American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute, 11 W. 42nd Street, New York, New York, 10036, Phone: 212-642-4900, Fax: 212-398-0023.

FOREWORD (This Foreword is not a part of American National Standard Z245.42 – 2012)

This standard establishes safety requirements for the design, manufacture, construction, modification, maintenance and operation of waste transfer stations used in the collection, storage, and the eventual transportation of commingled wastes and recyclable materials.

This standard was developed by the Z245 Subcommittee 4 on Facilities.

The effective date of Sections 4 through 9 of this standard for existing facilities shall be eighteen (18) months after the approval date of this standard by the American National Standards Institute. Training and employer requirements sections shall be effective six (6) months after the approval date of this standard. All facilities placed in operation eighteen (18) months after the approval date of this standard shall be designed, constructed, and operated in accordance with the requirements of this standard.

Inquiries, requests for interpretation, and suggestions for improvement of this standard should be directed to the Secretary, Accredited Standards Committee Z245, c/o Environmental Industry Associations, 4301 Connecticut Avenue, NW, Suite 300, Washington, DC 20008.

This standard was processed and approved for submittal to ANSI by the Accredited Standards Committee on Equipment Technology and Operations for Wastes and Recyclable Materials, Z245. Committee approval of this standard does not necessarily imply that all members voted for its approval. At the time it approved this standard, the Z245 Committee had the following members:

Susan Eppes, Chairman
Gerald Zanzig, Vice-Chairman
Janice Comer Bradley, Secretary

American National Standard
for Equipment Technology and Operations
for Wastes and Recyclable Materials—

Waste Transfer Station —
Safety Requirements

Introduction

This standard was developed by Accredited Standards Committee Z245 Subcommittee 4 on Facilities and approved by American National Standards Institute Accredited Standards Committee Z245.

This standard establishes safety requirements with respect to the design, manufacture, installation, reconstruction, modification, maintenance, and operation of waste transfer station facilities for the collection, storage, processing, and eventual transportation of solid waste and recyclable materials.

The requirements contained in this standard pertain to the designers, owners, operators, employees and customers of waste transfer stations.

Where transfer stations and material recovery facilities are co-located, the material storage requirements in Z245.41 shall apply.

Exceptions and notes contained in the standard apply to the clause or sub-clause in which they are contained or to which they reference. Exceptions pertain to normative requirements. Notes are informative and provide guidance for the evaluation of a normative requirement.

The units of distance measurement used in this standard are in the inch-pound system. When a value for measurement is followed by a value in other units in parentheses (metric) the second value is only approximate. The first value is the requirement.

1. Scope

1.1 This American National Standard is applicable to all persons who design, manufacture, assemble, modify, operate, clean, maintain, service, repair, or use transfer station facilities that engage in collecting, receiving, storing, processing, and eventual transportation of solid waste and recyclable materials. For purposes of this standard, a waste transfer station shall be deemed a facility with a tipping floor and may or may not also provide for a public drop-off area for solid waste.

1.2 Sections 1 through 3 provide general information and definitions and shall apply to all waste transfer stations covered by this standard.

1.3 Sections 4 through 6 provide for physical plant, processing machinery and mobile equipment requirements that shall apply to both new and existing waste transfer stations.

1.4 Section 7 provides for safety programs and safety requirements that shall apply to both new and existing waste transfer stations.
