

Contents	Page
1 Introduction.....	1
2 Scope and purpose	1
3 Definitions.....	2
4 Causes and consequences of low temperature	3
4.1 Causes of low temperature.....	3
4.2 Consequences of low temperature.....	5
5 Types of vaporizers	6
5.1 High thermal ballast vaporizers	7
5.2 Low thermal ballast vaporizers	7
6 Design philosophy	7
6.1 Inherent safety.....	7
6.2 Risk assessment	7
6.3 Reliability of customer supply	8
7 Ranking of hazards	9
7.1 Pressure volume energy.....	9
7.2 Hazard of fluid	9
7.3 Likelihood of low temperature.....	10
7.4 Operating pattern.....	10
8 Safe design criteria.....	10
8.1 Vaporizer outlet materials.....	10
8.2 Ambient air vaporizers.....	11
8.3 Independent layers of protection	11
8.4 Shutoff devices and valves.....	11
8.5 Throttling valves	12
8.6 Temperature sensing devices	12
8.7 Pump systems	12
8.8 Low thermal ballast vaporizers	12
8.9 Buffer vessels and location.....	13
8.10 Different vaporizers in parallel.....	15
9 Considerations for low temperature protection.....	15
9.1 Uninterruptible supply system	15
9.2 Interruptible supply requirements	16
9.3 IEC 61511.....	17
10 Solutions.....	17
10.1 General considerations for low temperature protection systems.....	18
10.2 Response to alarms.....	18
10.3 Recommended solutions for specific situations.....	18
11 Operation.....	20
11.1 Consumption monitoring.....	20
12 Periodic inspection, calibration, and testing	21
12.1 Periodic inspection	21
12.2 Periodic calibration and testing.....	22
13 Training for gas company personnel	22
14 Customer awareness	23
14.1 Customer agreements.....	23
14.2 Customer training and information	23
15 References	24
