

INTERNATIONAL STANDARD

**Automatic electrical controls -
Part 2-9: Particular requirements for temperature sensing controls**

This is a preview of IEC 60730-2-9 Ed. 5.0 en:2026. [Click here to purchase the full version from the ANSI store.](#)

FOREWORD	3
1 Scope	6
2 Normative references	7
3 Terms and definitions	7
4 General	9
5 Required technical information	10
6 Protection against electric shock	11
7 Provision for protective earthing	11
8 Terminals and terminations.....	11
9 Constructional requirements	11
10 Threaded parts and connections.....	16
11 Creepage distances, clearances and distances through solid insulation.....	17
12 Components	17
13 Fault assessment on electronic circuits.....	17
14 Moisture and dust resistance	17
15 Electric strength and insulation resistance	18
16 Heating.....	18
17 Manufacturing deviation and drift.....	19
18 Environmental stress	19
19 Endurance	19
20 Mechanical strength	24
21 Resistance to heat, fire and tracking.....	25
22 Resistance to corrosion	25
23 Electromagnetic compatibility (EMC) requirements – Emission	25
24 Normal operation	25
25 Electromagnetic compatibility (EMC) requirements – Immunity	25
26 Abnormal operation tests.....	25
Annex G (normative) Resistance to heat, fire and tracking tests	27
Annex H (normative) Requirements related to functional safety	28
Annex J (normative) Requirements for thermistor elements and controls using thermistors.....	37
Annex Q (informative) Regional differences relevant to the member countries of Cenelec	38
Annex R (informative) National differences relevant in the United States of America.....	39
Annex S (informative) National differences relevant in Japan	40
Annex T (informative) National differences relevant in Canada	41
Annex AA (informative) Maximum manufacturing deviation and drift ^{a, b}	42
Annex BB (normative) Time factor	43
Annex CC (normative) Number of cycles.....	47
Annex DD (normative) Controls for use in agricultural confinement buildings	48
Annex EE (informative) Guide to the application of temperature sensing controls within the scope of IEC 60730-2-9	51

This is a preview of IEC 60730-2-9 Ed. 5.0 en:2026. [Click here to purchase the full version from the ANSI store.](#)

Figure 101 – Impact tool	15

Figure BB.1 – Determination of time factor in the case of a sudden temperature change	44
Figure BB.2 – Determination of time factor in the case of a linear rise of test-bath temperature	45
Figure EE.1 – Thermostat	61
Figure EE.2 – Self-resetting temperature limiter	62
Figure EE.3 – Non-self-resetting temperature limiter	62
Figure EE.4 – Self-resetting thermal cut-out	64
Figure EE.5 – Manual reset thermal cut-out	64
Figure EE.6 – Single-operation device	66
Figure EE.7 – Three-stage control system	67
Figure EE.8 – Schematic diagram showing usage of various controls approved to IEC 60730-2-9	69
Table 1 – Required technical information and methods of providing these information	10
Table H.1 – Additional items to Table 1	28
Table AA.1 – Recommended values of manufacturing deviation and drift	42
Table BB.1 – Method to determine and verify time factor values (see 9.101)	46
Table CC.1 – Number of cycles for independently mounted and in-line cord controls	47
Table EE.1 – Typical examples of the classification of temperature sensing controls in accordance with IEC 60730-2-9	67
Table EE.2 – Examples of controls expected to operate during IEC 60335 series, Clause 11 and Clause 19	70
Table EE.3 – Guidance on the common usage of types of control	71

Automatic electrical controls - Part 2-9: Particular requirements for temperature sensing controls

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60730-2-9 has been prepared by IEC technical committee 72: Automatic electrical controls. It is an International Standard.

This fifth edition cancels and replaces the fourth edition published in 2015, Amendment 1:2018 and Amendment 2:2020. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) adoption of IEC 60730-1:2022 with all of its significant changes to IEC 60730-1:2013, IEC 60730-1:2013/AMD1:2015 and IEC 60730-1:2013/AMD2:2020.

Draft	Report on voting
72/1534/FDIS	72/1540/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

This part 2-9 is intended to be used in conjunction with IEC 60730-1. It was established on the basis of the sixth edition of that standard (2022). Consideration can be given to future editions of, or amendments to, IEC 60730-1.

This part 2-9 supplements or modifies the corresponding clauses in IEC 60730-1, so as to convert that publication into the IEC standard: Particular requirements for temperature sensing controls.

