DS projekt: M302583

ICS: 75.160.20

Første del af denne publikations betegnelse er:

DS/EN, hvilket betyder, at det er en europæisk standard, der har status som dansk standard.

Denne publikations overensstemmelse er:

IDT med: EN 15293:2018

DS-publikationen er på engelsk.

Denne publikation erstatter: [DS/CEN/TS 15293:2011](#)

DS-publikationstyper

Dansk Standard udgiver forskellige publikationstyper.

Typen på denne publikation fremgår af forsiden.

Der kan være tale om:

Dansk standard

- standard, der er udarbejdet på nationalt niveau, eller som er baseret på et andet lands nationale standard, eller
- standard, der er udarbejdet på internationalt og/eller europæisk niveau, og som har fået status som dansk standard

DS-information

- publikation, der er udarbejdet på nationalt niveau, og som ikke har opnået status som standard, eller
- publikation, der er udarbejdet på internationalt og/eller europæisk niveau, og som ikke har fået status som standard, fx en teknisk rapport, eller
- europæisk præstandard

DS-håndbog

- samling af standarder, eventuelt suppleret med informativt materiale

DS-hæfte

- publikation med informativt materiale

Til disse publikationstyper kan endvidere udgives

- tillæg og rettelsesblade

DS-publikationsform

Publikationstyperne udgives i forskellig form som henholdsvis

- fuldttekstpublikation (publikationen er trykt i sin helhed)
- godkendelsesblad (publikationen leveres i kopi med et trykt DS-omslag)
- elektronisk (publikationen leveres på et elektronisk medie)

DS-betegnelse

Alle DS-publikationers betegnelse begynder med DS efterfulgt af et eller flere præfikser og et nr., fx **DS 383**, **DS/EN 5414** osv. Hvis der efter nr. er angivet et **A** eller **Cor**, betyder det, enten at det er et **tillæg** eller et **rettelsesblad** til hovedstandard, eller at det er indført i hovedstandard.

DS-betegnelse angives på forsiden.

Overensstemmelse med anden publikation:

Overensstemmelse kan enten være IDT, EQV, NEQ eller MOD

- **IDT:** Når publikationen er identisk med en given publikation.
- **EQV:** Når publikationen teknisk er i overensstemmelse med en given publikation, men præsentationen er ændret.
- **NEQ:** Når publikationen teknisk eller præsentationsmæssigt ikke er i overensstemmelse med en given standard, men udarbejdet på baggrund af denne.
- **MOD:** Når publikationen er modificeret i forhold til en given publikation.

EUROPÄISCHE NORM

August 2018

ICS 75.160.20

Supersedes CEN/TS 15293:2011

English Version

Automotive fuels - Automotive ethanol (E85) fuel - Requirements and test methods

Carburants pour automobiles - Carburant
pour automobiles Ethanol (E85) -
Exigences et méthodes d'essai

Kraftstoffe - Ethanolkraftstoff (E85) -
Anforderungen und Prüfverfahren

This European Standard was approved by CEN on 6 May 2018.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

European foreword

This document ([EN 15293:2018](#)) has been prepared by Technical Committee CEN/TC 19 "Gaseous and liquid fuels, lubricants and related products of petroleum, synthetic and biological origin", the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by November 2018, and conflicting national standards shall be withdrawn at the latest by November 2018.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes [CEN/TS 15293:2011](#).

Significant technical changes between this European Standard and [CEN/TS 15293:2011](#) are:

