American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer. Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution. The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he/she has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards. The American National Standards Institute does not develop standards and will in no circumstance give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretation should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword (This Foreword is not a part of American National Standard A10.44-2020.)

This standard is one of a series of safety standards that have been formulated by the Accredited Standards Committee on Safety in Construction and Demolition Operations, A10. It is expected that the standards in the A10 series will find a major application in industry, serving as a guide to contractors, labor and equipment manufacturers. For the convenience of users, a list of existing and proposed standards in the A10 series for Safety Requirements in Construction and Demolition Operations follows.

| | |
|--------|---|
| A10.1 | Pre-Project & Pre-Task Safety & Health Planning |
| A10.2 | Safety, Health and Environmental Training (under development) |
| A10.3 | Powder-Actuated Fastening Systems |
| A10.4 | Personnel Hoists and Employee Elevators |
| A10.5 | Material Hoists |
| A10.6 | Demolition Operations |
| A10.7 | Use, Storage, Handling and Site Movement of Commercial Explosives and Blasting Agents |
| A10.8 | Scaffolding |
| A10.9 | Concrete and Masonry Construction |
| A10.10 | Temporary and Portable Space Heating Devices |
| A10.11 | Personnel Nets |
| A10.12 | Excavation |
| A10.13 | Steel Erection |
| A10.15 | Dredging |
| A10.16 | Tunnels, Shafts and Caissons |
| A10.17 | Safe Operating Practices for Hot Mix Asphalt (HMA) Construction |
| A10.18 | Temporary Roof and Floor Holes, Wall Openings, Stairways and Other Unprotected Edges |
| A10.19 | Pile Installation and Extraction Operations |
| A10.20 | Ceramic Tile, Terrazzo and Marble Work |
| A10.21 | Safe Construction and Demolition of Wind Generation/Turbine Facilities |
| A10.22 | Rope-Guided and Non-Guided Workers' Hoists |
| A10.23 | Safety Requirements for the Installation of Drilled Shafts |
| A10.24 | Roofing – Safety Requirements for Low-Sloped Roofs |
| A10.25 | Sanitation in Construction |
| A10.26 | Emergency Procedures for Construction Sites |
| A10.27 | Hot Mix Asphalt Facilities |
| A10.28 | Work Platforms Suspended from Cranes or Derricks |
| A10.29 | Aerial Platforms in Construction (under development) |
| A10.30 | Installation of Anchors and Micropiles (under development) |
| A10.31 | Digger-Derricks |
| A10.32 | Personal Fall Protection Used in Construction and Demolition Operations |
| A10.33 | Safety and Health Program Requirements for Multi-Employer Projects |
| A10.34 | Public Protection |
| A10.35 | Pressure Testing of Steel and Copper Piping Systems (under development) |
| A10.37 | Debris Nets |
| A10.38 | Basic Elements of a Program to Provide a Safe and Healthful Work Environment |
| A10.39 | Construction Safety and Health Audit Program |
| A10.40 | Reduction of Musculoskeletal Problems in Construction |
| A10.42 | Rigging Qualifications and Responsibilities in the Construction Industry |
| A10.43 | Confined Spaces in Construction and Demolition Operations |
| A10.44 | Lockout/Tagout in Construction and Demolition Operations |
| A10.46 | Hearing Loss Prevention |
| A10.47 | Highway Construction Safety |
| A10.48 | Communication Structures |
| A10.49 | Control of Health Hazards |

One purpose of these standards is to serve as guides to governmental authorities having jurisdiction over

subjects within the scope of the A10 Committee standards. If these standards are adopted for governmental use, the reference of other national codes or standards in individual volumes may be changed to refer to the corresponding regulations.

Normative Requirements: This standard uses the single column format common to many international standards. The normative requirements appear aligned to the left margin. To meet the requirements of this standard, machinery, equipment and process suppliers and users must conform to these normative requirements. These requirements typically use the verb "shall."

