DS projekt: M298491

ICS: 43.120

Første del af denne publikations betegnelse er:

DS/EN IEC, hvilket betyder, at det er en international standard, der har status som europæisk og dansk standard.

Denne publikations overensstemmelse er:

IDT med: IEC 61851-1:2017

IDT med: EN IEC 61851-1:2019

DS-publikationen er på engelsk.

Denne publikation erstatter: [DS/EN 61851-1:2011](#)

DS-publikationstyper

Dansk Standard udgiver forskellige publikationstyper.

Typen på denne publikation fremgår af forsiden.

Der kan være tale om:

Dansk standard

- standard, der er udarbejdet på nationalt niveau, eller som er baseret på et andet lands nationale standard, eller
- standard, der er udarbejdet på internationalt og/eller europæisk niveau, og som har fået status som dansk standard

DS-information

- publikation, der er udarbejdet på nationalt niveau, og som ikke har opnået status som standard, eller
- publikation, der er udarbejdet på internationalt og/eller europæisk niveau, og som ikke har fået status som standard, fx en teknisk rapport, eller
- europæisk præstandard

DS-håndbog

- samling af standarder, eventuelt suppleret med informativt materiale

DS-hæfte

- publikation med informativt materiale

Til disse publikationstyper kan endvidere udgives

- tillæg og rettelsesblade

DS-publikationsform

Publikationstyperne udgives i forskellig form som henholdsvis

- fuldtekstpublikation (publikationen er trykt i sin helhed)
- godkendelsesblad (publikationen leveres i kopi med et trykt DS-omslag)
- elektronisk (publikationen leveres på et elektronisk medie)

DS-betegnelse

Alle DS-publikationers betegnelse begynder med DS efterfulgt af et eller flere præfikser og et nr., fx **DS 383**, **DS/EN 5414** osv. Hvis der efter nr. er angivet et **A** eller **Cor**, betyder det, enten at det er et **tillæg** eller et **rettelsesblad** til hovedstandard, eller at det er indført i hovedstandard.

DS-betegnelse angives på forsiden.

Overensstemmelse med anden publikation:

Overensstemmelse kan enten være IDT, EQV, NEQ eller MOD

- **IDT:** Når publikationen er identisk med en given publikation.
- **EQV:** Når publikationen teknisk er i overensstemmelse med en given publikation, men præsentationen er ændret.
- **NEQ:** Når publikationen teknisk eller præsentationsmæssigt ikke er i overensstemmelse med en given standard, men udarbejdet på baggrund af denne.
- **MOD:** Når publikationen er modificeret i forhold til en given publikation.

EUROPÄISCHE NORM

July 2019

ICS 43.120

Supersedes EN 61851-1:2011

English Version

Electric vehicle conductive charging system - Part 1: General requirements (IEC 61851-1:2017)

Système de charge conductive pour véhicules électriques -
Partie 1: Exigences générales
(IEC 61851-1:2017)

Konduktive Ladesysteme für Elektrofahrzeuge - Teil 1:
Allgemeine Anforderungen
(IEC 61851-1:2017)

This European Standard was approved by CENELEC on 2017-03-14. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

The text of document 69/436/FDIS, future edition 3 of IEC 61851-1, prepared by IEC/TC 69 "Electric road vehicles and electric industrial trucks" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 61851-1:2019.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2020-01-05
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2022-07-05

This document supersedes EN 61851-1:2011.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CENELEC by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For the relationship with EU Directive(s) see informative Annex ZZ, which is an integral part of this document.

Endorsement notice

The text of the International Standard IEC 61851-1:2017 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standards indicated:

(informative)

Relationship between this European standard and the safety objectives of Directive 2014/35/EU [2014 OJ L96] aimed to be covered

This European Standard has been prepared under a Commission's standardization request relating to harmonized standards in the field of the Low Voltage Directive, M/511, to provide one voluntary means of conforming to safety objectives of Directive 2014/35/EU of the European Parliament and of the Council of 26 February 2014 on the harmonization of the laws of the Member States relating to the making available on the market of electrical equipment designed for use within certain voltage limits [2014 OJ L96].

