## National foreword

This British Standard is the UK implementation of ISO 9982:2021. It supersedes BS ISO 9982:1998, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MCE/10, Belts & Pulley Drive.

A list of organizations represented on this committee can be obtained on request to its committee manager.

### Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 41, *Pulleys and Belts (including veebelts)*, Subcommittee SC 1, *Friction*.

This third edition cancels and replaces the second edition (ISO 9982:1998), which has been technically revised. The main changes compared to the previous edition are as follows:

- updating of the normative reference listing;
- clarification made where the document is not for elastic belts;
- revision of 5.3.6 to reference ISO 254 for pulley roughness;
- removal of the current roughness values;
- specification of the maximum pulley groove radius ([Table 2](#));
- specification of the minimum pulley groove radius of PH and PJ profiles ([Table 2](#));
- specification of the maximum belt groove bottom radius of PH and PJ profiles ([Table 8](#));
- specification of the measuring pulleys and measuring forces of PK, PL and PM profiles ([Table 9](#)).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

A V-ribbed belt drive is composed of an endless belt with a longitudinally ribbed traction surface which engages and grips, by friction, pulley grooves of similar shape. The belt ribbed surface fits the pulley grooves to make nearly total contact.

# Belt drives — Pulleys and V-ribbed belts for industrial applications — PH, PJ, PK, PL and PM profiles: dimensions

## 1 Scope

This document specifies the principal dimensional characteristics of V-ribbed pulley groove profiles, together with the corresponding endless V-ribbed belts, of PH, PJ, PK, PL and PM profiles which are used for general industrial applications except elastic belts.

The PK belt was originally established for automotive accessory drive applications and ISO 9981 deals specifically with that particular field.

## 2 Normative references

There are no normative references in this document.

## 3 Terms and definitions

No terms and definitions are listed in this document.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

## 4 Symbols

For the purpose of this document, the symbols given in [Table 1](#) apply.

**Table 1 — Symbols**

Symbol	Designation	Unit
<i>b</i>	nominal width of the belt	mm
<i>b<sub>e</sub></i>	effective line differential	mm
<i>d<sub>B</sub></i>	checking ball or rod diameter	mm
<i>d<sub>e</sub></i>	effective diameter	mm
<i>d<sub>o</sub></i>	outer diameter	mm
<i>d<sub>p</sub></i>	pitch diameter	mm
<i>E</i>	centre distance between the pulleys	mm
<i>E<sub>max</sub></i>	maximum centre distance between the pulleys	mm
<i>E<sub>min</sub></i>	minimum centre distance between the pulleys	mm
$\Delta E$	centre distance variation	mm
<i>e</i>	groove pitch	mm
<i>F</i>	measuring force per rib	N
<i>f</i>	distance between the outside of the rim and the axis of the first groove	mm
<i>h</i>	belt height	mm
<i>K</i>	diameter over balls or rods	mm
