American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board Of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute, 11 W. 42nd Street, New York, New York, 10036, Phone: 212-642-4900, Fax: 212-398-0023.

FOREWORD (This Foreword is not a part of American National Standard Z245.41 - 2008)

This standard establishes safety requirements for the design, manufacture, construction, modification, maintenance and operation of facilities used in the processing of commingled wastes and recyclable materials. It is a revision of the original safety standard, approved and published in 1997. It does not cover other types of facilities such as, waste-to-energy plants, scrap processing facilities, transfer stations, or mixed waste processing facilities, unless there is a commingled processing operation as part of these facilities. In those cases, this standard covers only the part of the facility, which performs the processing of commingled materials.

This standard was developed and revised by ANSI Accredited Standards Committee Z245 Subcommittee 4 on Facility Safety. Representatives from the following organizations also participated in the preparation of the standard and assisted the committee: The Waste Equipment Technology Association (WASTEC) (formerly the Waste Equipment Manufacturers Institute and the Institute of Waste Equipment Distributors) Processing Equipment Project Working Group, representatives of independent manufacturers, end-users, consultants, and equipment distributors.

Inquiries, requests for interpretation, and suggestions for improvement of this standard should be directed to the Secretary, Accredited Standards Committee Z245, c/o Environmental Industry Associations, 4301 Connecticut Avenue, NW, Suite 300, Washington, DC 20008.

This standard was processed and approved for submittal to ANSI by the Accredited Standards Committee on Equipment Technology and Operations for Wastes and Recyclable Materials, Z245. Committee approval of this standard does not necessarily imply that all members voted for its approval. At the time it approved this standard, the Z245 Committee had the following members:

Gary Satterfield, Chairman

Lou Guilmette	City of Rochester
Karon Simoni (Alternate)	City of Rochester
Carl Hursh	Commonwealth of Pennsylvania (DEP)
Gary Satterfield	Waste Equipment Technology Association
John Gilstrap	Institute of Scrap Recycling Industries, Inc.
Brent Dieleman	Solid Waste Association of North America
Paul Moore	NIOSH
Ralph A. Ford	Waste Industries
Michael L. Knaub	Schaefer Systems International, Inc.
Jerald G. Zanzig	Zantec, Inc.
Denny Gill	Ameri-Kan
Thomas Stevens	Wolverine Recycling Services, Inc.
Denny Pool	SP Industries, Inc.
Steven M. Wienkes	Environmental Equipment Solutions
David E. Malter	Malter Associates, Inc.
W.A. Martin	Waste Management, Inc.
Susan Eppes	EST Solutions, Inc.
Gerald Van Beek	SACOM Safety Communications
Jeffrey D. Kaplan	City of Corpus Christi
Mark Johnson (Alternate)	Allied Waste Industries, Inc.
Garry Mosier, CSP	Allied Waste Industries, Inc.
Mike Schwalbach	Rehrig Pacific Company
Dave Carlisle	City of Tacoma

Accredited Standards Committee Z245 Subcommittee 4 on Facility Safety, which provided the draft of this standard to Z245 Committee, had the following members:

Susan Eppes, Chairman

Ralph A. Ford
Henry Jobe
Denny Pool
Kent Spiers
Jerry Van Beek

American National Standard
for Equipment Technology and Operations
for Wastes and Recyclable Materials —

Facilities for the Processing of Commingled
Recyclable Materials —
Safety Requirements

1 Scope and purpose

1.1 Scope

This American National Standard is applicable to all persons who design, manufacture, assemble, modify, operate, clean, maintain, service, or repair material recovery facilities (MRFs) which engage in receiving, storing, and processing commingled recyclable materials which have been previously collected or otherwise diverted from the solid waste stream. This standard does not apply to scrap processing facilities (North American Industry Classification system code number 42193, formerly Standard Industrial Classification number 5093), unless the scrap processing facility operates a MRF, which MRF would then be subject to this standard.

The safety requirements are divided into 7 sections and are applicable as described in 1.1.1 through 1.1.3.

1.1.1 Sections 1 through 3 provide general information and definitions and shall apply to all material recovery facilities (MRFs) covered by this standard.

1.1.2 Sections 4 through 6 provide for physical plant, processing machinery and mobile equipment requirements that shall apply to both new and existing MRFs.

1.1.3 Section 7 provides for safety programs and safety requirements that shall apply to both new and existing MRFs.

1.2 Purpose

This standard establishes safety requirements with respect to the design, manufacture, installation, reconstruction, modification, maintenance, and operation of facilities for the processing of commingled recyclable materials.

1.3 Effective date

The effective date of sections four, five, and six of this standard for existing facilities shall be two (2) years after the approval date of this standard by the American National Standards Institute. Training and employer requirements sections shall be effective six (6) months after the approval date of this standard. All facilities placed in operation eighteen (18) months after the approval date of this standard shall be designed, constructed and operated in accordance with the requirements of this standard.