- the maximum level of ethers has been excluded as the requirement of using standardized unleaded petrol and ethanol as blending components made this requirement obsolete;
- the requirements towards contaminants originating mainly from ethanol are aligned with the newly revised [EN 15376](#) that has been updated in order to allow blending at all ethanol concentrations up to and including 85 % (V/V). An example is the lowering of the limit on sulfate content from 4,0 mg/kg to 2,6 mg/kg. Density minimum has been lowered from 0,760 g/m³ to 0,755 g/m³. As alignment of units for elemental contaminants is pursued, a mean density value of 0,780 g/cm³ has been used;
- in line with recent discussions in CEN/TC 19 on the dating of normative references in European fuel specifications, combined with the fact that the product specified in this document is not linked to EU Directives [1], [2], [3], dates of publication of test method standards have been removed where the CEN rules allow such;
- additional clarification on the impact of additives has been included;
- the determination of higher alcohols is now to be done by the multi-GC technique, because the O-FID technique has not been evaluated with a significant number of laboratories in the Round Robin exercise. [EN ISO 22854](#) has been revised as it needed to include an additional procedure for E85;
- determinations using [EN 15837](#) (ICP) have been deleted as it seemed to have issues with high ethanol blends;
- appearance has been added to the table of requirements;
- the newly developed determination methods for methanol, vapour pressure and sulfur content have been introduced, as well as another sampling method (EN 14725). Where necessary a referee method has been identified;
- the conductivity limit has been aligned in terms of decimal with the reporting requirement of the test method;
- on the basis that petrol blend component in line with [EN 228](#) and ethanol in line with [EN 15376](#) would be used, properties that seem to be covered by other requirements, such as solvent washed existent gum and copper, have been removed from Table 1;
- the development towards a harmonized fuel labelling under CEN/TC 441 has been acknowledged by referencing its European Standard;
- [Annex A](#) has been updated following further or pending work by WG 9 and WG 27 under CEN/TC 19;
- following applications by AFNOR, DIN and NBN, A-deviations have been accepted;
- dated references to test methods have been updated.

This is a preview of "DS/EN 15293:2018". [Click here to purchase the full version from the ANSI store.](#)

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

The quality of the fuel specified in this document is based on the assumption that ethanol and unleaded petrol fulfilling the fuel quality specification standards are used to blend automotive ethanol (E85) fuel. Product delivered to blenders is commonly known as Blending Oxygenate Base-stock (BOB). This is largely the only available petrol for blending, which meets [EN 228](#) after addition of ethanol. Examples of properties of [EN 228](#) that are only fulfilled when BOB is blended with ethanol are octane number and vapour pressure. In this version of document the requirement of [EN 228](#) quality petrol has been clarified in line with the normal blending practice—where the document has been assessed against the EU Directives[1], [2], [3] applicable to the normal fuels.

The specification has been set to allow for the use of denatured and undenatured ethanol as a blending component, depending on national legislation.

All of the determination methods have been assessed (and where necessary revised) on their applicability towards E85. The same work has concluded that the Research Octane Number (RON) of the fuel that is targeted at 104 at minimum, is achieved. A few of the determination methods referenced are still being investigated in terms of correct application and precision.

CEN is revising its Technical Report on the topic [5] to align it with discussions that have led to this revision. One major open issue that is to be explained in that revision – and which generated discussion during the revision of [CEN/TS 15293](#) – is the fact that the current sulfate limit is deemed by some to be too high to prevent injector deposit formation and would require vehicles to undergo a variable fuel type utilization program to manage the issue. The fact that the vehicle manufacturers have unanimously underlined that they see no issues in the actual market was one of the re-assuring factors to finalize this document as a European Standard. See for more explanation [CEN/TR 15993](#) [5].

This is a preview of "DS/EN 15293:2018". [Click here to purchase the full version from the ANSI store.](#)

1 Scope

This document specifies requirements and test methods for marketed and delivered automotive ethanol (E85) fuel. It is applicable to automotive ethanol (E85) fuel for use in spark ignition engine vehicles designed to run on automotive ethanol (E85) fuel.

Automotive ethanol (E85) fuel is a mixture of nominally 85 % (V/V) ethanol and unleaded petrol, but also including the possibility of having different "seasonal grades" containing more than 50 % (V/V) ethanol.

NOTE 1 — For the purposes of this document, the terms "% (m/m)" and "% (V/V)" are used to represent respectively the mass fraction and the volume fraction.

NOTE 2 — For this European Standard, A-deviations apply (see Annex C).

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies.
