ESD Association Standard Test Method for the Protection of Electrostatic Discharge Susceptible Items

Seating – Resistance Measurements

Approved May 29, 2019 EOS/ESD Association, Inc.

CAUTION NOTICE	Electrostatic Discharge Association (ESDA) standards and publications are designed to serve the public interest by eliminating misunderstandings between manufacturers and purchasers, facilitating the interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining the proper product for his particular needs. The existence of such standards and publications shall not in any respect preclude any member or non-member of the Association from manufacturing or selling products not conforming to such standards and publications. Nor shall the fact that a standard or publication that is published by the Association preclude its voluntary use by non-members of the Association whether the document is to be used either domestically or internationally. Recommended standards and publications are adopted by the ESDA in accordance with the ANSI Patent policy.
	Interpretation of ESDA Standards: The interpretation of standards in-so-far as it may relate to a specific product or manufacturer is a proper matter for the individual company concerned and cannot be undertaken by any person acting for the ESDA. The ESDA Standards Chairman may make comments limited to an explanation or clarification of the technical language or provisions in a standard, but not related to its application to specific products and manufacturers. No other person is authorized to comment on behalf of the ESDA on any ESDA Standard.
DISCLAIMER OF WARRANTIES	THE CONTENTS OF ESDA'S STANDARDS AND PUBLICATIONS ARE PROVIDED "AS-IS," AND ESDA MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED, OF ANY KIND WITH RESPECT TO SUCH CONTENTS. ESDA DISCLAIMS ALL REPRESENTATIONS AND WARRANTIES, INCLUDING WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR USE, TITLE, AND NON-INFRINGEMENT.
DISCLAIMER OF GUARANTY	ESDA STANDARDS AND PUBLICATIONS ARE CONSIDERED TECHNICALLY SOUND AT THE TIME THEY ARE APPROVED FOR PUBLICATION. THEY ARE NOT A SUBSTITUTE FOR A PRODUCT SELLER'S OR USER'S OWN JUDGEMENT WITH RESPECT TO ANY PARTICULAR PRODUCT DISCUSSED, AND ESDA DOES NOT UNDERTAKE TO GUARANTEE THE PERFORMANCE OF ANY INDIVIDUAL MANUFACTURERS' PRODUCTS BY VIRTUE OF SUCH STANDARDS OR PUBLICATIONS. THUS, ESDA EXPRESSLY DISCLAIMS ANY RESPONSIBILITY FOR DAMAGES ARISING FROM THE USE, APPLICATION, OR RELIANCE BY OTHERS ON THE INFORMATION CONTAINED IN THESE STANDARDS OR PUBLICATIONS.
LIMITATION ON ESDA's LIABILITY	NEITHER ESDA, NOR ITS PRESENT OR FORMER MEMBERS, OFFICERS, EMPLOYEES OR OTHER REPRESENTATIVES WILL BE LIABLE FOR DAMAGES ARISING OUT OF, OR IN CONNECTION WITH, THE USE OR MISUSE OF ESDA STANDARDS OR PUBLICATIONS, EVEN IF ADVISED OF THE POSSIBILITY THEREOF. THIS IS A COMPREHENSIVE LIMITATION OF LIABILITY THAT APPLIES TO ALL DAMAGES OF ANY KIND, INCLUDING WITHOUT LIMITATION, LOSS OF DATA, INCOME OR PROFIT, LOSS OF OR DAMAGE TO PROPERTY AND CLAIMS OF THIRD PARTIES.

FOREWORD

This standard test method¹ is intended to provide test methods for evaluating seating used in an ESD control program. This standard test method covers all types of seating, including chairs and stools.

This standard test method is limited to defining procedures for measuring electrical resistance. Electrical resistance is one property that can be used to evaluate the electrostatic dissipation of seating intended for use in ESD controlled areas. Resistance, however, does not fully characterize seating. An additional property to be considered in the selection and use of seating includes triboelectric charge generation.

