Ventilation for buildings — Performance testing of components/products for residential ventilation

Part 8: Performance testing of non-ducted mechanical supply and exhaust ventilation units (including heat recovery)
National foreword

This British Standard is the UK implementation of EN 13141-8:2022. It supersedes BS EN 13141-8:2014, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee RHE/2, Ventilation for buildings, heating and hot water services.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This European Standard was approved by CEN on 10 January 2022.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (EN 13141-8:2022) has been prepared by Technical Committee CEN/TC 156 “Ventilation for buildings”, the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 2023, and conflicting national standards shall be withdrawn at the latest by March 2023.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 13141-8:2014.

In addition to a number of editorial revisions, the following main changes have been made with respect to EN 13141-8:2014:

— scope has been changed, and concerns now also non-ducted units which ventilate more than one single room;
— terms and definitions as well as symbols and abbreviations have been updated in accordance with the parameters used in the document;
— new categories of heat exchanger have been added;
— designations in 7.2.1.4 and the Formulae (1) to (4) have been changed;
— reference of the internal and external leakage rates has been changed to the reference air volume flow;
— extrapolation of the leakage rates has been added;
— 7.2.1.3.2 concerning exhaust air transfer ratio has been added;
— 7.2.4 concerning air flow measurement has been revised;
— requirements to convert the measured values to standard conditions have been added in 7.2.4 and 7.3.2;
— 7.3.3 has been divided into two separate subclauses 7.3.3.1 for standard tests and 7.3.3.2 for cold climate tests;
— formulae to calculate the temperature ratios have been changed;
— wet bulb temperature for the cold climate test has been changed;
— the order of the specific test for alternating units including storage heat exchanges has been changed;
— deviating aspects for alternating units to determine the air flow correction, thermal performance and the exhaust air transfer ratio have been revised;
— Table 10 concerning the temperature conditions for the cooling performance test has been moved in EN 13142.

A list of all parts in the EN 13141 series, published under the general title Ventilation for buildings — Performance testing of components/products for residential ventilation can be found on the CEN website.

Any feedback and questions on this document should be directed to the users’ national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic
of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.
Introduction

This document specifies methods for the performance testing of components used in residential ventilation systems to establish the performance characteristics as identified in EN 13142.

This document incorporates many references to other European and International Standards, especially on characteristics other than the aerodynamic characteristics, for instance on acoustic characteristics.

In most cases some additional tests or some additional conditions are given for the specific use in residential ventilation systems.

This document can be used for the following applications:

— laboratory testing;
— attestation purposes.

The position of this document in the field of standards for the mechanical building services is shown in Figure 1.
Figure 1 — Position of EN 13141-8 in the field of the mechanical building services
1 Scope

This document specifies the laboratory test methods and test requirements for the testing of aerodynamic, thermal, acoustic and the electrical performance characteristics of non-ducted mechanical supply and exhaust residential ventilation units used in single dwellings.

The purpose of this document is not to consider the quality of ventilation but to test the performance of the equipment.

This document is applicable to ventilation units, the latter:

a) containing either:
   — fans for mechanical supply and exhaust;
   — air filters;
   — air-to-air heat exchanger for heat and possibly humidity recovery;
   — control system;
   — inlet and outlet grilles; or
   — alternating heat exchangers which provide separate supply and exhaust air flows;

b) provided either:
   — in one assembly; or
   — in more than one assembly, the separate assemblies of which are designed to be used together.

This document does not deal with ducted units which are covered by EN 13141-7 or units with heat pumps.

Safety requirements are given in EN 60335-2-40 and EN 60335-2-80.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