Once this standard is cited in the Official Journal of the European Union under that Directive, compliance with the normative clauses of this standard given in Table ZZ.1 confers, within the limits of the scope of this standard, a presumption of conformity with the corresponding safety objectives of that Directive, and associated EFTA regulations.

Table ZZ.1 — Correspondence between this European standard and Annex I of Directive 2014/35/EU [2014 OJ L96]

Safety objectives of Directive 2014/35/EU	Clause(s) / subclause(s) of this EN	Remarks / Notes
1. General Conditions		
(a) the essential characteristics, the recognition and observance of which will ensure that electrical equipment will be used safely and in applications for which it was made, shall be marked on the electrical equipment, or, if this is not possible, on an accompanying document	1 Scope 2 Normative References 3 Terms and Definitions 5 Classification 17 Marking and instructions	
(b) the electrical equipment, together with its component parts, shall be made in such a way as to ensure that it can be safely and properly assembled and connected	4 General requirement 6.3.1.2 Continuous continuity checking of the protective conductor 6.3.1.3 Verification that the EV is properly connected to the EV supply equipment 6.3.2.3 Intentional and unintentional disconnection of the vehicle connector and/or the EV plug 9 Conductive electrical interface requirements 10 Requirements for adaptors 1 Cable assembly requirements (incl. chapter12)	

This is a preview of "DS/EN IEC 61851-1:20...". Click here to purchase the full version from the ANSI store.

Directive 2014/35/EU	of this EN	
(c) the electrical equipment shall be so designed and manufactured as to ensure that protection against the hazards set out in points 2 and 3 is assured, providing that the equipment is used in applications for which it was made and is adequately maintained	Details see points 2 and 3	
2. Protection against hazards arising from the electrical equipment		
(a) persons and domestic animals are adequately protected against the danger of physical injury or other harm which might be caused by direct or indirect contact	8 Protection against electric shock 9 Conductive electrical interface requirements 13.4 IP Degree 13.6 Touch current 15 Automatic reclosing of protective devices	
(b) temperatures, arcs or radiation which would cause a danger, are not produced	6.3.2.3 Intentional and unintentional disconnection of the vehicle connector and/or the EV plug 9 Conductive electrical interface requirements 13 EV supply equipment constructional requirements and tests 14 Overload and short-circuit protection	
(c) persons, domestic animals and property are adequately protected against non-electrical dangers caused by the electrical equipment which are revealed by experience	13 EV supply equipment constructional requirements and tests	
(d) the insulation is suitable for foreseeable conditions	13.5 Insulation resistance 13.7 Dielectric withstand voltage	
3. Protection against hazards which may be caused by external influences on the electrical equipment		
(a) meets the expected mechanical requirements in such a way that persons, domestic animals and property are not endangered	4 General requirements 13.11 Mechanical strength	

This is a preview of "DS/EN IEC 61851-1:20...". [Click here to purchase the full version from the ANSI store.](#)

Directive 2014/35/EU	of this EN	
(b) is resistant to non-mechanical influences in expected environmental conditions, in such a way that persons, domestic animals and property are not endangered	13.3 Clearances and creepage distances 13.4 IP degrees 13.6 Touch current 13.7 Dielectric withstand voltage 13.8 Temperature rise 13.9 Damp heat functional test 13.10 Minimum temperature functional test	
(c) does not endanger persons, domestic animals and property in foreseeable conditions of overload	11 Cable assembly requirements 14 Overload and short-circuit protection 14.2 Overload protection of the cable assembly 14.3 Short-circuit protection of the charging cable	

WARNING 1 — Presumption of conformity stays valid only as long as a reference to this European standard is maintained in the list published in the Official Journal of the European Union. Users of this standard should consult frequently the latest list published in the Official Journal of the European Union.

WARNING 2 — Other Union legislation may be applicable to the product(s) falling within the scope of this standard.

