ASME SECTION I PED GUIDE

**Supplement to Guide for ASME Stamp Holders
Use of ASME Section I to Meet the
EC Pressure Equipment Directive (97/23/EC)**

Date of Issuance: May 27, 2005

This report was prepared as an account of work sponsored by the American Society of Mechanical Engineers Mechanical (ASME) and the ASME Standards Technology, LLC (ST-LLC).

Neither ASME, ASME ST-LLC, nor others involved in the preparation or review of this report, nor any of their respective employees, members, or persons acting on their behalf, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe upon privately owned rights.

Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise does not necessarily constitute or imply its endorsement, recommendation, or favoring by the ASME ST-LLC or others involved in the preparation or review of this report, or any agency thereof. The views and opinions of the authors, contributors, reviewers of the report expressed herein do not necessarily reflect those of the ASME ST-LLC or others involved in the preparation or review of this report, or any agency thereof.

The ASME ST-LLC does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a bulletin against liability for infringement of any applicable Letters Patent, nor assumes any such liability. Users of a publication are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this report or publication.

FOREWORD

ASME has received requests from all over the world to provide guidance to manufacturers who have been or will be impacted by the European PED Reference[1]. The result was the publication of the "ASME Guide for ASME Stamp Holders on Using Section VIII, Division 1 to meet the EC Pressure Equipment Directive." [2] Now, this guide provides information to manufacturers who want to use ASME Section I, Power Boilers to meet the PED.

Established in 1880, the American Society of Mechanical Engineers (ASME) is a 120,000 member professional not-for-profit organization focused on technical, educational and research issues of the engineering and technology community. ASME conducts one of the world's largest technical publishing operations, holds numerous technical conferences worldwide, and offers hundreds of professional development courses each year. ASME maintains and distributes 600 Codes and Standards used around the world for the design, manufacturing and installation of mechanical devices. Visit www.asme.org for more information.

The ASME Standards Technology, LLC (ASME ST-LLC) is a not-for-profit Limited Liability Company, with ASME as the sole member, formed in 2004 to carry out work related to newly commercialized technology, expanding upon the former role of ASME's Codes and Standards Technology Institute (CSTI). The ASME ST-LLC mission includes meeting the needs of industry and government by providing new standards-related products and services, which advance the application of emerging and newly commercialized science and technology and providing the research and technology development needed to establish and maintain the technical relevance of codes and standards. Visit www.stllc.asme.org for more information.

ABSTRACT

This guide is intended as a supplement for ASME stamp holders using ASME Boiler and Pressure Vessel Code (BPVC) Section I [3] as the basis for conformity with the European Commission (EC) Pressure Equipment Directive (PED), 97/23/EC[1]. This guide provides a comprehensive review of the PED and ASME Section I.

Manufacturers of Section I boilers will find this supplement, combined with the existing guide [2], to be useful tools when working with a Notified Body (NB) toward compliance with the PED and applying CE marking to their products.

This supplement is intended to be used in combination with the existing guide[2], which contains an explanation of the European New Approach, and continues with the goals of the PED and a description of its scope of coverage. Then, the existing guide goes into an in-depth analysis of the PED's concept of hazard categories and the various combinations of conformity assessment modules that can be used for each hazard category. Then, each of the PED Essential Safety Requirements (ESR) are covered, including materials, use of notified bodies, and requirements for CE marking. Those aspects are not reproduced in this supplement, as they are generic to all pressure equipment under the PED.

In this supplement, the reader is presented with some general guidance and updates on PED issues critical to ASME stamp holders. The majority of the supplement consists of a detailed comparison of the technical requirements of the PED with Section I, followed by a modified version of an "Annex ZA" for Section I. This Annex ZA provides instructions regarding what additional tasks must be completed to meet the administrative requirements of the PED.