Where this part 2-9 states "addition", "modification" or "replacement", the relevant requirement, test specification or explanatory matter in part 1 should be adapted accordingly.

When a particular subclause of Part 1 is not mentioned in this Part 2, that subclause applies.

In the development of a fully international standard it has been necessary to take into consideration the differing requirements resulting from practical experience in various parts of the world and to recognize the variation in national electrical systems and wiring rules.

The reader's attention is drawn to the fact that Annex R, Annex S and Annex T list all of the "in-some-country" clauses on differing practices of a less permanent nature relating to the subject of this document.

In this publication:

The following print types are used:

- requirements proper: in roman type;
- *test specifications: in italic type*;
- explanatory matter: in smaller roman type;
- Defined terms: **bold type**.

Subclauses, notes or items which are additional to those in Part 1 are numbered starting from 101, additional annexes are lettered AA, BB, etc.

A list of all parts of the IEC 60730 series, under the general title: *Automatic electrical controls*, can be found on the IEC website.

This is a preview of IEC 60730-2-9 Ed. 5.0 en:2026. [Click here to purchase the full version from the ANSI store.](#)

stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

This clause of Part 1 is replaced by the following:

This document applies to temperature sensing controls

- for use in, on, or in association with equipment for household appliance and similar use, including equipment for heating, air-conditioning and similar applications. The equipment can use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof.

NOTE 1 Throughout this document, the word "equipment" means "appliance and equipment" and "controls" means "temperature sensing controls".

- for building automation within the scope of ISO 16484 series and IEC 63044 series (HBES/BACS);

EXAMPLE 1 Independently mounted temperature sensing controls, controls in smart grid systems and controls for building automation systems within the scope of ISO 16484-2.

- for equipment that is used by the public, such as equipment intended to be used in shops, offices, hospitals, farms and commercial and industrial applications;

EXAMPLE 2 Controls for commercial catering, heating and air-conditioning equipment.

- that are **smart enabled controls**;

EXAMPLE 3 Smart grid control, remote interfaces/control of energy-consuming equipment including computer or smart phone.

- that are AC or DC powered controls with a rated voltage not exceeding 690 V AC or 600 V DC;
- used in, on, or in association with equipment that use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof;
- utilized as part of a control system or controls which are mechanically integral with multifunctional controls having non-electrical outputs;
- using NTC or **PTC thermistors** and to discrete **thermistors**, requirements for which are contained in Annex J;
- that have electrical circuits and **control** circuits which are, for example, operated by bimetals, magnet coils, memory metals, pressure elements, temperature-sensitive expansion elements or electronic elements.
- as well as manual controls when such are electrically and/or mechanically integral with automatic controls.

NOTE 2 Requirements for manually actuated mechanical switches not forming part of an automatic control are contained in IEC 61058-1-1.

This document applies to

- the inherent safety of automatic electrical controls, and
- functional safety of temperature **sensing controls** and safety related systems,
- controls where the performance (for example the effect of EMC phenomena) of the product can impair the overall safety and performance of the controlled system,
- the operating values, operating times, and operating sequences where such are associated with equipment safety and to the testing of automatic electrical temperature **sensing control** devices used in, or in association with, equipment,

EXAMPLE 4 **Boiler thermostats, fan controls, temperature limiters** and **thermal cut-outs**.

- electrical safety of temperature sensing controls with non-electrical outputs such as refrigerant flow and gas **controls**,
- **single-operation devices** as defined in this document.

This is a preview of IEC 60730-2-9 Ed. 5.0 en:2026. [Click here to purchase the full version from the ANSI store.](#)

electrical controls used in, on, or in association with an equipment.

This document does not

- apply to automatic electrical temperature **sensing controls** intended exclusively for industrial process applications unless explicitly mentioned in the relevant part 2 or the equipment standard. However, this document can be applied to evaluate automatic electrical controls intended specifically for industrial applications in cases where no relevant safety standard exists.
- take into account the response value of an automatic action of a control, if such a response value is dependent upon the method of mounting the control in the equipment. Where a response value is of significant purpose for the protection of the user, or surroundings, the value defined in the appropriate equipment standard or as determined by the manufacturer will apply.
- address the integrity of the output signal to the network devices, such as interoperability with other devices unless it has been evaluated as part of the control system.
