Approved August 18, 2005  
**American National Standards Institute, Inc.**

## American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objectives be considered and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing or using products, processes or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

**CAUTION NOTICE:** This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

**Foreword** (This Foreword is not part of the American National Standard Z4.4-2005)

According to Occupational Safety and Health Administration (OSHA) Standard 29 Code of Federal Regulation (CFR) Part 1928.110, Field Sanitation Final Rule, page 16050: "The absence of or inadequate sanitation and hygiene has long been recognized by medical science as a principal factor in the transmission of bacterial, viral and parasitic diseases. Inadequate water supply and human waste removal have been shown to produce critical health problems. The provision of potable drinking water, the proper disposal of human wastes and the use of personal and public hygienic practices are known to prevent the transmission of many communicable diseases. Thus, the provision of sanitation facilities is necessary to insure safe and healthy working conditions."

This standard prescribes minimum sanitation requirements for fields and temporary labor camps to protect the health and safety of persons working in fields, or residing in the camps, or both. Work on this project was begun in 1966 by a subcommittee of the U.S. Standards Committee on Safety for Industrial Sanitation, Z4. On March 8, 1968 the standard was approved as an American National Standard.

On September 1, 1972, the National Congress of Hispanic American Citizens filed a petition asking OSHA to issue a standard for agricultural workers requiring employers to provide potable drinking water and handwashing and toilet facilities in the field.

Pursuant to a 1982 court-approved settlement agreement that resolved almost ten years of litigation surrounding OSHA's activities in connection with this issue, the agency on March 1, 1984 published a notice of proposed rule-making and a request for comments. A new regulations became effective on May 30, 1987, when employers were required to provide facilities as specified in 1928.110(c) (1). For compliance with requirements for the provision of toilet and handwashing facilities in accordance with 1928.110(c) (2), and for their maintenance in accordance with 1928.110(c) (3), the 1984 proposal specified that where eleven or more such field workers were employed, these facilities must be provided. The facilities used by farm workers at sites where fewer than eleven workers are employed is also a matter of great concern, for these workers also have a need for adequate clean sanitary facilities.

The success or failure of clean portable restroom facilities is dependent upon the availability of proper number of facilities and their proper usage. The limited capacity of these units creates the need for proper service on a scheduled basis.

This standard reflects the most up-to-date human engineering and state-of-the-art chemicals and procedures.

Suggestions for improvement of this standard will be welcome. They should be sent to the Portable Sanitation Association International, 7800 Metro Parkway - Suite 104, Bloomington, MN 55425.

Consensus for this standard was achieved by use of the Canvass Method.

The following organizations recognized as having an interest in the standardization of procedures and facilities were contacted prior to the approval of this standard. Inclusion in this list does not necessarily imply that the organizations concurred with the submittal of the standard to ANSI.

# American National Standard For Sanitation – In Fields And Temporary Labor Camps – Minimum Requirements

## 1 Scope and purpose

### 1.1 Scope

This standard prescribes minimum environmental health requirements for camps (whether temporary or permanent) for temporary labor that will include persons with or without their families employed in any occupation or work for which labor-force quarters are provided and for field sanitation.

### 1.2 Purpose

The purpose of this standard is to protect the health of persons residing in the camps for temporary labor and working in fields.

## 2 Referenced American National Standards

This standard is intended for use in conjunction with the following American National Standards. When these referenced standards are superseded by a revision approved by the American National Standards Institute, Inc. the latest revision shall apply.

ANSI Z4.3-2005, Sanitation - Nonsewered Waste Disposal Systems - Minimum Requirements

ANSI Z223.1-1992, National Fuel Gas Code

ANSI/ARI 1010-94, Drinking Fountains and Self-Contained, Mechanically Refrigerated Drinking Water Coolers

ANSI/NFPA 70-1993, National Electrical Code

## 3 Definitions

**3.1 Agricultural employer:** An agricultural employer is any person, corporation, association or

other legal entity that owns or operates an agricultural establishment or on whose premises or in whose interest an agricultural establishment is operated and any person, corporation, association or other legal entity that is responsible for the management and conditions of an agricultural establishment or that acts directly or indirectly in the interest of any employer in relation to any employee.

**3.2 Agricultural establishment:** An agricultural establishment is a business operation that uses paid employees in the production of food, fiber or other materials such as seed, seedlings, plants or parts of plants.

### 3.3 Authority

**3.3.1 Health authority:** The health authority is the federal, state or local health agency having jurisdiction.

**3.3.2 Other regulatory authority:** An other regulatory authority is a health and government authority that has jurisdiction as provided by law over the installation or maintenance, or both, of utilities, fire protection, plumbing and other sanitary services.

**3.4 Camp:** A camp is a tract of land, together with living quarters, service buildings and any appurtenances, established for the housing accommodation of a temporary labor force.

**3.5 Camp superintendent:** The camp superintendent is the person designated by the owner to be in charge of the camp.

**3.6 Communicable disease:** A communicable disease is any of those diseases that fall within the range of federal, state or local communicable disease laws, ordinances and regulations.

**3.7 Hand-labor operations:** Hand-labor operations are agricultural activities or operations performed by hand or with hand tools. Some examples of "hand-labor operations" are hand harvesting of vegetables, nuts and fruit and the hand planting, weeding, thinning, pruning, topping or roguing of crops. "Hand-labor" does not include such activities as logging or operations in permanent structures such as canning facilities, greenhouses or packing houses.

**3.8 Handwashing facility:** A handwashing facility is
