ADVARSEL: DS-publikationer revideres over tid. Derudover kan sådanne publikationer ændres ved rettelsesblade og/eller tillæg.

Der kan også udgives rettelsesblade, der udelukkende angår oversættelsen af en publikation. Det er derfor vigtigt at sikre sig, at man benytter en gældende udgave, medmindre fx lovgivning kræver andet. Den enkelte publikations status fremgår af

<https://webshop.ds.dk/>. Her kan man desuden tilmelde sig en gratis notifikationservice og følge en udgivet DS-publikations udvikling ved at klikke på "Følg".

En oversigt over forskellige DS-publikationstyper og -betegnelser findes her:

<https://www.ds.dk/publikationstyper>

Indholdet i dette dokument er ophavsretligt beskyttet, herunder tekst, grafik, billeder og lyd. Fonden Dansk Standard forbeholder sig udtrykkeligt alle rettigheder til at udnytte indholdet til tekst- og datamining, jf. ophavsretslovens § 11 b, stk. 2, og artikel 4 i direktiv (EU) 2019/790. Enhver udnyttelse af indholdet i dette dokument til tekst- og dataminingformål kræver forudgående skriftlig, specifik tilladelse fra Fonden Dansk Standard.

Any use of the content of this document for text and data mining purposes requires prior, written, specific permission from the Danish Standards Foundation.

EUROPÄISCHE NORM

July 2026

ICS 23.020.30

Supersedes EN 13445-3:2021+A1:2026

English Version

Unfired pressure vessels - Part 3: Design

Récipients sous pression non soumis à la flamme -
Partie 3: Conception

Unbefeuerte Druckbehälter - Teil 3: Konstruktion

This European Standard was approved by CEN on 24 June 2026.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (EN 13445-3:2026) has been prepared by Technical Committee CEN/TC 54 “Unfired pressure vessels”, the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2026, and conflicting national standards shall be withdrawn at the latest by December 2026.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 13445-3:2021+A1:2026.

Annex Y provides details of significant technical changes between this European Standard and the previous edition.

This document has been prepared under a standardization request addressed to CEN by the European Commission. The Standing Committee of the EFTA States subsequently approves these requests for its Member States.

For the relationship with EU Legislation, see informative Annex ZA, which is an integral part of this document.

A list of all parts in the EN 13445 series can be found on the CEN website.

Although these Parts may be obtained separately, it should be recognized that the Parts are interdependent. As such, the manufacture of unfired pressure vessels requires the application of all the relevant Parts in order for the requirements of the Standard to be satisfactorily fulfilled.

Corrections to the standard interpretations where several options seem possible are conducted through the Migration Help Desk (MHD). Information related to the Help Desk can be found at <https://unm.fr/en/maintenance-agencies/maintenance-agency-en-13445/>. A form for submitting questions can be downloaded from the link to the MHD website. After subject experts have agreed an answer, the answer will be communicated to the questioner. Corrected pages will be given specific issue number and issued by CEN according to CEN Rules. Interpretation sheets will be posted on the website of the MHD.

Any feedback and questions on this document should be directed to the users’ national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

This is a preview of DS/EN 13445-3:2026. [Click here to purchase the full version from the ANSI store.](#)

1 Scope

This Part of this document specifies requirements for the design of unfired pressure vessels covered by EN 13445-1:2026 and constructed of steels in accordance with EN 13445-2:2026.

EN 13445-5:2026, Annex C specifies requirements for the design of access and inspection openings, closing mechanisms and special locking elements.

This Part applies to design of vessels before putting into service. It may be used for in service calculation or analysis subject to appropriate adjustment.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this Part of this document, the terms and definitions given in EN 13445-1:2026, EN 13445-2:2026 and the following apply:

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

NOTE EN 13445-1:2026 and EN 13445-2:2026 have adopted terminology, symbols and definitions of EN 764-1:2015+A1:2016, EN 764-2:2012 and EN 764-3:2002.

