Analogue audio disk records and reproducing equipment
CONTENTS

FOREWORD ................................................................................................................................... 5

1 Scope ......................................................................................................................................... 8

2 Normative references ................................................................................................................ 7

3 Terms and definitions ................................................................................................................ 7

4 General ....................................................................................................................................... 8

4.1 Scales for graphical presentation of data .............................................................................. 8

4.2 Scales for frequency characteristics ................................................................................. 8

5 The disk ...................................................................................................................................... 8

5.1 Types of disk records ........................................................................................................... 8

5.2 Dimensions of disks ............................................................................................................ 9

5.3 Unbalance of disks ................................................................................................................ 10

5.4 Direction of rotation ............................................................................................................ 11

5.5 Direction of recording ......................................................................................................... 11

5.6 Speed of rotation ................................................................................................................ 11

6 The groove ................................................................................................................................ 11

6.1 Direction of groove modulation .......................................................................................... 11

6.2 Arrangement of stereophonic channels .............................................................................. 12

6.2.1 Channel orientation ....................................................................................................... 12

6.2.2 Channel phasing ........................................................................................................... 12

6.2.3 Channel levels .............................................................................................................. 12

6.2.4 Channel polarity .......................................................................................................... 12

6.3 Groove dimensions ............................................................................................................. 12

6.4 Lead-in groove .................................................................................................................... 12

6.5 Outer diameter of recorded surface .................................................................................... 12

6.6 Eccentricity of groove spiral .............................................................................................. 12

6.7 Marker space ....................................................................................................................... 13

6.8 Lead-out groove .................................................................................................................. 13

6.9 Finishing groove .................................................................................................................. 13

7 Label information ..................................................................................................................... 13

8 Recording and reproducing characteristics ........................................................................... 13

8.1 Recording characteristic ...................................................................................................... 13

8.1.1 Standard recording characteristic .................................................................................. 13

8.1.2 Recording chain tolerances ............................................................................................ 14

8.2 Reproducing characteristic ................................................................................................ 14

8.2.1 Standard reproducing characteristic .............................................................................. 14

8.2.2 Reproducing chain tolerances ........................................................................................ 15

9 Reproducing equipment ......................................................................................................... 15

9.1 Speed of rotation ................................................................................................................ 15

9.2 Automatic pickup lifting ..................................................................................................... 15

9.3 Reproducing stylus .............................................................................................................. 15

9.3.1 Clearances ..................................................................................................................... 15

9.3.2 Included angle (spherical styli only) .............................................................................. 15

9.3.3 Stylus rake (non-spherical styli only) ............................................................................ 16

9.4 Arrangement of stereophonic channels .............................................................................. 16

9.4.1 Channel orientation ....................................................................................................... 16
9.4.2  Channel phasing ............................................................................................................. 16
9.4.3  Channel gain .................................................................................................................... 16
9.4.4  Channel polarity .............................................................................................................. 16
9.5  Interchangeability of pickup cartridges ............................................................................. 16
9.5.1  Dimensions ...................................................................................................................... 16
9.5.2  Colour coding of connecting wires between pickup cartridge and pickup arm .................. 17
9.5.3  Colour coding or marking of pickup cartridge terminals ................................................. 17
10  Measurements ......................................................................................................................... 17
10.1  Standard measurement conditions .................................................................................... 17
10.1.1  General .......................................................................................................................... 17
10.1.2  Environment .................................................................................................................... 18
10.1.3  Electric power supply ..................................................................................................... 18
10.1.4  Pickup operation ............................................................................................................. 18
10.1.5  Test records .................................................................................................................... 18
10.2  Methods of measurement .................................................................................................... 18
10.2.1  General .......................................................................................................................... 18
10.2.2  Maximum apparent power consumption ....................................................................... 19
10.2.3  Mean deviation from rated speed .................................................................................... 19
10.2.4  Wow and flutter .............................................................................................................. 20
10.2.5  Maximum start time to reach actual or rated speed ....................................................... 20
10.2.6  Signal/rumble ratio ....................................................................................................... 20
10.2.7  Signal/hum ratio ............................................................................................................. 21
10.2.8  Channel sensitivity at 1 000 Hz ..................................................................................... 22
10.2.9  Channel unbalance at 1 000 Hz (stereo use only) ......................................................... 22
10.2.10 Separation at 1 000 Hz (stereo use only) ...................................................................... 23
10.2.11 Frequency response ...................................................................................................... 23
10.2.12 Tracking ability .............................................................................................................. 24
11  Information required from manufacturers of record playing units ........................................ 25

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ANALOGUE AUDIO DISK RECORDS AND REPRODUCING EQUIPMENT

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.

2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.

3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.

4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.

5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.

6) All users should ensure that they have the latest edition of this publication.

7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.

8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.

9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60098 has been prepared by IEC technical committee 100: Audio, video and multimedia systems and equipment.

This fourth edition cancels and replaces the third edition published in 1987. This edition constitutes a full revision.

This edition includes the following significant technical changes with respect to the previous edition:

a) addition of a tolerance on groove width.

The text of this International Standard is based on the following documents:

<table>
<thead>
<tr>
<th>CDV</th>
<th>Report on voting</th>
</tr>
</thead>
<tbody>
<tr>
<td>100/3261/CDV</td>
<td>100/3331/RVC</td>
</tr>
</tbody>
</table>

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.
The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.
ANALOGUE AUDIO DISK RECORDS AND REPRODUCING EQUIPMENT

1 Scope

This document applies to analogue audio disk records and the corresponding professional and domestic reproducing equipment. It excludes amplifiers and loudspeakers, methods of measurement for which can be found in IEC 60268-3, IEC 60268-5, IEC 60268-21 and IEC 60268-221.

This document specifies the characteristics that are necessary to ensure compatibility between analogue audio disk records and the corresponding reproducing equipment.

It also lists and defines the most important characteristics affecting the performance of reproducing equipment, and establishes agreed methods of measurement for these characteristics.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050-806:1996/AMD2:2018
