National foreword

This British Standard is the UK implementation of ISO 603-14:2022. It supersedes BS ISO 603-14:1999, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MTE/13, Grinding wheels, abrasive tools, paper and cloths, and powders.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 5, *Grinding wheels and abrasives*.

This second edition cancels and replaces the first edition (ISO 603-14:1999), which has been technically revised.

The main changes are as follows:

- the scope has been specified;
- [Clause 2](#) "Normative references" has been revised;
- [Clause 3](#) "Terms and definitions" has been added;
- in [Clause 4](#) (former [Clause 3](#)), introductory, explanatory sentences have been added for better understanding;
- the figures with shape types and dimensions have been adapted to ISO 525:2020 (e.g. in shape types 27 and 28, the dimension "F" for the elevation of depressed centre has been renamed "M");
- shape type 29 "Depressed centre grinding wheel, convex shape" has been added;
- the values in the tables have been adapted to the state of the art and the most common dimensions for imperial sizes have also been included for more global acceptance;
- [Clause 5](#) (former [Clause 4](#)) "Designation" has been revised with reference to ISO 525;
- former [Clause 5](#) "Specifications" has been removed and the reference to ISO 13942 (limit deviations and run out tolerances) has been given in the scope for information;
- the Bibliography has been revised.

A list of all parts in the ISO 603 series can be found on the ISO website.

Introduction

Dimensions and tolerances are expressed in millimetres, with dimensions in inches (in) shown between brackets.

Bonded abrasive products — Dimensions —

Part 14:

Grinding wheels for deburring and fettling/snagging on an angle grinder

1 Scope

This document specifies the most common nominal dimensions, in millimetres, of:

- shape type 6: straight cup grinding wheel;
- shape type 11: taper cup grinding wheel;
- shape type 27: depressed centre wheel for grinding or grinding/cutting-off;
- shape type 28: depressed centre grinding wheel, concave shape;
- shape type 29: depressed centre grinding wheel, convex shape.

These bonded abrasive products are intended to be used for deburring and fettling/snagging of any surface of a workpiece using hand-held grinding machines (angle grinder). In this application, the workpiece is fixed and the grinding machine is guided by the operator.

This document does not specify limit deviations and run-out tolerances, which are given in ISO 13942.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 525, *Bonded abrasive products — Shape types, designation and marking*

3 Terms and definitions

No terms and definitions are listed in this document.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

4 Shape types and dimensions

4.1 Shape type 6: straight cup grinding wheel

This subclause specifies the shape that a product shall have to be referred to as a straight cup grinding wheel (shape type 6 according to ISO 525).

[Figure 1](#), [Figure 2](#) and [Figure 3](#) show different variations of a type 6 wheel. The symbols of the dimensions to describe a type 6 wheel are given in [Figure 1](#) in accordance with ISO 525.
