

Contents

	Page
1 Introduction.....	1
2 Scope and Purpose.....	1
2.1 Scope	1
2.2 Purpose	1
3 Definitions.....	1
4 Gas properties.....	4
4.1 General.....	4
4.2 Physical properties.....	5
4.3 Chemical properties.....	6
4.4 Health properties	6
4.5 Flammability properties	6
4.6 Environmental properties.....	6
5 Gas major hazards	7
5.1 Fire and explosion hazards	7
5.2 Toxicology	8
6 Gas handling equipment—general considerations.....	10
6.1 Materials of construction.....	11
6.2 Compatibility of sealing compounds	11
6.3 System pressures and overpressure protection.....	11
6.4 Valve types and filter types.....	12
6.5 Tubing.....	12
6.6 Purification materials	12
6.7 System leak tests and purge	12
6.8 System temperature control	13
6.9 Use of electrical control and use of explosion proof equipment.....	13
6.10 Monitoring system	13
6.11 Abatement system.....	14
6.12 System vent.....	14
6.13 Regulators	14
7 Process and operation	14
7.1 Life safety control (gas detection and alarm systems)	14
7.2 Operational procedures and personnel	16
7.3 Ventilation.....	16
7.4 On-going maintenance and PM programs.....	17
8 Gas cylinder filling/packaging.....	18
8.1 Filling facility consideration.....	18
8.2 Containers	18
8.3 Filling equipment	19
9 Storage and handling	19
9.1 General guidelines.....	19
9.2 Storage	20
9.3 Handling	20
9.4 Security.....	22
10 Gas supply to point of use.....	22
10.1 Process line control	22
10.2 Regulators	22

11	Gas abatement systems.....	22
11.1	Basic principles of abatement.....	23
11.2	User requirements	25
11.3	Waste stream disposal	25
11.4	Waste management	25
12	Emergency response	26
12.1	Preparation.....	26
12.2	Response	27
13	References	27

Tables

Table 1—Properties of arsine	4
Table 2—U.S. published data of arsenic.....	7
Table 3—Toxic information of arsine	9
Table 4—Material compatibility guide	11

Figures

Figure 1—Arsine vapor pressure versus temperature (°C).....	5
Figure 2—Arsine vapor pressure versus temperature (°F)	5
