Approved September 23, 2008

American National Standards Institute, Inc.

American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Contents

		Page
Foreword .		vii
2.3	Design and application	1
2.3.1	Scope	1
2.3.1.1	Preferred units for pump applications	
2.3.1.2	Specific speed and suction specific speed	
2.3.1.3	Introduction to pump classifications	
2.3.2	Impeller types	
2.3.3	Mechanical features	
2.3.3 2.3.3.1	Radial thrust	
2.3.3.1	Axial thrust	
2.3.3.3	Shafting	
2.3.3.4	Open lineshaft and enclosed lineshaft	
2.3.3.5	Types of bearing bushings and spacing	
2.3.3.6	Lubrication systems	
2.3.3.7	Shaft seals	
2.3.3.8	Nozzle loading	
2.3.3.9	System piping and foundation	
2.3.3.10	Reed frequency	
2.3.3.11	Motor/Driver interface	26
2.3.4	Pump performance, selection criteria	31
2.3.4.1	Pumping system requirements	31
2.3.4.2	Pump versus system curves	31
2.3.4.3	System pressure limitation	
2.3.4.4	Reverse runaway speed	
2.3.4.5	Water (hydraulic) hammer analysis	
2.3.4.6	Start-up and shut-down analysis	
2.3.4.7	Pump and motor speed torque curves	
2.3.4.8	Predicting pump performance after speed of rotation or impeller diameter change	
2.3.4.9	Determining operating range, series and parallel operation	
2.3.4.10	Range of operation	
2.3.4.11	Continuous, intermittent, and cyclic service	
2.3.4.12	Operation away from BEP flow	
2.3.4.13	Intake design and submergence	
2.3.4.14	Suction piping and cans	
2.3.4.15	Net positive suction head available (NPSHA)	
2.3.4.16	NPSHA corrections for temperature and elevation	
2.3.4.17	NPSH margin considerations	
2.3.4.18	NPSH requirements for pumps handling hydrocarbon liquids and water at	
	elevated temperatures	46
2.3.4.19	Effects of handling viscous liquids	
2.3.4.20	Losses	
2.3.5	Sound levels (dBA)	
A !!	Described (Conference Learner) and the Conference (Conference Learner)	
Appendix A		
A.1	Introduction to pump classifications	
A.2	Two-phase flow: Liquids with gas	
A.3	Effect of gas on performance	
A.4	Vertical pumps used as hydraulic turbines	
A.5	Rotative speed considerations	57

Foreword (Not part of Standard)

The purpose and aims of the Institute are to promote the continued growth of pump knowledge for the interest of pump users and manufacturers and to further the interests of the public in such matters as are involved in manufacturing, engineering, distribution, safety, transportation and other problems of the industry, and to this end, among other things:

- a) To develop and publish standards for pumps;
- b) To collect and disseminate information of value to its members and to the public;
- c) To appear for its members before governmental departments and agencies and other bodies in regard to matters affecting the industry;
- d) To increase the amount and to improve the quality of pump service to the public;
- e) To support educational and research activities;
- f) To promote the business interests of its members but not to engage in business of the kind ordinarily carried on for profit or to perform particular services for its members or individual persons as distinguished from activities to improve the business conditions and lawful interests of all of its members.

Purpose of Standards

- Hydraulic Institute Standards are adopted in the public interest and are designed to help eliminate misunderstandings between the manufacturer, the purchaser and/or the user and to assist the purchaser in selecting and obtaining the proper product for a particular need.
- Use of Hydraulic Institute Standards is completely voluntary. Existence of Hydraulic Institute Standards
 does not in any respect preclude a member from manufacturing or selling products not conforming to the
 Standards.

Definition of a Standard of the Hydraulic Institute

Quoting from Article XV, Standards, of the By-Laws of the Institute, Section B:

"An Institute Standard defines the product, material, process or procedure with reference to one or more of the following: nomenclature, composition, construction, dimensions, tolerances, safety, operating characteristics, performance, quality, rating, testing and service for which designed."

Comments from users

Comments from users of this Standard will be appreciated, to help the Hydraulic Institute prepare even more useful future editions. Questions arising from the content of this Standard may be sent to the Hydraulic Institute. The inquiry will then be directed to the appropriate technical committee for provision of a suitable answer.

If a dispute arises regarding the content of an Institute Standard or an answer provided by the Institute to a question such as indicated above, the point in question shall be sent in writing to the Technical Director of the Hydraulic Institute, who shall initiate the Appeals Process.

Revisions

The Standards of the Hydraulic Institute are subject to constant review, and revisions are undertaken whenever it is found necessary because of new developments and progress in the art. If no revisions are made for five years, the standards are reaffirmed using the ANSI canvass procedure.

Units of measurement

Metric units of measurement are used; and corresponding US customary units appear in brackets. Charts, graphs and sample calculations are also shown in both metric and US customary units. Since values given in metric units
