

Contents

1	Introduction.....	1
2	Scope	1
3	Definitions.....	1
4	Oxygen properties, hazards, and hazard analysis and risk assessment	2
4.1	Oxygen properties	2
4.2	Oxygen hazards	2
4.3	Oxygen hazard analysis and risk assessment	3
5	Kindling chain, ignition mechanisms, and contributing factors	6
5.1	Kindling chain and ignition mechanisms	6
5.2	Contributing factors	8
6	Material selection	9
6.1	Selection of metallic materials	9
6.2	Metallic material ranking.....	10
6.3	Selection of nonmetallic materials	11
6.4	Specific requirements for lubricants and locking compounds.....	12
7	Design philosophy	13
7.1	General system design.....	13
7.2	Valve design.....	13
8	Valve cleaning for oxygen service.....	18
8.1	Valve cleaning strategy	18
8.2	Cleanliness inspection.....	19
8.3	Standard of cleanliness	19
8.4	Packaging, storage, and handling	19
8.5	Records	20
9	Site installation	20
10	Operations	21
10.1	Personnel	21
10.2	Isolation, drain, and vent valves	21
10.3	Pressure relief valves	21
10.4	Pressurizing piping systems	21
10.5	Valve leaks	21
10.6	Shutdown and startup of piping systems.....	22
11	Maintenance.....	22
11.1	General considerations.....	22
11.2	Maintenance strategy of valves	24
11.3	Assembly and installation	24
11.4	Spares	25
11.5	Supervision and inspection.....	26
11.6	Documentation	26
11.7	System restart after maintenance.....	26
12	Training	27
12.1	Training scope and elements of the training program	27
13	Quality assurance, quality control measures for valves and spare parts	28
13.1	Valve manufacturer control.....	28
13.2	Construction site management.....	30
