## **Caution Notice**

---

ESD Association standards and publications are designed to serve the public interest by (i) eliminating misunderstandings between manufactures and purchasers, (ii) facilitating the interchangeability and improvement of products and (iii) assisting the purchaser in selecting and obtaining the proper products for his particular needs. The existence of such standards and publications is not intended in any respect to preclude any member or nonmember of the Association from manufacturing or selling products not conforming to such standards and publications. Nor is it intended for a standard or publication published by the Association to preclude its voluntary use by non-members of the Association whether the document is to be used either domestically or internationally. Recommended standards and publications are adopted by the ESD Association without intending to infringe upon any intellectual property rights of third parties with respect to articles, materials or processes described in such standards. The Association does not assume any liability to any intellectual property owner, nor does it assume any obligation whatever to other parties following the recommended standard or publication.

A Technical Report is a collection of technical data or test results published as an informational reference on a specific material, product, system or process. The opinions expressed in this Technical Report are the opinions of the author(s) and may or may not be endorsed by the ESD Association.

**Measurement and ESD Control Issues for Automated Equipment  
Handling of ESD Sensitive Devices Below 100 Volts**

**Foreword**

With the current drive in the electronics industry to make ever faster, smaller devices, the need has arisen for Electrostatic Charge prevention and ESD protection to lower voltage levels than previously thought necessary. This document provides guidance and considerations that an equipment manufacturer should use when designing automated handling equipment for these low voltage sensitive devices.

This Technical Report was developed by the ESD Association's Standards Working Group 10-"Automated Handlers". At the time this Technical Report was approved the Handlers Committee had the following members:

**Joe Bernier, Chair  
Intersil**

Tom Albano  
Eastman Kodak

Donn Bellmore  
Universal Instruments

Don Boehm  
Dou Yee Enterprises

Brent Howard  
Shuttleworth

John Kinnear  
IBM

Charles Perry  
Monroe Electronics

Donn Pritchard  
Trek, Inc.

Arnold Steinman  
ION

Craig Zander  
Restronics
