Seismic Evaluation and Retrofit of Existing Buildings
Library of Congress Cataloging-in-Publication Data

Names: American Society of Civil Engineers.
Title: ASCE standard, ASCE/SEI, 41-17, seismic evaluation and retrofit of existing buildings.
Other titles: Seismic evaluation and retrofit of existing buildings.
Description: Reston, Virginia : American Society of Civil Engineers, 2017. l Includes bibliographical references and index.
Subjects: LCSH: Earthquake resistant design—Standards. l Buildings—Earthquake effects.
Classification: LCC TH1095 .A527 2017 | DDC 693.8/52021873–dc23
LC record available at https://lccn.loc.gov/2017047777

This standard was developed by a consensus standards development process that has been accredited by the American National Standards Institute (ANSI). Accreditation by ANSI, a voluntary accreditation body representing public and private sector standards development organizations in the United States and abroad, signifies that the standards development process used by ASCE has met the ANSI requirements for openness, balance, consensus, and due process.

While ASCE’s process is designed to promote standards that reflect a fair and reasoned consensus among all interested participants, while preserving the public health, safety, and welfare that is paramount to its mission, it has not made an independent assessment of and does not warrant the accuracy, completeness, suitability, or utility of any information, apparatus, product, or process discussed herein. ASCE does not intend, nor should anyone interpret, ASCE’s standards to replace the sound judgment of a competent professional, having knowledge and experience in the appropriate field(s) of practice, nor to substitute for the standard of care required of such professionals in interpreting and applying the contents of this standard.

ASCE has no authority to enforce compliance with its standards and does not undertake to certify products for compliance or to render any professional services to any person or entity.

ASCE disclaims any and all liability for any personal injury, property damage, financial loss, or other damages of any nature whatsoever, including without limitation any direct, indirect, special, exemplary, or consequential damages, resulting from any person’s use of, or reliance on, this standard. Any individual who relies on this standard assumes full responsibility for such use.

ASCE STANDARDS

In 2014, the Board of Direction approved revisions to the ASCE Rules for Standards Committees to govern the writing and maintenance of standards developed by ASCE. All such standards are developed by a consensus standards process managed by the ASCE Codes and Standards Committee (CSC). The consensus process includes balloting by a balanced standards committee, and reviewing during a public comment period. All standards are updated or reaffirmed by the same process every five to ten years. Requests for formal interpretations shall be processed in accordance with Section 7 of ASCE Rules for Standards Committees which are available at www.asce.org. Errata, addenda, supplements, and interpretations, if any, for this standard can also be found at www.asce.org.

This standard has been prepared in accordance with recognized engineering principles and should not be used without the user’s competent knowledge for a given application. The publication of this standard by ASCE is not intended to warrant that the information contained therein is suitable for any general or specific use, and ASCE takes no position respecting the validity of patent rights. The user is advised that the determination of patent rights or risk of infringement is entirely their own responsibility.

A complete list of currently available standards is available in the ASCE Library (http://ascelibrary.org/page/books/s-standards).
Tips for Using This Standard

The standards provisions are contained in chapters 1 to 18. Standard provisions are mandatory.

The standard commentary is contained in chapters C1 to C18. Standard commentary is intended to help the reader understand how provisions were determined and how to apply them.

Gray bars down the side in the provisions (but not the commentary) indicate sections with substantive changes (additions or deletions) from the previous edition of the standard, ASCE/SEI 41-13.

This standard uses both customary and metric (S.I.) units in parentheses. A customary units is presented like this: 3,000 ft². An S.I. units is presented like this: (280 m²).

Reference consensus standards are listed in Chapter 18, where they are listed by number with title, publisher, and year of publication. In text, they are mentioned only by number: ASTM A992/A992M, AWC SDPWS-2015, IEBC.

Reference citations are listed at in Chapter C18 in commentary, where they are listed by author and date with accompanying bibliographic information. In the text, these references are called out by author and date: ASME (2001a), Nims et al. (1993), ICBO (1994).

 Supplements, errata, and interpretations may become available in the future. Please check for important new materials at https://doi.org/10.1061/9780784414859.