One source of electrostatic charge generation in a work environment is the separation of personnel from chairs, stools or other types of seating along with the movement of seating across the floor. This results in the generation of electrostatic charge that can accumulate on the seating and on personnel. The effect of this generation and accumulation of electrostatic charge can be minimized with the appropriate selection of seating.

To effectively control electrostatic discharge, seating must be used in combination with an ESD controlled floor or mat. Seating is not a primary means of controlling electrostatic charge buildup on personnel in an ESD protective work area. Personal wrist straps or other means of personnel grounding should be used for this purpose.

In the current revision of ANSI/ESD STM12.1, an alternative test methodology has been introduced that allows a significant reduction of the measurements. Instead of measuring the resistance of all test points against all groundable points, if the groundable points are electrically connected, one groundable point can be selected as representative for all measurements.

This document was originally designated ESD STM12.1-1997 and approved on September 20, 1997. ANSI/ESD STM12.1-2006 was a reaffirmation of ESD STM12.1-1997 and was approved on February 26, 2006. ANSI/ESD STM12.1-2013 is a revision of ANSI/ESD STM12.1-2006 and was approved on July 15, 2013. ANSI/ESD STM12.1-2019 is a revision of ANSI/ESD STM12.1-2013 and was approved on May 29, 2019.

At the time ANSI/ESD STM12.1-2019 was prepared, the 12.0 Seating Subcommittee had the following members:

Wolfgang Stadler, Chair Intel Deutschland GmbH

David N. Girard Staticon Support Services John Kinnear IBM Michael J. Manders Air Force Research Laboratory

Andy Nold Teradyne

¹ Standard Test Method (STM): A definitive procedure for the identification, measurement and evaluation of one or more qualities, characteristics or properties of a material, product, system or process that yield a **reproducible test** result.

The following individuals contributed to the development of ANSI/ESD STM12.1-1997 and/or ANSI/ESD STM12.1-2013:

ESD Association Standard Test Method

ANSI/ESD STM12.1-2019

ESD Association Standard Test Method for the Protection of Electrostatic Discharge Susceptible Items – Seating – Resistance Measurement

1.0 PURPOSE, SCOPE, AND APPLICATION

1.1 Purpose

This document provides test methods for measuring the electrical resistance of seating used in an ESD control program. This standard test method provides test methods for the qualification of seating prior to installation or application.

1.2 Scope

The test methods established here are designed to measure the resistance of seating. The resistances considered here are measured from various components of the seating to a groundable point, such as a conductive caster or a drag chain. Resistivity measurements are not within the scope or purpose of this standard test method.

1.3 Application

This document relies on resistance measurements utilizing standard instruments as defined in Section 5.0, to provide a means of evaluating seating.

This document does not apply to electrically initiated explosive devices, flammable liquids, or powders.

2.0 REFERENCED DOCUMENTS

ESD ADV1.0, ESD Association's Glossary of Terms²

ANSI/ESD STM11.11, Surface Resistance Measurement of Static Dissipative Planar Materials² ANSI/ESD S20.20, Development of an Electrostatic Discharge Control Program²

ESD TR53, Compliance Verification²

ASTM D257, Standard Test Method for D-C Resistance or Conductance of Insulating Materials³

3.0 DEFINITIONS

The terms used in the body of this document are in accordance with the definitions found in ESD ADV1.0, ESD Association's Glossary of Terms available for complimentary download at www.esda.org.

4.0 PERSONNEL SAFETY

THE PROCEDURES AND EQUIPMENT DESCRIBED IN THIS DOCUMENT MAY EXPOSE PERSONNEL TO HAZARDOUS ELECTRICAL CONDITIONS. USERS OF THIS DOCUMENT ARE RESPONSIBLE FOR SELECTING EQUIPMENT THAT COMPLIES WITH APPLICABLE LAWS, REGULATORY CODES, AND BOTH EXTERNAL AND INTERNAL POLICY. USERS ARE CAUTIONED THAT THIS DOCUMENT CANNOT REPLACE OR SUPERSEDE ANY REQUIREMENTS FOR PERSONNEL SAFETY.
