 Committee at the time of standard approval.

American National Standard for Laboratory Ventilation

Requirements of the Standard

1 Scope, Application and Purpose

1.1 Scope and Application

This standard applies to the ventilation in most laboratories and is written for all laboratory ventilation stakeholders. An emphasis is placed on those with legal responsibilities and liability for providing a safe laboratory. However, users/operators, industrial hygienists, other safety and environmental professionals will also find the standard written for their needs.

The standard cannot establish strict liability in all cases but does attempt to fix accountability in many relationships that exist with its context. Please note that such relationships are defined throughout the standard and generally encompass the following: administration - occupant; employer - employee; management - staff; owner - occupant; owner - tenant; teacher - student; designer - owner, etc.

This standard does not apply to the following types of laboratories or hoods except as it may relate to general laboratory ventilation:

- animal facilities,
- biosafety cabinets,
- explosives laboratories,
- high containment facilities (e.g., BSL 3, BSL 4, facilities operating under "chemical surety plans," etc.),
- laminar flow hoods and isolators (e.g., a clean bench for product protection, not employee protection), and
- radioisotope laboratories.

General laboratory safety practices are not included except where they may relate to the ventilation system's proper function or effectiveness.

Clarification and Explanation of the Requirements

Laboratories conduct teaching, research, quality control, and related activities and should satisfy several general objectives, in addition to being suited for the intended use they should

- be energy efficient without sacrificing safety, compliance, or space condition requirements,
- be safe places to work,
- comply with environmental, health, and safety regulations, and
- meet any necessary criteria for the occupants and technology involved in terms of control of temperature, humidity, and air quality.

Appendix 2 offers several references providing information, guidelines or specific requirements for

- laboratory animals – AAALAC,
- biosafety cabinets – NSF,
- biohazardous materials – ABSA, and CDC,
- flammables, pyrophoric and explosives – NFPA, ISEE, and IMC,
- high containment facilities – CDC, ISPE, and USAMRICD,
- laminar flow hoods and isolators – NSF and CETA,
- radioactive materials – NRC, and
- special environmental requirements for product protection such as contamination control from particulates – CETA and IEST.

This standard does not apply to comfort considerations unless they have an effect on contaminant control ventilation.
