

BSI Standards Publication

Geometrical product specifications (GPS) — Dimensional and geometrical tolerances for moulded parts

Part 3: General dimensional and geometrical tolerances and machining allowances for castings using $\pm$ tolerances for indicated dimensions

This is a preview of "BS EN ISO 8062-3:202...". [Click here to purchase the full version from the ANSI store.](#)

National foreword

This British Standard is the UK implementation of EN ISO 8062-3:2023. It is identical to ISO 8062-3:2023. It supersedes BS EN ISO 8062-3:2007, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee TPR/1, Technical Product Realization.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

EUROPÄISCHE NORM

March 2023

ICS 17.040.10

Supersedes EN ISO 8062-3:2007, EN ISO 8062-3:2007/AC:2009

English Version

Geometrical product specifications (GPS) - Dimensional and geometrical tolerances for moulded parts - Part 3: General dimensional and geometrical tolerances and machining allowances for castings using $\pm$ tolerances for indicated dimensions (ISO 8062-3:2023)

Spécification géométrique des produits (GPS) - Tolérances dimensionnelles et géométriques des pièces moulées - Partie 3: Tolérances dimensionnelles et géométriques générales et surépaisseurs d'usinage pour les pièces moulées utilisant des tolérances $\pm$ pour les dimensions indiquées (ISO 8062-3:2023)

Geometrische Produktspezifikationen (GPS) - Maß-, Form- und Lagetoleranzen für Formteile - Teil 3: Allgemeine Maß-, Form- und Lagetoleranzen und Bearbeitungszugaben für Gussstücke mit $\pm$ Toleranzen für die angegebenen Maße (ISO 8062-3:2023)

This European Standard was approved by CEN on 30 December 2022.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (EN ISO 8062-3:2023) has been prepared by Technical Committee ISO/TC 213 "Dimensional and geometrical product specifications and verification" in collaboration with Technical Committee CEN/TC 190 "Foundry technology" the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2023, and conflicting national standards shall be withdrawn at the latest by September 2023.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN ISO 8062-3:2007.

Any feedback and questions on this document should be directed to the users' national standards body/national committee. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Endorsement notice

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 213, *Dimensional and geometrical product specifications and verification*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 190, *Foundry technology*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 8062-3:2007), which has been technically revised. It also incorporates the Technical Corrigendum ISO 8062-3:2007/Cor 1:2009.

The main changes are as follows:

- clarified in title and scope that this document specifies general dimensional and geometrical tolerances as well as machining allowance grades for castings using $\pm$ tolerances for indicated dimensions;
- definitions for the terms “draft angle”, “external draft value” and “internal draft angle” have been added;
- [Clause 4](#) and [Clause 5](#), including [Tables 2](#) to [6](#), have been added and subsequent clauses and tables have been renumbered;
- in [Table 7](#) the linear dimensional casting tolerance grade DCTG 16 has been changed to DCTG 15wt to clarify the concept of wall thickness;
- the nominal dimension to be used in the tables indicating casting tolerances for straightness, flatness, roundness, parallelism, perpendicularity, symmetry and coaxiality ([Tables 8](#) to [11](#)) has been changed;
- [Clause 12](#) on rejection has been clarified;
- the correction according to ISO 8062-3:2007/Cor 1:2009 has been added in [Table A.3](#), footnote b;
- the examples given in [Annex E](#) have been corrected;

— inconsistencies have been clarified.

A list of all parts in the ISO 8062 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document is a geometrical product specification (GPS) standard and is regarded as a complementary process-specific tolerance standard (see ISO 14638). It influences chain links A and B on size and A, B and C on distance in the ISO GPS standards matrix model (see [Annex F](#)) but is not in full accordance with the ISO GPS rules.

For more detailed information on the relation of this document to other standards and the GPS matrix model, see [Annex F](#).

This document defines a system of tolerance grades and machining allowance grades for cast metals and their alloys. Guidance on its application is given in ISO/TS 8062-2.

It is noted that the dimensional specifications introduced by the application of this document can be ambiguous when applied to a dimension which is not a size (see ISO 14405-2).

The tolerances specified for a casting may determine the casting method. It is therefore recommended, before the design or the order is finalized, that the customer liaises with the foundry to discuss:

- a) the proposed casting design and accuracy required;
- b) machining requirements;
- c) moulding method, for example with or without core;
- d) location of the parting surfaces and the necessary draft angles;
- e) the number of castings to be manufactured;
- f) the casting equipment involved;
- g) the consequences of the equipment wearing out during its life cycle;
- h) datum system according to ISO 5459;
- i) casting alloy;
- j) any special requirements, for instance individual dimensional and geometrical tolerances, fillet radii, tolerances and individual machining allowances;

NOTE Tolerance grades which can be achieved for various methods and metals are described in [Annex A](#), because dimensional and geometrical accuracy of a casting is related to production factors.

- k) dimensional tolerances for long series and mass production, where development, adjustment and maintenance of casting equipment make it possible to achieve close tolerances;
- l) dimensional tolerances for short series and single production;
- m) geometrical tolerances.

Information on typical required machining allowance grades is given in [Annex B](#).

Geometrical product specifications (GPS) — Dimensional and geometrical tolerances for moulded parts —

Part 3:

General dimensional and geometrical tolerances and machining allowances for castings using $\pm$ tolerances for indicated dimensions

1 Scope

This document specifies general dimensional and geometrical tolerances as well as machining allowance grades for castings using $\pm$ tolerances for indicated dimensions as delivered to the purchaser according to ISO/TS 8062-2. It is applicable for tolerancing of dimensions and geometry of castings in all cast metals and their alloys produced by various casting manufacturing processes.

This document does not apply to 3D CAD models used without indicated dimensions.

This document applies to both general dimensional and general geometrical tolerances (referred to in or near the title block of the drawing), unless otherwise specified and where specifically referred to on the drawing by one of the references in [Clause 11](#).

The dimensional tolerances covered by this document are tolerances for linear dimensions.

The geometrical tolerances covered by this document are tolerances for:

- straightness;
- flatness;
- roundness;
- parallelism;
- perpendicularity;
- symmetry;
- coaxiality.

This document does not cover other position tolerances, angular dimensional tolerances or cylindricity tolerances.

This document can be used for the selection of tolerance values for individual indications.
