CONTENTS

FOREWORD.....	7
1 Scope.....	9
2 Normative references.....	9
3 Terms and definitions	9
4 Interface format	9
5 Channel status	9
5.1 General.....	9
5.2 Application.....	10
5.2.1 Channel status general format.....	10
5.2.2 Mode 0 channel status format for digital audio equipment for consumer use	13
5.3 Copyright management guidelines for consumer application of the digital audio interface	18
5.3.1 General	18
5.3.2 Category code groups	19
6 User data	22
6.1 General.....	22
6.2 Application.....	22
6.2.1 User data bitstream.....	22
6.2.2 User data message structure.....	22
6.2.3 Equipment classification.....	23
6.2.4 User data message length and contents	24
6.3 Information for synchronization.....	26
6.3.1 General	26
6.3.2 SMPTE time code information	26
6.3.3 Latency information.....	27
6.3.4 Loudness information.....	28
Annex A (normative) Application of the digital audio interface in the compact disc digital audio system	30
A.1 Overview.....	30
A.2 General: application-specific details.....	30
A.3 Channel status: application-specific details	30
A.4 User data: application-specific details	30
Annex B (normative) Application of the digital interface in the 2-channel PCM encoder/decoder.....	32
B.1 Overview.....	32
B.2 General: application-specific details.....	32
B.3 Channel status: application-specific details	32
B.4 User data: application-specific details.....	32
Annex C (normative) Application of the digital interface in the 2-channel digital audio tape recorder in the consumer mode	33
C.1 Overview.....	33
C.2 General: application-specific details.....	33
C.3 Channel status: application-specific details	33
C.4 User data: application-specific details.....	34
Annex D (normative) Application of the digital interface in laser optical digital audio systems for which no other category code is defined	37

D.1	Overview.....	37
D.2	General: application-specific details.....	37
D.3	Channel status: application-specific details	37
D.4	User data: application-specific details.....	37
Annex E (normative) Application of the digital interface in a digital audio mixer in the consumer mode		38
E.1	Overview.....	38
E.2	General: application-specific details.....	38
E.3	Channel status: application-specific details	38
E.4	User data: application specific details	38
Annex F (normative) Application of the digital interface with a sampling rate converter in the consumer mode.....		39
F.1	Overview.....	39
F.2	General: application-specific details.....	39
F.3	Channel status: application-specific details	39
F.4	User data: application-specific details	39
Annex G (normative) Application of the digital interface with a digital sound sampler in the consumer mode.....		40
G.1	Overview.....	40
G.2	General: application-specific details.....	40
G.3	Channel status: application-specific details	40
G.4	User data: application specific details	40
Annex H (normative) Application of the digital interface in a digital broadcast receiver (Japan) in the consumer mode		41
H.1	Overview.....	41
H.2	General: application-specific details.....	41
H.3	Channel status: application-specific details	41
H.4	User data: application-specific details.....	41
Annex I (normative) Application of the digital interface in a digital broadcast receiver (Europe) in the consumer mode		42
I.1	Overview.....	42
I.2	General: application-specific details.....	42
I.3	Channel status: application-specific details	42
I.4	User data: application-specific details	42
Annex J (normative) Application of the digital interface in a digital broadcast receiver (USA) in the consumer mode		43
J.1	Overview.....	43
J.2	General: application-specific details.....	43
J.3	Channel status: application-specific details	43
J.4	User data: application-specific details	43
Annex K (normative) Application of the digital interface for electronic software delivery in the consumer mode.....		44
K.1	Overview.....	44
K.2	General: application-specific details.....	44
K.3	Channel status: application-specific details	44
K.4	User data: application-specific details	44
Annex L (normative) Application of the digital interface in the digital compact cassette system in the consumer mode		45
L.1	Overview.....	45
L.2	General: application-specific details.....	45

