ASABE is a professional and technical organization, of members worldwide, who are dedicated to advancement of engineering applicable to agricultural, food, and biological systems. ASABE Standards are consensus documents developed and adopted by the American Society of Agricultural and Biological Engineers to meet standardization needs within the scope of the Society; principally agricultural field equipment, farmstead equipment, structures, soil and water resource management, turf and landscape equipment, forest engineering, food and process engineering, electric power applications, plant and animal environment, and waste management.

**NOTE:** ASABE Standards, Engineering Practices, and Data are informational and advisory only. Their use by anyone engaged in industry or trade is entirely voluntary. The ASABE assumes no responsibility for results attributable to the application of ASABE Standards, Engineering Practices, and Data. Conformity does not ensure compliance with applicable ordinances, laws and regulations. Prospective users are responsible for protecting themselves against liability for infringement of patents.

ASABE Standards, Engineering Practices, and Data initially approved prior to the society name change in July of 2005 are designated as "ASAE", regardless of the revision approval date. Newly developed Standards, Engineering Practices and Data approved after July of 2005 are designated as "ASABE".

Standards designated as "ANSI" are American National Standards as are all ISO adoptions published by ASABE. Adoption as an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by ASABE.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

**CAUTION NOTICE:** ASABE and ANSI standards may be revised or withdrawn at any time. Additionally, procedures of ASABE require that action be taken periodically to reaffirm, revise, or withdraw each standard.

No part of this publication may be reproduced in any form, including an electronic retrieval system, without the prior written permission of ASABE. All requests pertaining to the ASABE/ISO TS 28924:2007 SEP2015 standard should be submitted to ASABE.*

*This standard was reviewed for adoption by the ASABE Agricultural Machinery – Operator Comfort Technical subcommittee, and has been formerly approved by the Machinery Systems Division. Adopted by ASABE September 2015; approved as an American National Standard September 2015; editorial correction made in approval year of second listing of ASABE/ISO TS 28924:2007 found in 0.1 September 2016; reaffirmed December 2019.*

**Keywords:** Guards

## **0 Foreword**

**0.1** ASABE/ISO TS 28924:2007 SEP2015, Agricultural machinery — Guards for moving parts of power transmission — Guard opening without tool, is an adoption without modifications of the identically titled ISO technical specification ISO/TS 28924:2007, Agricultural tractors and machinery — Guards for moving parts of power transmission — Guard opening without tool.

**0.2** ASABE/ISO TS 28924:2007 SEP2015 gives safety requirements, and the means of verifying them, for the design and construction of guards, able to be opened without a tool, which are used to guard the moving parts of the power transmission of self-propelled ride-on machines and mounted, semi-mounted or trailed machines used in agriculture. In addition, it specifies the type of information on safe working practices (including residual risks) to be provided by the manufacturer.

**0.3** Two normative references are listed in ISO/TS 28924:2007. These references have been reviewed and accepted as part of the adoption of ASABE/ISO TS 28924:2007 SEP2015.

**0.4** This standard has been approved as an American National standard by ANSI (American National Standards Institute).

Text of ISO/TS 28924:2007 Agricultural machinery — Guards for moving parts of power transmission — Guard opening without tool, follows.

## **1 Scope**

This Technical Specification gives safety requirements, and the means of verifying them, for the design and construction of guards, able to be opened without a tool, which are used to guard the moving parts of the power transmission of self-propelled ride-on machines and mounted, semi-mounted or trailed machines used in agriculture. In addition, it specifies the type of information on safe working practices (including residual risks) to be provided by the manufacturer.