## 1 GENERAL REQUIREMENTS

1.1 Scope ............................................................................................................................. 1

1.2 Definitions and Notations

1.2.1 Definitions .................................................................................................................. 1

1.2.2 Notations

1.2.2.1 Upper Case Notations .......................................................................................... 7

1.2.2.2 Lower-case Notations .......................................................................................... 14

1.2.2.3 Greek Notations .................................................................................................. 16

1.3 Evaluation and Retrofit Process .................................................................................. 19

1.4 Seismic Evaluation Process

1.4.1 Selection of Performance Objective ......................................................................... 19

1.4.2 Level of Seismicity .................................................................................................... 19

1.4.3 As-Built Information ................................................................................................ 19

1.4.4 Evaluation Procedures .............................................................................................. 19

1.4.5 Evaluation Report ..................................................................................................... 19

1.5 Seismic Retrofit Process

1.5.1 Initial Considerations .................................................................................................. 20

1.5.2 Selection of Performance Objective ......................................................................... 20

1.5.3 Level of Seismicity .................................................................................................... 20

1.5.4 As-Built Information ................................................................................................ 20

1.5.5 Retrofit Procedures .................................................................................................. 20

1.5.6 Retrofit Strategies ................................................................................................... 20

1.5.7 Retrofit Measures ..................................................................................................... 20

1.5.8 Verification of Retrofit Design .................................................................................. 20

1.5.9 Construction Documents .......................................................................................... 20

1.5.10 Construction Quality Assurance

1.5.10.1 Construction Quality Assurance Plan ................................................................. 20

1.5.10.2 Construction Quality Assurance Requirements .................................................. 20

1.5.10.3 Responsibilities of the Authority Having Jurisdiction ........................................ 21

## 2 PERFORMANCE OBJECTIVES AND SEISMIC HAZARDS.

2.1 Scope ............................................................................................................................. 23

2.2 Performance Objectives

2.2.1 Basic Performance Objective for Existing Buildings (BPOE) ..................................... 23

2.2.2 Enhanced Performance Objectives .......................................................................... 23

2.2.3 Limited Performance Objectives ............................................................................. 23

2.2.4 Basic Performance Objective Equivalent to New Building Standards (BPON) ........ 23

2.2.5 Partial Retrofit .......................................................................................................... 23

2.2.6 System-Specific Performance Procedures ............................................................... 23

2.3 Target Building Performance Levels .......................................................................... 23

2.3.1 Structural Performance Levels and Ranges .............................................................. 23
6 TIER 3 SYSTEMATIC EVALUATION AND RETROFIT

6.1 Scope .................................................................................................................. 59
6.2 Data Collection Requirements ........................................................................... 59
6.2.1 Minimum Data Collection Requirements .................................................. 59
6.2.2 Usual Data Collection Requirements ......................................................... 59
6.2.3 Comprehensive Data Collection Requirements ....................................... 59
6.2.4 Knowledge Factor ......................................................................................... 60
  6.2.4.1 General ................................................................................................. 60
  6.2.4.2 Linear Procedures ................................................................................ 60
  6.2.4.3 Nonlinear Procedures ......................................................................... 60
  6.2.4.4 Assumed Values of the Knowledge Factor ........................................ 60
6.3 Tier 3 Evaluation Requirements ........................................................................ 61
6.4 Tier 3 Retrofit Requirements ............................................................................. 61