L.3	Channel status: application-specific details	45
L.4	User data: application-specific details	45
L.4.1	General	45
L.4.2	Marker mode.....	45
L.4.3	Extended mode	46
Annex M (normative)	Application of the digital interface in the mini-disc system in the consumer mode	50
M.1	Overview.....	50
M.2	General: application-specific details.....	50
M.3	Channel status: application-specific details	50
M.4	User data: application-specific details	50
Annex N (normative)	Application of the digital interface in a digital sound processor in the consumer mode	51
N.1	Overview.....	51
N.2	General: application-specific details.....	51
N.3	Channel status: application-specific details	51
N.4	User data: application-specific details	51
Annex O (normative)	Application of the digital interface in the digital versatile disc system (DVD) in the consumer mode.....	52
O.1	Overview.....	52
O.2	General: application-specific details.....	52
O.3	Channel status: application-specific details	52
O.4	User data: application-specific details	52
Annex P (informative)	Use of original sampling frequency, sampling frequency and clock accuracy	53
Annex Q (normative)	Application of the digital interface in magnetic disc digital audio systems in the consumer mode	55
Q.1	Overview.....	55
Q.2	General: application-specific details.....	55
Q.3	Channel status: application-specific details	55
Q.4	User data: application-specific details	55
Annex R (normative)	Explanations of category code implementation	56
R.1	Multi-media player.....	56
R.2	Home-recorded medium player	56
R.3	Monitoring output from a recorder.....	57
R.3.1	Real-time monitoring (direct monitoring)	57
R.3.2	Monitoring after recording	57
R.4	Integrated products	58
R.5	Implementation rule of category code groups for digital/digital converter and signal-processing products	58
R.5.1	Discrete product worked as a digital/digital converter or a signal processing unit	58
R.5.2	Integrated product including a digital/digital converter or a signal processing unit	58
R.6	Magnetic disc recorder unit inside an integrated product	59
R.7	Category code assignment	59
R.7.1	No category code in a corresponding category code group.....	59
R.7.2	No category code group for a corresponding product	59
R.8	Other assignment of integrated products.....	60

Annex S (informative) Application of the digital audio interface for synchronization of audio, video and multi-media equipment.....	61
S.1 General.....	61
S.2 Lip-sync system model	61
S.3 How to compensate lip-sync	61
S.3.1 General	61
S.3.2 Detection methods	62
S.4 Use of time code	63
S.5 Use of latency information	64
S.6 Example of latency parameter transmission method with TL_V	64
S.6.1 An example for solving lip-sync problems	64
S.6.2 Another example for solving lip-sync problems.....	65
Annex T (normative) MPEG Surround over PCM.....	66
T.1 Format of MPEG Surround buried data frames.....	66
T.2 MPEG Surround detection	66
Bibliography	67

INTERNATIONAL ELECTROTECHNICAL COMMISSION

DIGITAL AUDIO INTERFACE –

Part 3: Consumer applications

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60958-3 has been prepared by technical area 20: Analogue and digital audio, of IEC technical committee 100: Audio, video and multimedia systems and equipment. It is an International Standard.

This fourth edition cancels and replaces the third edition published in 2006, Amendment 1:2009 and Amendment 2:2015. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) The relevant part of IEC 60958-5 is supported.

This is a preview of "IEC 60958-3 Ed. 4.0 ...". Click here to purchase the full version from the ANSI store.

The text of this International Standard is based on the following documents:

Draft	Report on voting
100/3543/CDV	100/3594/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

A list of all parts in the IEC 60958 series, published under the general title *Digital audio interface*, can be found on the IEC website.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

DIGITAL AUDIO INTERFACE –

Part 3: Consumer applications

1 Scope

This part of IEC 60958 specifies the consumer application of the interface for the inter-connection of digital audio equipment defined in IEC 60958-1.

NOTE When used in a consumer digital processing environment, the interface is primarily intended to carry stereophonic programmes, with a resolution of up to 20 bits per sample, an extension to 24 bits per sample being possible.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60958-1, *Digital audio interface – Part 1: General*

IEC 60958-5, *Digital audio interface – Part 5: Consumer application enhancement*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60958-1 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

4 Interface format

The interface format as defined in IEC 60958-1 shall be used.

Unless otherwise specified in Annex A to Annex T, the following specification is applicable.

- Audio sample word has a length of 20 bits/sample. The auxiliary sample bits are an optional expansion of the audio sample, if not used = "0".
- User data is not used, all bits = "0".
- Channel status is identical for both subframes of the interface, with the exception of the channel number, if that is not equal to zero.

5 Channel status

5.1 General

For every subframe, the channel status bit provides information related to the audio channel that is carried in that same subframe.