About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Catalogue IEC - webstore.iec.ch/catalogue

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

Recherche de publications IEC - www.iec.ch/searchpub

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient 20 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

65 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

Service Clients - webstore.iec.ch/csc

FOREWORD	9
INTRODUCTION	12
1 Scope	14
2 Normative references	15
3 Terms and definitions	17
3.1 Electric supply equipment	17
3.2 Insulation	19
3.3 Functions	20
3.4 Vehicle	21
3.5 Cords, cables and connection means	21
3.6 Service and usage	24
3.7 General terms	25
4 General requirements	27
5 Classification	27
5.1 Characteristics of power supply and output	27
5.1.1 Characteristics of power supply input	27
5.1.2 Characteristics of power supply output	28
5.2 Normal environmental conditions	28
5.3 Special environmental conditions	28
5.4 Access	28
5.5 Mounting method	28
5.6 Protection against electric shock	28
5.7 Charging modes	29
6 Charging modes and functions	29
6.1 General	29
6.2 Charging modes	29
6.2.1 Mode 1	29
6.2.2 Mode 2	30
6.2.3 Mode 3	30
6.2.4 Mode 4	30
6.3 Functions provided in Mode 2, 3 and 4	31
6.3.1 Mandatory functions in Modes 2, 3, and 4	31
6.3.2 Optional functions for Modes 2, 3 and 4	32
7 Communications	33
7.1 Digital communication between the EV supply equipment and the EV	33
7.2 Digital communication between the EV supply equipment and the management system	34
8 Protection against electric shock	34
8.1 Degrees of protection against access to hazardous-live-parts	34
8.2 Stored energy	35
8.2.1 Disconnection of plug connected EV supply equipment	35
8.2.2 Loss of supply voltage to permanently connected EV supply equipment	35
8.3 Fault protection	35
8.4 Protective conductor	35
8.5 Residual current protective devices	36

8.6	Safety requirements for signalling circuits between the EV supply equipment and the EV	37
8.7	Isolating transformers	37
9	Conductive electrical interface requirements	37
9.1	General	37
9.2	Functional description of standard accessories	37
9.3	Functional description of the basic interface	38
9.4	Functional description of the universal interface	38
9.5	Functional description of the DC interface	38
9.6	Functional description of the combined interface	38
9.7	Wiring of the neutral conductor	38
10	Requirements for adaptors	39
11	Cable assembly requirements	39
11.1	General	39
11.2	Electrical rating	39
11.3	Dielectric withstand characteristics	40
11.4	Construction requirements	40
11.5	Cable dimensions	40
11.6	Strain relief	40
11.7	Cable management and storage means for cables assemblies	40
12	EV supply equipment constructional requirements and tests	41
12.1	General	41
12.2	Characteristics of mechanical switching devices	41
12.2.1	General	41
12.2.2	Switch and switch-disconnector	41
12.2.3	Contactors	42
12.2.4	Circuit-breaker	42
12.2.5	Relays	42
12.2.6	Inrush current	42
12.2.7	Residual direct current monitoring device (RDC MD)	42
12.3	Clearances and creepage distances	42
12.4	IP degrees	43
12.4.1	Degrees of protection against solid foreign objects and water for the enclosures	43
12.4.2	Degrees of protection against solid foreign objects and water for basic, universal and combined and DC interfaces	43
12.5	Insulation resistance	44
12.6	Touch current	44
12.7	Dielectric withstand voltage	45
12.7.1	AC withstand voltage	45
12.7.2	Impulse dielectric withstand (1,2 μ s/50 μ s)	45
12.8	Temperature rise	45
12.9	Damp heat functional test	46
12.10	Minimum temperature functional test	46
12.11	Mechanical strength	46
13	Overload and short-circuit protection	46
13.1	General	46
13.2	Overload protection of the cable assembly	47
13.3	Short-circuit protection of the charging cable	47