5.8 Tier 2 Deiciency-Based Retrofit Requirements .............................................. 57
5.7 Procedures for Connections .............................................................................. 57
  5.7.1 Anchorage for Normal Forces .................................................................. 57
  5.7.1.1 Wall Anchorage .................................................................................. 57
  5.7.1.2 Stiffness of Wall Anchors .................................................................. 57
  5.7.1.3 Wood Ledgers with Cross-Grain Bending ......................................... 57
  5.7.1.4 Precast Concrete Panel Connections .............................................. 57
  5.7.2 Connections for Shear Transfer .................................................................. 57
  5.7.3 Connections for Vertical Elements ............................................................. 57
    5.7.3.1 Steel and Concrete Columns ............................................................... 57
    5.7.3.2 Shear Wall Boundary Columns .......................................................... 57
    5.7.3.3 Wood or Cold-Formed Steel Posts and Wood Sills and Cold-Formed
        Steel Base Tracks .................................................................................... 57
    5.7.3.4 Concrete Walls, Precast Wall Panels, and Other Wall Panels ........ 57
    5.7.3.5 Uplift at Pile Caps .............................................................................. 57
  5.7.4 Interconnection of Elements ....................................................................... 57
    5.7.4.1 Girdler–Column Connection ............................................................... 57
    5.7.4.2 Girdlers Supported by Walls or Pilasters ........................................ 57
    5.7.4.3 Corbel Bearing and Connections ..................................................... 57
    5.7.4.4 Beam, Girdler, and Truss Supported on Unreinforced Masonry (URM)
        Walls or URM Pilasters ........................................................................... 57
  5.7.5 Roof and Wall Panel Connections ................................................................ 57

5.6 Procedures for Diaphragms ................................................................................ 56
  5.6.1 General Procedures for Diaphragms .......................................................... 56
    5.6.1.1 Diaphragm and Roof Chord Continuity ......................................... 56
    5.6.1.2 Diaphragm Cross Ties ....................................................................... 56
    5.6.1.3 Openings in Diaphragms at Shear Walls, Braced Frames, and Moment
        Frames .................................................................................................... 56
    5.6.1.4 Plan Irregularities in Diaphragms ..................................................... 56
    5.6.1.5 Diaphragm Reinforcement at Openings ......................................... 56
  5.6.2 Procedures for Wood Diaphragms ............................................................... 56
  5.6.3 Procedures for Metal Deck Diaphragms ..................................................... 56
  5.6.4 Procedures for Precast Concrete Diaphragms .......................................... 56
  5.6.5 Diaphragms Other than Wood, Metal Deck, Concrete, or Horizontal Bracing.
    .................................................................................................................... 57

5.5.4 Procedures for Braced Frames ...................................................................... 55
  5.5.4.1 Axial Stress Check ............................................................................. 55
  5.5.4.2 Column Splices ................................................................................... 55
  5.5.4.3 Slenderness of Diagonals .................................................................... 55
  5.5.4.4 Connection Strength ........................................................................... 55
  5.5.4.5 Out-of-Plane Restraint for Braced Frames ........................................ 56
  5.5.4.6 K-Bracing and Chevron-Bracing Configurations .............................. 56
  5.5.4.7 Tension-Only Braces ......................................................................... 56
  5.5.4.8 Concentrically Braced Frame Joints .................................................. 56

5.5.3.9 Procedures for Cold-Formed Steel Light-Frame Construction, Strap-Braced
    Wall Systems ............................................................................................... 56
  5.5.3.8 Procedures for Cold-Formed Steel Light-Frame Construction, Shear
    Wall Systems ............................................................................................... 56
  5.5.3.7 Procedures for Cold-Formed Steel Light-Frame Construction, Shear
    Wall Systems ............................................................................................... 56
  5.5.3.6 Procedures for Walls in Wood Frame Buildings .................................. 55
  5.5.3.5 Procedures for Infill Walls in Frames ............................................... 55
  5.5.3.4 Procedures for Unreinforced Masonry Shear Walls ........................... 55

5.5.2 Procedures for Frame Systems ....................................................................... 55
  5.5.2.1 Axial Stress Check ............................................................................. 55
  5.5.2.2 Column Splices ................................................................................... 55
  5.5.2.3 Slenderness of Diagonals .................................................................... 55
  5.5.2.4 Connection Strength ........................................................................... 55
  5.5.2.5 Out-of-Plane Restraint for Frames ..................................................... 56

5.5.1 Procedures for Structural Systems ............................................................... 55
  5.5.1.1 Axial Stress Check ............................................................................. 55
  5.5.1.2 Column Splices ................................................................................... 55
  5.5.1.3 Slenderness of Diagonals .................................................................... 55
  5.5.1.4 Connection Strength ........................................................................... 55
  5.5.1.5 Out-of-Plane Restraint for Structural Systems ................................. 56

