Collaborative business relationship management systems — Requirements and framework
This British Standard is the UK implementation of ISO 44001:2017. It supersedes BS 11000-1:2010 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee SVS/1/4, Collaborative business relationships.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Project Committee ISO/PC 286, Collaborative business relationship management – Framework.
Introduction

The aim of this document is to establish the requirements of a strategic lifecycle framework to improve collaborative business relationships in and between organizations of all sizes. Collaborative business relationships in the context of this document can be multidimensional (see Figure 1). They can be one-to-one relationships or networked relationships involving multiple parties.

Figure 1 — Multidimensional relationships

While this document principally addresses the management system of an organization, it also recognizes that effective collaboration requires two or more organizations to engage together and that management systems need to accommodate the joint activities of the parties.

In addition to addressing the overall requirements to establish a management system, this document addresses operational process requirements for specific or individual organizational relationship engagement (see Clause 8). This document also contains a number of informative annexes to assist the user. Annex A provides a checklist to assist organizations to implement and meet the requirements of this document.

Figure 2 illustrates the relationship between clauses of this document and the organization's systems and processes.

The framework addresses a number of themes that cascade from the high level management system and will vary within the context and maturity of a specific relationships lifecycle. These evolving themes impact the behaviour and organizational culture of collaborating organizations to ensure they are effective, optimized and deliver enhanced benefit to the stakeholders through collaborative approaches.

Collaborative business relationship management systems — Requirements and framework

1 Scope

This document specifies requirements for the effective identification, development and management of collaborative business relationships within or between organizations.

This document is applicable to private and public organizations of all sizes, from large multinational corporations and government organizations, to non-profit organizations and micro/small businesses.

Application of this document can be on several different levels, e.g.:

— a single application (including operating unit, operating division, single project or programme, mergers and acquisitions);
— an individual relationship (including one-to-one relationships, alliance, partnership, business customers, joint venture);
— multiple identified relationships (including multiple partner alliances, consortia, joint ventures, networks, extended enterprise arrangements and end-to-end supply chains);
— full application organization-wide for all identified relationship types.

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at http://www.iso.org/obp

3.1 organization
person or group of people that has its own functions with responsibilities, authorities and relationships to achieve its objectives (3.8)

Note 1 to entry: The concept of organization includes, but is not limited to, sole-trader, company, corporation, firm, enterprise, authority, partnership, charity or institution, or part or combination thereof, whether incorporated or not, public or private.

3.2 stakeholder
interested party
person or organization (3.1) that can affect, be affected by, or perceive itself to be affected by a decision or activity