14	Automatic reclosing of protective devices	47
15	Emergency switching or disconnect (optional)	48
16	Marking and instructions	48
16.1	Installation manual of EV charging stations	48
16.2	User manual for EV supply equipment	49
16.3	Marking of EV supply equipment	49
16.4	Marking of charging cable assemblies case B	49
16.5	Durability test for marking	50
Annex A (normative) Control pilot function through a control pilot circuit using a PWM signal and a control pilot wire.....		51
A.1	General.....	51
A.2	Control pilot circuit.....	51
A.2.1	General	51
A.2.2	Typical control pilot circuit	52
A.2.3	Simplified control pilot circuit	53
A.2.4	Additional components and high frequency signals	53
A.3	Requirements for parameters and system behaviour	54
A.4	Test procedures	72
A.4.1	General	72
A.4.2	Constructional requirements of the EV simulator	72
A.4.3	Test procedure	72
A.4.4	Oscillator frequency and generator voltage test	73
A.4.5	Duty cycle test.....	73
A.4.6	Pulse wave shape test	74
A.4.7	Sequences test.....	74
A.4.8	Test of interruption of the protective conductor	76
A.4.9	Test of short-circuit values of the voltage.....	76
A.4.10	Example of a test simulator of the vehicle (informative)	76
A.4.11	Optional hysteresis test	79
A.5	Implementation hints.....	80
A.5.1	Retaining a valid authentication until reaching CP State B	80
A.5.2	Load control using transitions between state x1 and x2	81
A.5.3	Information on difficulties encountered with some legacy EVs for wake-up after a long period of inactivity (informative)	81
Annex B (normative) Proximity detection and cable current coding circuits for the basic interface		82
B.1	Circuit diagram for vehicle couplers using an auxiliary switch associated with the proximity detection contact.....	82
B.2	Circuit for simultaneous proximity detection and current coding	83
Annex C (informative) Examples of circuit diagrams for a basic and universal vehicle couplers.....		86
C.1	General.....	86
C.2	Circuits diagrams for Mode 1, Mode 2 and Mode 3, using a basic single phase vehicle coupler	86
C.3	Circuits diagrams for Mode 3, using a basic single phase or three-phase accessory without proximity switch.....	90
C.4	Example of circuit diagram for Mode 4 connection using universal coupler.....	91
Annex D (informative) Control pilot function that provides LIN communication using the control pilot circuit.....		93
D.1	Overview.....	93

This is a preview of "DS/EN IEC 61851-1:20...". [Click here to purchase the full version from the ANSI store.](#)

D.1.1	General	93
D.1.2	LIN-CP features.....	93
D.1.3	Normative references	93
D.1.4	Terms and abbreviations	94
D.2	Scope and context	94
D.3	Overview of control pilot functions	96
D.4	Control pilot circuit.....	97
D.4.1	General	97
D.4.2	Control pilot circuit.....	97
D.4.3	Charging station control pilot circuit interface	98
D.4.4	EV control pilot circuit interface	99
D.4.5	LIN communication transceiver	99
D.4.6	Optional cable assembly node	100
D.5	Control pilot circuit interaction.....	100

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRIC VEHICLE CONDUCTIVE CHARGING SYSTEM –

Part 1: General requirements

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61851-1 has been prepared by IEC technical committee 69: Electric road vehicles and electric industrial trucks.

This third edition cancels and replaces the second edition published in 2010. It constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) The contents of IEC 61851-1:2010 have been re-ordered. Numbering of clauses has changed as new clauses were introduced and some contents moved for easy reading. The following lines give an insight to the new ordering in addition to the main technical changes.
- b) All requirements from IEC 61851-22 have been moved to this standard, as work on IEC 61851-22 has ceased.

This is a preview of "DS/EN IEC 61851-1:20...". [Click here to purchase the full version from the ANSI store.](#)

