

<b>Contents</b>	<b>Page</b>
1 Introduction.....	1
2 Scope and purpose .....	1
3 Definitions.....	1
4 Gas properties.....	3
4.1 Gas identification .....	3
4.2 Physical properties .....	3
4.3 Chemical properties.....	4
4.4 Toxicology .....	4
4.5 Environmental issues .....	4
5 Gas major hazards .....	5
5.1 Introduction to fire and explosion hazards.....	5
5.2 Factors influencing combustion—nitrogen trifluoride considerations .....	5
5.3 Factors influencing combustion—material considerations .....	6
5.4 Other factors influencing combustion—energy source.....	9
6 Gas handling equipment—general considerations.....	9
6.1 Design principles .....	9
6.2 Materials of construction.....	10
6.3 Gas velocities .....	10
6.4 Cleaning and passivation after installation and maintenance.....	10
6.5 Valves.....	10
6.6 Filters.....	11
6.7 Operating procedures and personnel .....	11
6.8 Maintenance procedures .....	11
6.9 Separation from flammable gases.....	11
6.10 Heat dissipation .....	11
6.11 Compression .....	11
7 Gas cylinder filling .....	12
7.1 Filling facility considerations.....	12
7.2 Gas containers and associated equipment .....	12
7.3 Cylinder filling equipment .....	13
8 Gas supply to point-of-use .....	14
8.1 Facility considerations .....	14
8.2 Gas supply manifolds .....	14
8.3 Operating procedures and personnel.....	15
9 Gas abatement systems.....	15
9.1 Basic principles of abatement.....	15
9.2 Abatement—semiconductor process tool exhaust system.....	16
9.3 Abatement at a cylinder filling facility.....	16
10 Emergency response .....	16
11 References .....	16
12 Additional references.....	17
 <b>Tables</b>	
Table 1—Physical properties of nitrogen trifluoride .....	3
Table 2—Table of conversion factors .....	3

**Figures**

Figure 1—Vapor pressure curve ..... 4  
Figure 2—Triangle of fire ..... 5

**Appendices**

Appendix A—EIGA Material Safety Data Sheet (Informative) ..... 18  
Appendix B—Audit checklist (Informative) ..... 22
