Approved April 25, 2017

American National Standards Institute, Inc.
American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer. Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution. The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he/she has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards. The American National Standards Institute does not develop standards and will in no circumstance give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretation should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.
Foreword  (This Foreword is not part of American National Standard Z15.1-2017)

This standard is a revision of the existing standard, which was originally published in 2006. It is one of an expected series of safety standards addressing motor vehicle operations. It is expected that these standards serve as a guide to organizations with vehicle operations.

This standard is not intended to serve as a guide to governmental authorities having jurisdiction over subjects within the scope of the Z15 Accredited Standards Committee (ASC).

Revisions: The Z15 Committee welcomes proposals for revisions to this standard. Revisions are made to the standard periodically (usually five years from the date of the standard) to incorporate changes that appear necessary or desirable, as demonstrated by experience gained from the application of the standard. Proposals should be as specific as possible, citing the relevant paragraph number(s), the proposed wording, and the reason for the proposal. Pertinent documentation would enable the Z15 Committee to process the changes in a more-timely manner.

Interpretations: Upon a request in writing to the Secretariat, the Z15 Committee will render an interpretation of any requirement of the standard. The request for interpretation should be clear, citing the relevant paragraph number(s) and phrased as a request for a clarification of a specific requirement. Oral interpretations are not provided.

Only the Z15 Committee (through the Z15 Secretariat) is authorized to provide any interpretation of this standard.

Approval: Neither the Z15 Committee nor American National Standards Institute (ANSI) approves, certifies, rates or endorses any item, construction, proprietary device or activity.

Appendices: Appendices are included in most standards to provide the user with additional information related to the subject of the standard. Appendices are not part of the approved standard.

Committee Meetings: The Z15 Committee meets on a regular basis. Persons wishing to attend a meeting should contact the Secretariat for information.

Standard Approval: This standard was processed and approved for submittal to ANSI by the American National Standards Committee on Motor Vehicle Fleet Operations. Approval of the standard does not necessarily imply (nor is it required) that all committee members voted for its approval. At the time this standard was published, the Z15 Committee had the following members:

1. Scope.

This standard sets forth practices for the safe management and operation of motor vehicles owned or operated by organizations, including:

- definitions
- management, leadership and administration
- operational environment
- driver considerations
- vehicle considerations
- incident reporting and analysis

These practices are designed for use by those having the responsibility for the administration and operation of motor vehicles for organizational business.

1.2 Purpose and Application.

The purpose of this standard is to provide organizations with a document for the development of policies, procedures and management processes to control risks associated with the operation of motor vehicles. It is not intended to be a mandate for its use; it has been developed to assist organizations in defining and developing an effective safety and risk management program.

This standard applies to licensed motor vehicles designed to be operated primarily on public roads.

This standard applies to the operation of organization-owned or leased vehicles, whether the vehicle is being driven on organizational business or for personal use; and the operation of rental or driver-owned vehicles for organizational purposes. It applies to persons working on behalf of the

E1.2 Licensed motor vehicles designed primarily for use on public roads may also be operated off the road. This standard also applies to off-road use of such vehicles.