- c) Any requirements that concern EMC have been removed from the text and are expected to be part of the future version of 61851-21-21.
- d) Clause 4 contains the original text from IEC 61851-1:2010 and all general requirements from Clause 6 of IEC 61851-1:2010.
- e) Clause 5 has been introduced to provide classifications for EV supply equipment.
- f) Previous general requirements of Clause 6 have been integrated into Clause 4. Clause 6 contains all Mode descriptions and control requirements. Specific requirements for the combined use of AC and DC on the same contacts are included.
- g) Clause 9 is derived from previous Clause 8. Adaptation of the description of DC accessories to allow for the DC charging modes that have only recently been proposed by industry and based on the standards IEC 61851-23, IEC 61851-24 as well as IEC 62196-1, IEC 62196-2 and IEC 62196-3. Information and tables contained in the IEC 62196 series standards have been removed from this standard.
- h) Clause 10 specifically concerns the requirements for adaptors, initially in Clause 6.
- i) Clause 11 includes new requirements for the protection of the cable.
- j) Specific requirements for equipment that is not covered in the IEC 62752 remain in the present document.
- k) Previous Clause 11 is now treated in Clauses 12 to 13. The requirements in 61851-1 cover the EV supply equipment of both mode 2 and mode 3 types, with the exception in-cable control and protection devices for mode 2 charging of electric road vehicles (IC-CPD) which are covered by IEC 62752.
- l) Clause 14 gives requirements on automatic reclosing of protection equipment.
- m) Clause 16 gives requirements for the marking of equipment and the contents of the installation and user manual. This makes specific mention of the need to maintain coherence with the standards for the fixed installation. It also contains an important text on the markings for temperature ratings.
- n) Annex A has been reviewed to introduce complete sequences and tests and to make the exact cycles explicit. Annex A in this edition supersedes IEC TS 62763 (Edition 1).
- o) Annex B is normative and has requirements for proximity circuits with and without current coding.
- p) Previous Annex C has been removed and informative descriptions of pilot function and proximity function implementations initially in Annex B are moved to Annex C.
- q) New informative Annex D describing an alternative pilot function system has been introduced.
- r) Dimensional requirements for free space to be left around socket-outlets used for EV energy supply are given in the informative Annex E.
- s) The inclusion of protection devices within the EV supply equipment could, in some cases, contribute to the protection against electric shock as required by the installation. This is covered by the information required for the installation of EV supply equipment in Clause 16 (Marking).

The text of this standard is based on the following documents:

FDIS	Report on voting
69/436/FDIS	69/469/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

¹ Under preparation.

This is a preview of "DS/EN IEC 61851-1:20...". [Click here to purchase the full version from the ANSI store.](#)

A list of all parts of the IEC 61851 series, under the general title *Electric vehicle conductive charging system* can be found on the IEC website.

In this standard, the following print types are used:

- *test specifications and instructions regarding application of Part 1: italic type.*
- notes: smaller roman type.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This standard is the first part of the IEC 61851 series of standards that gives the general requirements for the supply² of electric energy to Electric road vehicles³. It is to be noted that the vehicle and the EV supply equipment² make up a complete system that is covered by a number of IEC and ISO standards.

IEC 61851 covers the mechanical, electrical, communications, EMC and performance requirements for EV supply equipment used to charge electric vehicles, including light electric vehicles.

IEC 61851 is divided into several parts as follows:

- *Part 1: General Requirements*,
This document gives the general requirements that serve as a basis for all the subsequent standards in the series. It includes the requirements for AC EV supply equipment.
- *Part 21-1⁴: Electric vehicle onboard charger EMC requirements for conductive connection to an AC/DC supply*. This part will cover requirements for EMC onboard the vehicle.
- *Part 21-2⁵: EMC requirements for OFF board electric vehicle charging systems*. This part will cover all requirements for AC and DC EV supply equipment. EMC requirements for wireless power transfer systems (WPT) will not be included.
- *Part 23: DC electric vehicle charging station (2014)*. This part covers the requirements for DC charging stations both permanently wired and cable and plug connected.
- *Part 24: Digital communication between a d.c. EV charging station and an electric vehicle for control of d.c. charging (2014)*. This part provides the requirements for communication between the vehicle and the DC charging stations of Part 23.

IEC 61851-3 subseries is under development and is intended to cover EV supply equipment with a DC output not exceeding 120 V where reinforced or double insulation or class III is used as the principal means of protection against electric shock (information on scope as available on 3/2016).

