Authority

AMCA Publication 202 was approved by the AMCA Membership on 13 February 1998. It was reaffirmed in 2007 and 2011.

AMCA 202 Review Committee

Jim Smith, Chairman	Aerovent, A Twin City Fan Company
Mark Schultz	American Fan Company
Tung Nguyen	Emerson Ventilation Products
Scott Phillips	The New York Blower Company
Tom Berger	Pace Company, Division of York International
Bill Smiley	The Trane Company
Paul R. Saxon	AMCA Staff

Disclaimer

AMCA uses its best efforts to produce standards for the benefit of the industry and the public in light of available information and accepted industry practices. However, AMCA does not guarantee, certify or assure the safety or performance of any products, components or systems tested, designed, installed or operated in accordance with AMCA standards or that any tests conducted under its standards will be non-hazardous or free from risk.

Objections to AMCA Standards and Certifications Programs

Air Movement and Control Association International, Inc. will consider and decide all written complaints regarding its standards, certification programs, or interpretations thereof. For information on procedures for submitting and handling complaints, write to:

Related AMCA Standards and Publications

Publication 200 ***AIR SYSTEMS***

System Pressure Losses
Fan Performance Characteristics
System Effect
System Design Tolerances

Air Systems is intended to provide basic information needed to design effective and energy efficient air systems. Discussion is limited to systems where there is a clear separation of the fan inlet and outlet and does not cover applications in which fans are used only to circulate air in an open space.

Publication 201 ***FANS AND SYSTEMS***

Fan Testing and Rating
The Fan "Laws"
Air Systems
Fan and System Interaction
System Effect Factors

Fans and Systems is aimed primarily at the designer of the air moving system and discusses the effect on inlet and outlet connections of the fan's performance. System Effect Factors, which must be included in the basic design calculations, are listed for various configurations. AMCA 202 and AMCA 203 are companion documents.

Publication 202 ***TROUBLESHOOTING***

System Checklist
Fan Manufacturer's Analysis
Master Troubleshooting Appendices

Troubleshooting is intended to help identify and correct problems with the performance and operation of the air moving system after installation. AMCA 201 and AMCA 203 are companion documents.

Publication 203 ***FIELD PERFORMANCE MEASUREMENTS OF FAN SYSTEMS***

Acceptance Tests
Test Methods and Instruments
Precautions
Limitations and Expected Accuracies
Calculations

Field Performance Measurements of Fan Systems reviews the various problems of making field measurements and calculating the actual performance of the fan and system. AMCA 201 and AMCA 202 are companion documents.

TABLE OF CONTENTS

1. Introduction	.1
2. Procedure for Troubleshooting	.1
3. Safety Precautions	.1
4. System Checklist	.1
5. Fan Manufacturer's Analysis	.8
5.1 Data required for analysis	.8
5.2 Probable manufacturer action	.9
6. Conclusion	.10
Annex A. Noise	.11
Annex B. Insufficient Airflow	.14
Annex C. Airflow High	.16
Annex D. Static Pressure Wrong	.17
Annex E. Power High	.19
Annex F. Fan Does Not Operate	.20
Annex G. Premature Failure	.21
Annex H. Vibration	.22

Troubleshooting

1. Introduction

After the installation of an air moving system is completed, a system sometimes fails to achieve its designed performance.

This part of the AMCA Fan Application Manual will help you identify what is wrong and decide how to correct it.

2. Procedure for Troubleshooting

2.1 Look in the "Master Troubleshooting Appendices" for a subject which corresponds with the apparent problem.

2.2 Check each of the "Probable Causes" listed.

2.3 If the cause of the trouble is not found proceed through the "System Checklist" (see Section 4).

2.4 If the problem has still not been solved, it is now advisable to contact the representative of the fan manufacturer. He should be given the results of the "System Checklist" and the additional information listed in Section 5.1.

2.5 The fan manufacturer or his representative will analyze the information submitted, as outlined in Section 5.2. With this information and, if necessary, an on-site inspection, he may be able to explain why the system is not achieving its design performance and may recommend changes in the system or the fan installation which will overcome the problem.

3. Safety Precautions

Before checking the fan and system it will be necessary to shut down the fan. During inspection the fan must be electrically isolated and all disconnect switches and other controls **LOCKED** in the "OFF" position. Where these are in locations remote from the fan, prominent **DO NOT START** signs should also be in place.

CAUTION - Even when **LOCKED** out electrically, fans located outdoors or in a parallel or series fan system may be subject to "wind-milling." Therefore, as an added precaution, the impeller should be secured to physically restrict rotational movement.

4. System Checklist

Poor system performance may arise from a number of causes including:

- Improper installation or assembly of the fan
- Damage in handling or transit
- System design error
- Deterioration of the system
- Faulty controls
- Poor fan selection
- A combination of several factors.

A systematic check of the items listed here should help identify the problem - or problems - and allow suitable corrective action to be taken.
