DS projekt: M334705

ICS: 23.040.20; 91.140.80; 93.030

Første del af denne publikations betegnelse er:

DS/ISO, hvilket betyder, at det er en international standard, der har status som dansk standard.

Denne publikations overensstemmelse er:

IDT med: ISO 23856:2021

DS-publikationen er på engelsk.

DS-publikationstyper

Dansk Standard udgiver forskellige publikationstyper.

Typen på denne publikation fremgår af forsiden.

Der kan være tale om:

Dansk standard

- standard, der er udarbejdet på nationalt niveau, eller som er baseret på et andet lands nationale standard, eller
- standard, der er udarbejdet på internationalt og/eller europæisk niveau, og som har fået status som dansk standard

DS-information

- publikation, der er udarbejdet på nationalt niveau, og som ikke har opnået status som standard, eller
- publikation, der er udarbejdet på internationalt og/eller europæisk niveau, og som ikke har fået status som standard, fx en teknisk rapport, eller
- europæisk præstandard

DS-håndbog

- samling af standarder, eventuelt suppleret med informativt materiale

DS-hæfte

- publikation med informativt materiale

Til disse publikationstyper kan endvidere udgives

- tillæg og rettelsesblade

DS-publikationsform

Publikationstyperne udgives i forskellig form som henholdsvis

- fuldtekstpublikation (publikationen er trykt i sin helhed)
- godkendelsesblad (publikationen leveres i kopi med et trykt DS-omslag)
- elektronisk (publikationen leveres på et elektronisk medie)

DS-betegnelse

Alle DS-publikationers betegnelse begynder med DS efterfulgt af et eller flere præfikser og et nr., fx **DS 383**, **DS/EN 5414** osv. Hvis der efter nr. er angivet et **A** eller **Cor**, betyder det, enten at det er et **tillæg** eller et **rettelsesblad** til hovedstandard, eller at det er indført i hovedstandard.

DS-betegnelse angives på forsiden.

Overensstemmelse med anden publikation:

Overensstemmelse kan enten være IDT, EQV, NEQ eller MOD

- **IDT:** Når publikationen er identisk med en given publikation.
- **EQV:** Når publikationen teknisk er i overensstemmelse med en given publikation, men præsentationen er ændret.
- **NEQ:** Når publikationen teknisk eller præsentationsmæssigt ikke er i overensstemmelse med en given standard, men udarbejdet på baggrund af denne.
- **MOD:** Når publikationen er modificeret i forhold til en given publikation.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 138, *Plastics pipes, fittings and valves for the transport of fluids*, Subcommittee SC 6, *Reinforced plastics pipes and fittings for all applications*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 155, *Plastics piping systems and ducting systems*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This first edition cancels and replaces [ISO 10639:2017](#) (second edition) and [ISO 10467:2018](#) (second edition), which have been technically revised.

The main changes compared to the previous editions are as follows:

- documents combined;
- editorial changes throughout.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document has been produced by merging [ISO 10639](#), [ISO 10467](#), [EN 1796](#) and [EN 14364](#). As these standards were almost identical, apart from the requirements for chemical resistance of sewer pipes on the one hand, and no negative impact on water quality of drinking water pipes on the other hand, it was decided that it would be beneficial for users to be able to refer to a single document, irrespective of application or region.

The content of this document is summarized as follows:

[Clause 4](#) specifies the general aspects of GRP UP piping systems.

[Clause 5](#) specifies the characteristics of pipes made from GRP UP with or without aggregates and/or fillers. The pipes can have a thermoplastics or thermosetting resin liner. [Clause 5](#) also specifies the test parameters for the test methods referred to in this document. For pipes intended for sewer applications, the resistance to chemical attack is stated in [5.4](#). For other applications, the requirements in [5.3.4](#) apply.

[Clause 6](#) specifies the characteristics of fittings made from GRP UP, with or without a thermoplastics or thermosetting resin liner. [Clause 6](#) specifies the dimensional and performance requirements for bends, branches, reducers, saddles and flanged adaptors. [Clause 6](#) covers requirements to prove the structural design of fittings. It is applicable to fittings made using any of the following techniques:

- fabrication from straight pipes;
- moulding by
 - 1) filament winding,
 - 2) tape winding,
 - 3) contact moulding, and
 - 4) hot or cold compression moulding.

[Clause 7](#) is applicable to joints to be used in the GRP UP piping systems, both buried and non-buried. It covers requirements to prove the design of the joint. [Clause 7](#) specifies type test performance requirements for the following joints as a function of the declared nominal pressure rating of the pipeline or system:

- a) socket-and-spigot (including double-socket) joints or mechanical joints;
- b) locked socket-and-spigot joints;
- c) cemented or wrapped joints;
- d) bolted flange joints.

Plastics piping systems for pressure and non-pressure water supply, drainage or sewerage — Glass-reinforced thermosetting plastics (GRP) systems based on unsaturated polyester (UP) resin

1 Scope

This document specifies the properties of piping system components made from glass-reinforced thermosetting plastics (GRP) based on unsaturated polyester resin (UP). It is suited for all types of water supply, drainage and sewerage with or without pressure. Types of water supply include, but are not limited to, raw water, irrigation, cooling water, potable water, salt water, sea water, penstocks in power plants, processing plants and other water-based applications. This document is applicable to GRP UP piping systems, with flexible or rigid joints with or without end thrust load-bearing capability, primarily intended for use in direct buried installations.

NOTE 1 — For the purpose of this document, the term polyester resin (UP) also includes vinyl-ester resins (VE).

NOTE 2 — Piping systems conforming to this document can also be used for non-buried applications, provided the influence of the environment and the supports are considered in the design of the pipes, fittings and joints.

NOTE 3 — This document can also apply for other installations, such as slip-lining rehabilitation of existing pipes.

NOTE 4 — [ISO 10467](#) and [ISO 10639](#), which are replaced by this document, are also referenced in [ISO 25780](#), which specifies requirements for GRP-pipes used for jacking installation.

The requirements for the hydrostatic pressure design of pipes referring to this document meet the requirements of [ISO/TS 20656-1](#) and the general principle for the reliability of structures detailed in [ISO 2394](#) and in [EN 1990](#). These International Standards provide procedures for the harmonization of design practices and address the probability of failure, as well as possible consequences of failures. The design practices are based on a partial safety factor concept, as well as on risk management engineering.

This document is applicable to circular pipes, fittings and their joints of nominal sizes from DN 50 to DN 4000, which are intended to be used for the conveyance of water, sewage and drainage at normal service conditions, with or without pressure.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies.