Revisions: The A10 Committee welcomes proposals for revisions to this standard. Revisions are made to the standard periodically (usually five years from the date of the standard) to incorporate changes that appear necessary or desirable, as demonstrated by experience gained from the application of the standard. Proposals should be as specific as possible, citing the relevant section number(s), the proposed wording and the reason for the proposal. Pertinent documentation would enable the A10 Committee to process the changes in a more-timely manner.

Interpretations: Upon a request in writing to the Secretariat, the A10 Committee will render an interpretation of any requirement of the standard. The request for interpretation should be clear, citing the relevant section number(s) and phrased as a request for a clarification of a specific requirement. Oral interpretations are not provided.

No one but the A10 Committee (through the A10 Secretariat) is authorized to provide any interpretation of this standard.

Approval: Neither the A10 Committee nor American National Standards Institute (ANSI) approves, certifies, rates or endorses any item, construction, proprietary device or activity.

Appendices: Appendices are included in most standards to provide the user with additional information related to the subject of the standard. Appendices are not part of the approved standard.

Checklists: Checklists included in A10 standards may be copied and used in non-commercial settings only.

Committee Meetings: The A10 Committee meets twice per year. Persons wishing to attend a meeting should contact the Secretariat for information.

Standard Approval: This standard was processed and approved for submittal to ANSI by the American National Standards Committee on Safety in Construction and Demolition Operations, A10. Approval of the standard does not necessarily imply (nor is it required) that all Committee members voted for its approval. At the time ANSI approved this standard, the A10 Committee had the following members:

John Johnson, CSP, Chair
Steven Rank, Vice Chair
Timothy R. Fisher, CSP, CHMM, ARM, CPEA, CAE, STS, Secretary
Lauren Bauerschmidt, MS Engr, CSP, STS, Assistant Secretary
Jennie Dalesandro, Administrative Technical Support

AMERICAN NATIONAL STANDARD A10.44 CONTROL OF ENERGY SOURCES (LOCKOUT/TAGOUT) FOR CONSTRUCTION AND DEMOLITION OPERATIONS

1. Scope and Purpose

1.1 Scope

This standard establishes the minimum requirements for the control of energy sources to prevent release of harmful energy that could cause death, injury or illness to personnel performing construction and demolition work.

This standard does not cover the following:

Installations under the exclusive control of electric utilities for the purpose of power generation, transmission and distribution, including related equipment for communication or metering; exposure to electrical hazards from work on, near or with conductors or equipment in electric utilization installations.

1.2 Purpose

The purpose of this standard is to establish procedures for the protection of property and personnel from injury due to the:

- unexpected energization;
- start-up;
- inadequate insulation;
- inadequate isolation; or
- release of active or stored energy

of machines, equipment, vehicles, tools, etc. in, on or around machines, tools or equipment during repair, maintenance, servicing, installation, testing and associated construction and demolition activities.

The purpose is to ensure that before any worker services, maintains, works on or near equipment where the potential exists for exposure to un-isolated energy or unexpected energization, start-up of equipment or the release of stored energy, that the machine, equipment, vehicles or tools, etc. is isolated from the energy source and rendered inoperative.

2. Definitions

Affected Employee. An affected employee is one whose job requires them to operate or use a machine or equipment on which servicing or maintenance is being performed under lockout or tagout, or whose job requires them to work in an area in which such servicing or maintenance is being performed.

Authorized Employee. A qualified person authorized by their employer to lockout and/or tagout (LOTO) machines or equipment in order to perform servicing or maintenance on a machine or piece of equipment, which has a source(s) of energy that can cause injury to the worker. Furthermore, any worker who implements a lockout and/or tagout system procedural element on machines or equipment (for servicing or maintenance purposes) is considered an authorized employee. This includes employees who:

1. perform energy isolation;
2. implement lockout and/or tagout on machines or equipment;
3. dissipate potential (stored) energy;
4. verify energy isolation;
