Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Joint Technical Committee [ISO/IEC JTC 1](#), *Information technology*, Subcommittee SC 17, *Cards and security devices for personal identification*.

A list of all parts in the [ISO 10373](#) series can be found on the ISO website.

Replace the table with the following:

"

Explanation	Test result
Only when the PCD: — starts the bit frame anticollision loop or — resets the operating field	PASS
Any other case	FAIL

"

"

H.2.4.3.6 Procedure 5 (Detection of full bitwise anticollision loop for PICC)

This procedure is only applicable to PCDs not supporting Type A collision resolution (see Table 3).

Use the following sequence:

- a) The UT performs the activation procedure according to H.1.8.1.
- b) The LT waits until the PCD sends a valid REQA/WUPA command frame
- c) The LT answers with ATQA indicating bit frame anticollision and UID size: single (bits b8 and b7 equal (00)b).
- d) The PCD shall send ANTI COLLISION command: '93 20'.
- e) The LT answers by a stream of 40 bits by emulating a collision on every bit, including parity bits.
- f) The PCD shall reset the operating field.

Table H.13 gives part of the procedure as a scenario.

Table H.13 — Scenario H.5: Detection of full bitwise anticollision loop for PICC (Procedure 5)

Test	PCD		LT
REQA/WUPA	REQA/WUPA	→ ←	ATQA (single size UID)
ANTICOLLISION	ANTICOLLISION command ('93 20')	→ ←	40 bits full collision frame
RESET	Reset of the operating field	→	

"

H.2.4.4, Table H.13

Replace the table with the following:

"

Explanation	Test result
Only when the PCD's behavior matches each applicable procedure expected scenario	PASS
Any other case	FAIL

"
