ANSI X9.100-150-2010

Foreword

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretation should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of approval.

Introduction

NOTE The user's attention is called to the possibility that compliance with this standard may require use of an invention covered by patent rights.

By publication of this standard, no position is taken with respect to the validity of this claim or of any patent rights in connection therewith. The patent holder has, however, filed a statement of willingness to grant a license under these rights on reasonable and nondiscriminatory terms and conditions to applicants desiring to obtain such a license. Details may be obtained from the standards developer.

This publication addresses check carrier envelopes (carriers) only, and describes the requirements and specifications established for their use in the paper-based financial payment transaction system.

Several approaches exist for satisfying the need for carrier envelopes. Users must select the method that best meets their applications. Different applications have been identified in the system that may require the use of a carrier.

1. If the paper has been damaged during the collection cycle or the MICR is not present or machine readable, a carrier may be used as a means of carrying the document in the mechanized MICR collection system so that it can still be processed with high speed equipment. Under this system, the applicable MICR data from the document must be encoded on the carrier. Full field encoding is encouraged in order to reduce rejects in the system. Care must be taken that the encoded data is accurate.
2. If the original paper document is not processable in a digitized image handling system, a carrier can be used to permit processing by that system. In this case, the entire front and back of the original payment document must be visible to the image camera when the item is processed. However, the translucent front and back sheet of the carrier will deteriorate the scanned image quality.

There are two annexes in this standard. Both annexes are informative and are not considered part of this standard.

Suggestions for the improvement or revision of this Standard are welcome. They should be sent to the X9 Committee Secretariat, Accredited Standards Committee X9, Inc., Financial Industry Standards, 1212 West Street, Suite 200, Annapolis, MD 21401 USA.

This Standard was processed and approved for submittal to ANSI by the Accredited Standards Committee on Financial Services, X9. Committee approval of the Standard does not necessarily imply that all the committee members voted for its approval.

At the time this standard was approved, the X9 committee had the following members:

Roy C. DeCicco, X9 Chairman
Vincent DeSantis X9 Vice Chairman
Cynthia L. Fuller, Executive Director
Janet Busch, Managing Director

Under ASC X9, Inc. procedures, a working group may be established to address specific segments of work under the ASC X9 Committee or one of its subcommittees. A working group exists only to develop standard(s) or guideline(s) in a specific area and is then disbanded. The individual experts are listed with their affiliated organizations. However, this does not imply that the organization has approved the content of the standard or guideline. (Note: Per X9 policy, company names of non-member participants are listed only if, at the time of publication, the X9 Secretariat received an original signed release permitting such company names to appear in print.)

At the time this standard was approved, the **X9AB13 Damaged and Mutilated Checks group**, which developed this standard, had the following active members:

David Hunt, Chairman, BancTec Inc.

Organization Represented	Representative
All My Papers.....	Larry Krummel
Bank of America	Tony England
Bank of America	Daniel Welch

American National Standard for Financial Services Check Carrier Envelope Specifications

1 Scope

This Standard covers design considerations applying to carriers used for forward transit items, return items, and other bank interchange purposes.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the specific edition cited applies. For undated references, the most recent edition for the referenced document (including any amendments) applies.

ANSI X9.100-10, *Paper Specifications for MICR Documents*

ANSI X9.100-20 (X9.27), *Print and Test Specifications for Magnetic Ink Printing (MICR)*

ANSI X9.100-30 (X9.7), *Optical Background Measurement Specifications for MICR Documents*

ANSI X9.100-160-1, *Magnetic Ink Printing (MICR), Part 1: Placement and Location*

ANSI X9.100-160-2, *Magnetic Ink Printing (MICR), Part 2: EPC Field Use*