5.4 Procedures for Connections .............................................................................. 55
  5.4.1 Axial Stress Check ..................................................................................... 55
  5.4.2 Column Splices ........................................................................................... 55
  5.4.3 Slenderness of Diagonals ......................................................................... 55
  5.4.4 Connection Strength ................................................................................ 55
  5.4.5 Out-of-Plane Restraint for Connections .................................................. 56

5.3 Procedures for Seismic Systems ....................................................................... 55
  5.3.1 Axial Stress Check .................................................................................... 55
  5.3.2 Column Splices ........................................................................................ 55
  5.3.3 Slenderness of Diagonals ......................................................................... 55
  5.3.4 Connection Strength ................................................................................ 55
  5.3.5 Out-of-Plane Restraint for Seismic Systems .......................................... 56

5.2 Procedures for Connections .............................................................................. 55
  5.2.1 Axial Stress Check ................................................................................... 55
  5.2.2 Column Splices ........................................................................................ 55
  5.2.3 Slenderness of Diagonals ......................................................................... 55
  5.2.4 Connection Strength ................................................................................ 55

5.1 Procedures for Structural Systems .................................................................. 55
  5.1.1 Axial Stress Check ................................................................................... 55
  5.1.2 Column Splices ........................................................................................ 55
  5.1.3 Slenderness of Diagonals ......................................................................... 55
  5.1.4 Connection Strength ................................................................................ 55
7 ANALYSIS PROCEDURES AND ACCEPTANCE CRITERIA

7.1 Scope ........................................................................ 63
7.2 General Analysis Requirements ................................................ 63
7.2.1 Analysis Procedures ..................................................... 63
7.2.2 Component Gravity Loads and Load Combinations ....................... 63
7.2.3 Mathematical Modeling .................................................. 63
  7.2.3.1 Basic Assumptions .................................................. 63
  7.2.3.2 Torsion .............................................................. 63
  7.2.3.3 Primary and Secondary Components ......................... 64
  7.2.3.4 Stiffness and Strength Assumptions ......................... 64
  7.2.3.5 Foundation Modeling ............................................. 64
  7.2.3.6 Damping ......................................................... 64
7.2.4 Configuration .......................................................... 65
7.2.5 Multidirectional Seismic Effects ......................................... 65
  7.2.5.1 Concurrent Seismic Effects ..................................... 65
  7.2.5.2 Vertical Seismic Effects ......................................... 65
7.2.6 P-Δ Effects .............................................................. 65
7.2.7 Soil–Structure Interaction ............................................... 65
7.2.8 Overturning .............................................................. 66
  7.2.8.1 Overturning Effects for Linear Procedures ..................... 66
  7.2.8.2 Overturning Effects for Nonlinear Procedures ............... 66
7.2.9 Diaphragms, Chords, Collectors, and Ties .................................. 66
  7.2.9.1 Classification of Diaphragms .................................... 66
  7.2.9.2 Mathematical Modeling ........................................ 66
  7.2.9.3 Diaphragm Chords ................................................ 67
  7.2.9.4 Diaphragm Collectors ........................................... 67
  7.2.9.5 Diaphragm Ties ................................................... 67
7.2.10 Continuity ............................................................... 67
7.2.11 Structural Walls and Their Anchorage .................................... 67
  7.2.11.1 Out-of-Plane Wall Anchorage to Diaphragms ............... 67
  7.2.11.2 Out-of-Plane Strength of Walls ............................... 68
7.2.12 Structures Sharing Common Elements .................................. 68
  7.2.12.1 Interconnection .................................................. 68
  7.2.12.2 Separation ....................................................... 68
7.2.13 Building Separation .................................................... 68
  7.2.13.1 Minimum Separation ........................................... 68
  7.2.13.2 Separation Exceptions ......................................... 69
7.2.14 Verification of Analysis Assumptions ................................... 69
7.3 Analysis Procedure Selection .............................................. 69
7.3.1 Linear Procedures ...................................................... 69
  7.3.1.1 Method to Determine Limitations on Use of Linear Procedures . 69
  7.3.1.2 Limitations on Use of the Linear Static Procedure ........... 70
7.3.2 Nonlinear Procedures .................................................. 70
  7.3.2.1 Nonlinear Static Procedure (NSP) ............................ 70
  7.3.2.2 Nonlinear Dynamic Procedure (NDP) ......................... 70
7.3.3 Alternative Rational Analysis .......................................... 70

