CONTENTS

FOREWORD 8
1 Scope 10
2 Normative references 10
3 Terms, definitions and abbreviations 11
3.1 General terms and definitions 11
3.2 Terms and definitions relating to the measurement of the quantity of radiation 14
3.3 Terms and definitions relating to the measurement of the photometric quantity 17
3.4 Terms and definitions relating to the measurement of the thermal quantity 21
3.5 Abbreviations 22
4 Absolute maximum ratings 22
5 Electrical and optical characteristics 23
6 Measuring method 24
6.1 Basic requirements 24
6.1.1 Measuring conditions 24
6.1.2 Measuring instruments and equipment 25
6.1.3 Essential requirements 26
6.1.4 General precautions 27
6.2 Forward voltage (V_F) measurement 27
6.2.1 Purpose 27
6.2.2 Circuit diagram 27
6.2.3 Requirements 27
6.2.4 Measurement procedure 29
6.2.5 Precautions to be observed 29
6.2.6 Specified conditions 29
6.3 Reverse voltage (V_R) measurement 29
6.3.1 Purpose 29
6.3.2 Circuit diagram 29
6.3.3 Measurement procedure 29
6.3.4 Precautions to be observed 30
6.3.5 Specified conditions 30
6.4 Differential resistance (r_f) measurement 30
6.4.1 Purpose 30
6.4.2 Circuit diagram 30
6.4.3 Requirements 30
6.4.4 Measurement procedure 30
6.4.5 Precautions to be observed 31
6.4.6 Specified conditions 31
6.5 Reverse current (I_R) measurement 31
6.5.1 Purpose 31
6.5.2 Circuit diagram 31
6.5.3 Provisions 32
6.5.4 Measurement procedure 32
6.5.5 Precautions to be observed 32

6.5.6 Specified conditions 32
6.6 Measurement of capacitance between terminals (C_t) 32
6.6.1 General 32
6.6.2 Measurement using LCR meter 33
6.6.3 Measurement using AC bridge 33
6.7 Measurement of junction temperature (T_j) and thermal resistance ($R_{th(j-X)el}$, $R_{th(j-X)real}$) 35
6.7.1 Purpose 35
6.7.2 Measurement principle 35
6.7.3 Measurement procedure 37
6.7.4 Precautions to be observed 42
6.7.5 Specified conditions 42
6.8 Response time measurement 42
6.8.1 Purpose 42
6.8.2 Circuit diagram 42
6.8.3 Provisions 43
6.8.4 Measurement procedure 43
6.8.5 Precautions to be observed 43
6.8.6 Specified conditions 44
6.9 Frequency response and cut-off frequency (f_c) measurement 44
6.9.1 Purpose 44
6.9.2 Circuit diagram 44
6.9.3 Provisions 45
6.9.4 Measurement procedure 45
6.9.5 Precautions to be observed 46
6.9.6 Specified conditions 46
6.10 Luminous flux (Φ_V) measurement 46
6.10.1 Purpose 46
6.10.2 Measurement principle 46
6.10.3 Measuring circuit 46
6.10.4 Measurement procedure 47
6.10.5 Precautions to be observed 47
6.10.6 Measurement conditions to be defined 48
6.11 Radiant flux (Φ_e) measurement 48
6.11.1 Purpose 48
6.11.2 Measurement principle 48
6.11.3 Measuring circuit 49
6.11.4 Measurement procedure 49
6.11.5 Precautions to be observed 49
6.11.6 Measurement conditions to be defined 50
6.12 Luminous intensity (I_V) measurement 50
6.12.1 Purpose 50
6.12.2 Measurement principle 50

INTERNATIONAL ELECTROTECHNICAL COMMISSION

____

SEMICONDUCTOR DEVICES –

Part 5-6: Optoelectronic devices – Light emitting diodes

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60747-5-6 has been prepared by subcommittee 47E: Discrete semiconductor devices, of IEC technical committee 47: Semiconductor devices. It is an International Standard.

This second edition cancels and replaces the first edition published in 2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

a) ultraviolet-emitting diodes (UV LED) and their related technical contents were added;
b) power efficiency (η_{PE}) as part of electrical and optical characteristics were added;
c) new measuring methods related to thermal resistance were added;
d) hydrogen sulphide corrosion test was added to quality evaluation;
e) some standards were added to the bibliography.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
47E/745/FDIS	47E/752/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 60747 series, published under the general title *Semiconductor devices*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

SEMICONDUCTOR DEVICES –

Part 5-6: Optoelectronic devices – Light emitting diodes

1 Scope

This part of IEC 60747 specifies the terminology, the essential ratings and characteristics, the measuring methods and the quality evaluations of light emitting diodes (LEDs) for general industrial applications such as signals, controllers, sensors, etc.

LEDs for lighting applications are out of the scope of this part of IEC 60747.

LEDs are classified as follows:

a) LED package;
b) LED flat illuminator;
c) LED numeric display and alpha-numeric display;
d) LED dot-matrix display;
e) infrared-emitting diode (IR LED);
f) ultraviolet-emitting diode (UV LED).

LEDs with a heat spreader or having a terminal geometry that performs the function of a heat spreader are within the scope of this part of IEC 60747.

An integration of LEDs and controlgears, integrated LED modules, semi-integrated LED modules, integrated LED lamps or semi-integrated LED lamps, are out of the scope of this part of IEC 60747.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
