ANS X9.104-2:2004 (R2011)

Foreword

This part of X9.104 provides examples of common messages in the convenience store/petroleum marketing industry and its component business operations. It defines data elements and code values used in the messages and explanations of common business practices.

ANSI X9.104 consists of the following parts, under the general title *Financial transaction messages - Card acceptor to acquiring host messages:*

- Part 1: Messages, data elements and code values
- Part 2: Convenience store and petroleum marketing industry examples

Subsequent parts may be published to define card acceptor to acquiring host messages for other industries.

To aid clarity the following conventions are followed within this part of X9.104.

- Data element names have the first letter capitalized
- Data element names are shown in italics except when used in tables or figures.

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretation should be addressed to the secretariat or sponsor whose name appears on the title page of this part of X9.104.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to reaffirm, revise, or withdraw this part of X9.104 no later than five years from the date of approval.

Introduction

The National Association of Convenience Stores (NACS) convened its Payment Systems Committee as part of an overall Technology Standards Project in November 1995. Among the first priorities of that Committee was to consider development of a common format for all payment messages. Although there was strong sentiment for a possible standard for messages flowing from the card acceptor to the ensuing host processing system, the NACS Committee determined that existing standards did not serve this purpose. Therefore, NACS convened a working group within X9A to develop a set of guidelines based on the international acquirer to issuer standard, ISO 8583: 1993, specifically designed for the convenience store and petroleum marketing industry. That guidance document was adopted by X9 in 1999. ASC X9-TG23-1999 Implementation guide for ISO 8583-based card acceptor to host messages – Part 1: Convenience store and petroleum marketing industry (TG-23).

Despite Y2K and the economic downturn, a number of implementations of TG-23 have been documented. However, because TG-23 was based on ISO 8583, and that international standard was undergoing its five-year review process, many others interested in adopting TG-23 were inclined to delay significant implementation efforts pending the update of the base standard. In 2003, *ISO 8583-1: Financial transaction card originated messages – Interchange message specifications – Part 1: Messages, data elements and code values was published.* To enable TG-23 to remain aligned with ISO 8583, a generic terminal-to-host standard, ASC X9.104, was created. It replaces in whole X9-TG23-1999 and incorporates the updated ISO 8583-1 to create a common format for payment messages flowing from the card acceptor to the acquiring host. During the discussions leading up to this project, it was agreed that one of the most valuable aspects of TG-23 was the examples it contained of terminal-to-host messaging in the convenience and petroleum marketing environment. Consequently, it was decided to retain and update those examples and place them in a separate part of the new standard. Accordingly, this Part 2 of X9.104 defines specific examples of messages used in the convenience store and petroleum marketing industry. Subsequent parts may be published to define card acceptor–to-acquirer messages for other retail industries.

NOTE: The user's attention is called to the possibility that compliance with this part of X9.104 may require use of an invention covered by patent rights.

By publication of this part of X9.104, no position is taken with respect to the validity of any such claim or of any patent rights in connection therewith. However, no patent holder has, filed a notice of any rights nor provided the statement of willingness to grant a license under these rights on reasonable and non-discriminatory terms and conditions to applicants desiring to obtain such a license, as required by the ANSI patent policy. Further details on the patent situation may be obtained from the standards developer.

Suggestions for the improvement or revision of this part of X9.104 are welcome. They should be sent to the X9 Committee Secretariat, Accredited Standards Committee X9, Inc., Financial Industry Standards, 1212 West Street, Suite 200, Annapolis, MD 21401 USA.

This part of X9.104 was processed and approved for submittal to ANSI by the Accredited Standards Committee on Financial Services, X9. Committee approval of the Standard does not necessarily imply that all the committee members voted for its approval.

At the time of this standard's reaffirmation, the X9 committee had the following Principal members:

Roy DeCicco, X9 Chairman Claudia Swendseid, X9 Vice-Chairman Cynthia Fuller, Executive Director Janet Busch, Program Manager Rick Van Luvender

Under ASC X9, Inc. procedures, a working group may be established to address specific segments of work under the ASC X9 Committee or one of its subcommittees. A working group exists only to develop standard(s) or guideline(s) in a specific area and is then disbanded. The individual experts are listed with their affiliated organizations. However, this does not imply that the organization has approved the content of the standard or guideline. (Note: Per X9 policy, company names of non-member participants are listed only if, at the time of publication, the X9 Secretariat received an original signed release permitting such company names to appear in print.)

The X9A12 POS/Host Transaction Message Working Group which developed this part of X9.104 in 2004 had the following members:

Brad McGuiness, Chairman and Co-Convenor John Hervey, Co-Convenor Bonnie L. Howard, Project Editor

The National Association of Convenience Stores also contributed to the preparation of the document.

This document cancels and replaces ASC X9-TG-23-Part 1-1999 in whole.

X9.104-1:2011 Financial transaction card originated messages – Card acceptor to acquiring host messages – Part 1: Messages, data elements and code values includes a description of significant technical changes to messages that are reflected in the examples in this part of X9.104.

Financial transaction card originated messages – Card acceptor to acquiring host messages - Part 2: Convenience store and petroleum marketing industry

1 Scope

This part of X9.104 provides example of messages used in the convenience store and petroleum marketing industry based on the message formats defined in X9.104 part 1. This part of X9.104 also defines data elements and code values for use in this environment.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ANSI X9.104-Part 1:2011, Financial transaction card originated messages – Card acceptor to acquiring host messages

ISO 8583:2003 (all parts), Financial transaction card originated messages – Interchange message specifications

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 8583, X9.104-Part 1 and the following apply.

3.1

bill payment

a financial transaction where the payor (cardholder) makes a payment on a bill, e.g., a utility bill, to a payee.

3.2

fleet card

a card issued for use by a driver of a company owned vehicle to report information regarding motor fuel and related purchases.

3.3

postpay

A payment for fuel services made after the fuel has been dispensed.

3.4

prepay

A payment for fuel service prior to dispensing the fuel.

3.5

stored value

a payment vehicle that contains some means of storing information e.g., magnetic stripe, bar code, RFID transponder or chip. Stored value cards may also be referred to as an electronic purse or a prepaid card.

4 Symbols and abbreviated terms

Abbreviations when used within this part of X9.104 have the following meanings:

- EBT: electronic benefits transfer;
- ICC: integrated circuit card;