    9.3.1 Stiffness ........................................................... 105
      9.3.1.1 Use of Linear Procedures for Cold-Formed Steel Light-Frame Construction .. 105
      9.3.1.2 Use of Nonlinear Procedures for Cold-Formed Steel Light-Frame Construction ... 105
    9.3.2 Strength and Acceptance Criteria ............................ 105
      9.3.2.1 General ....................................................... 105
      9.3.2.2 Deformation-Controlled Actions ....................... 105
      9.3.2.3 Force-Controlled Actions .................................. 106
      9.3.2.4 Anchorage to Concrete .................................... 106
  9.3.3 Connection Requirements in Cold-Formed Steel Light-Frame Construction ............ 106
    9.3.3.1 General ....................................................... 106
    9.3.3.2 Use of Nonlinear Procedures for Cold-Formed Steel Light-Frame Construction . 106
  9.3.4 Components Supporting Discontinuous Shear Walls in Cold-Formed Steel Light-Frame Construction ................................................................. 106
    9.3.4.1 General ....................................................... 106
    9.3.4.2 Use of Nonlinear Procedures for Cold-Formed Steel Light-Frame Construction . 106
  9.3.5 Retrofit Measures .................................................. 106
    9.3.5.1 Retrofit Measures for Structural Steel .................... 106
    9.3.5.2 Retrofit Measures for Cold-Formed Steel Light-Frame Construction ............. 106
  9.4 Steel Moment Frames .................................................. 106
  9.4.1 General ............................................................. 106
  9.4.2 Fully Restrained (FR) Moment Frames ......................... 106
    9.4.2.1 General ....................................................... 106
    9.4.2.2 Stiffness of FR Moment Frames ......................... 107
    9.4.2.3 Strength of FR Moment Frames ......................... 109
    9.4.2.4 Acceptance Criteria for FR Moment Frames .......... 110
    9.4.2.5 Retrofit Measures for FR Moment Frames ............. 121
  9.4.3 Partially Restrained (PR) Moment Frames ....................... 124
    9.4.3.1 General ....................................................... 124
    9.4.3.2 Stiffness of PR Moment Frames ............................ 124
    9.4.3.3 Strength of PR Moment Frames ............................ 124
    9.4.3.4 Acceptance Criteria for PR Moment Frames .......... 124
    9.4.3.5 Retrofit Measures for PR Moment Frames ................ 124
  9.5 Steel Braced Frames ................................................... 124
  9.5.1 General ........................................................... 124
  9.5.2 Concentrically Braced Frames .................................... 125
    9.5.2.1 General ....................................................... 125
    9.5.2.2 Stiffness of Concentrically Braced Frames .......... 125
    9.5.2.3 Strength of Concentrically Braced Frames .......... 125
    9.5.2.4 Acceptance Criteria for Concentrically Braced Frames .......... 125
    9.5.2.5 Retrofit Measures for Concentrically Braced Frames ...... 126
  9.5.3 Eccentrically Braced Frames ...................................... 126
    9.5.3.1 General ....................................................... 126
    9.5.3.2 Stiffness of Eccentrically Braced Frames ............ 126
    9.5.3.3 Strength of Eccentrically Braced Frames .......... 126
    9.5.3.4 Acceptance Criteria for Eccentrically Braced Frames ............ 127
    9.5.3.5 Retrofit Measures .......................................... 127
  9.5.4 Buckling-Restrained Braced Frames .............................. 127
    9.5.4.1 General ....................................................... 127
    9.5.4.2 Stiffness of Buckling-Restrained Braced Frames ...... 127
    9.5.4.3 Strength of Buckling-Restrained Braced Frames ...... 127
    9.5.4.4 Acceptance Criteria for Buckling-Restrained Braced Frames ............ 128
    9.5.4.5 Retrofit Measures for Buckling-Restrained Braced Frames ..................... 128