- *Part 3-1: Electric vehicles conductive power supply system – Part 3-1: General Requirements for Light Electric Vehicles (LEV) AC and DC conductive power supply systems*.
- *Part 3-2: Electric vehicles conductive power supply system – Part 3-2: Requirements for Light Electric Vehicles (LEV) DC off-board conductive power supply systems*.
- *Part 3-3: Electric vehicles conductive power supply system – Part 3-3: Requirements for Light Electric Vehicles (LEV) battery swap systems*.
- *Part 3-4: Electric vehicles conductive power supply system – Part 3-4: Requirements for Light Electric Vehicles (LEV) communication*.
- *Part 3-5: Electric vehicles conductive power supply system – Part 3-5: Requirements for Light Electric Vehicles communication – Pre-defined communication parameters*.
- *Part 3-6: Electric vehicles conductive power supply system – Part 3-6: Requirements for Light Electric Vehicles communication – Voltage converter unit*.
- *Part 3-7: Electric vehicles conductive power supply system – Part 3-7: Requirements for Light Electric Vehicles communication – Battery system*.

² The term "supply or electric energy" is used to designate energy flow to and from the electric vehicle. The term "charging" used in the title is also used to designate such energy flow.

³ The reader is advised to refer to the definitions clause 3 for this and all subsequent terms that are used in this document.

⁴ Under preparation.

⁵ Under preparation.

Documents directly related to the present document:

- ISO 17409:2015, *Electrically propelled road vehicles – Connection to an external electric power supply – Safety requirements.*

This document gives requirements for electric vehicle that is to be connected to the EV supply equipment. It covers all the classes of vehicles that are in the scope of ISO/TC 22/SC 37.

- IEC 62752:2016, *In-cable control and protection device for mode 2 charging of electric road vehicles (IC-CPD).*

This product standard gives the requirements for Mode 2 cable assemblies that include supplementary protective and control devices that allow the safe connection of a vehicle to a mains socket-outlet of an installation.

- ISO/IEC 15118 (all parts), *Road vehicles — Vehicle to grid communication interface*

This series of documents gives the description and the requirements for high level data communication between the EV and the EV supply equipment.

Requirements for wireless power transfer systems are given in IEC 61980-1.

ELECTRIC VEHICLE CONDUCTIVE CHARGING SYSTEM –

Part 1: General requirements

1 Scope

This part of IEC 61851 applies to EV supply equipment for charging electric road vehicles, with a rated supply voltage up to 1 000 V AC or up to 1 500 V DC. and a rated output voltage up to 1 000 V AC. or up to 1 500 V DC.

Electric road vehicles (EV) cover all road vehicles, including plug-in hybrid road vehicles (PHEV), that derive all or part of their energy from on-board rechargeable energy storage systems (RESS).

This standard also applies to EV supply equipment supplied from on-site storage systems (e.g. buffer batteries).

The aspects covered in this standard include:

- the characteristics and operating conditions of the EV supply equipment;
- the specification of the connection between the EV supply equipment and the EV;
- the requirements for electrical safety for the EV supply equipment.

Additional requirements may apply to equipment designed for specific environments or conditions, for example:

- EV supply equipment located in hazardous areas where flammable gas or vapour and/or combustible materials, fuels or other combustible, or explosive materials are present;
- EV supply equipment designed to be installed at an altitude of more than 2 000 m;
- EV supply equipment intended to be used on board on ships;

Requirements for electrical devices and components used in EV supply equipment are not included in this standard and are covered by their specific product standards.

EMC requirements for EV supply equipment are expected to be covered in the future IEC 61851-21-2⁶.

Requirements for bi-directional energy transfer are under consideration and are not in this edition of IEC 61851-1.

This standard does not apply to:

- safety aspects related to maintenance;
- charging of trolley buses, rail vehicles, industrial trucks and vehicles designed primarily for use off-road;
- equipment on the EV;
- EMC requirements for equipment on the EV while connected, which are covered in IEC 61851-21-1;
- Charging RESS off board of the EV;

⁶ Under consideration.

This is a preview of "DS/EN IEC 61851-1:20...". [Click here to purchase the full version from the ANSI store.](#)

- DC EV supply equipment that relies specifically on double/reinforced insulation or class III protection against electric shock. See IEC 61851-23 or the future IEC 61851-3 series.

The IEC 61851 series covers all EV supply equipment with the exception of in-cable control and protection devices for mode 2 charging of electric road vehicles (IC-CPD) which are covered by IEC 62752.