³⁾ EN 1998-1:2004 is impacted by the stand-alone amendment EN 1998-1:2004/A1:2013

⁴⁾ EN 12195-1:2010 is impacted by the corrigendum EN 12195-1:2010/AC:2014

3.1**action**

imposed thermo-mechanical influence which causes stress and/or strain in a structure, e.g. an imposed pressure, force, temperature

3.2**analysis thickness**

effective thickness available to resist the loading depending on the load case, see 5.3.2

3.3**assumed thickness**

thickness assumed by the designer between the minimum required shell thickness e and the shell analysis thickness e_a

3.4**calculation pressure**

differential pressure used for the purpose of the design calculations for a component

[SOURCE: EN 764-1:2015+A1:2016]

3.5**calculation temperature**

temperature used for the purpose of the design calculations for a component

[SOURCE: EN 764-1:2015+A1:2016]

3.6**chamber**

fluid space within a unit of pressure equipment

[SOURCE: EN 764-1:2015+A1:2016]

3.7**component**

part of pressure equipment which can be considered as an individual item for the calculation

[SOURCE: EN 764-1:2015+A1:2016]

3.8**creep range**

temperature range in which material characteristics used in design are time dependent

Note 1 to entry: See also 5.1.

3.9**cryogenic applications**

applications involving liquefied gases at low temperature

This is a preview of DS/EN 13445-3:2026. [Click here to purchase the full version from the ANSI store.](#)

3.10**design pressure**

pressure at the top of each chamber of the pressure equipment chosen for the derivation of the calculation
pressure of each component

[SOURCE: EN 764-1:2015+A1:2016]

Note 1 to entry: Any other location may be specified.

3.11**design temperature**

temperature chosen for the derivation of the calculation temperature of each component

[SOURCE: EN 764-1:2015+A1:2016]

3.12**differential pressure**

pressure which algebraic value is equal to the pressure difference on either side of a separation wall

[SOURCE: EN 764-1:2015+A1:2016]

3.13**governing weld joint**

main full penetration butt joint the design of which, as a result of membrane stresses, governs the thickness of the component

3.14**load case**

combination of coincident actions

3.15**main joint**

weld joint assembling main pressure bearing parts

3.16**maximum permissible pressure**

maximum pressure obtained from the design by formulae or relevant procedures of EN 13445-3:2026 for a given component in a given load case, or for the whole pressure vessel the minimum of these maximum permissible pressures of all components

Note 1 to entry: The differences of the nominal design stress f , the analysis thickness e_a and the joint coefficient z for the calculation of the maximum permissible pressure in different load cases are specified in 5.3.2.

Note 2 to entry: If no explicit formula is given for the maximum permissible pressure $P_{\max}$ then $P_{\max}$ may be calculated as pressure which gives the required thickness equal to the analysis thickness.

Note 3 to entry: The maximum permissible pressure $P_{\max}$ used for the simplified assessment of fatigue life in Clause 17 and for the calculation of the equivalent full pressure in 5.4.2 is calculated for normal operating load cases.

3.17**minimum possible fabrication thickness**

minimum possible thickness after fabrication

This is a preview of DS/EN 13445-3:2026. [Click here to purchase the full version from the ANSI store.](#)

3.18

nominal design stress

stress value to be used in the formulae for the calculation of pressure components

3.19

nominal thickness

thickness as specified on the drawings

3.20

test pressure

pressure to which the equipment is subjected for test purposes

[SOURCE: EN 764-1:2015+A1:2016]

3.21

test temperature

temperature at which the pressure test of the pressure equipment is carried out

[SOURCE: EN 764-1:2015+A1:2016]

3.22

volume

internal volume of a chamber, including the volume of nozzles to the first connection (flange, coupling, weld) and excluding the volume of internal permanent parts (e.g. baffles, agitators)

[SOURCE: EN 764-1:2015+A1:2016]

3.23

weld throat thickness of a fillet weld

height of the inscribed isosceles triangle measured from the theoretical root point
