## CONTENTS

FOREWORD.....	9
INTRODUCTION.....	11
1 Scope.....	12
2 Normative references .....	12
3 Terms, definitions, abbreviated terms, notations and symbols .....	13
3.1 General terms and definitions .....	13
3.2 Terms and definitions related to uncertainty.....	13
3.3 Notations .....	14
3.3.1 Functions.....	14
3.3.2 Symbols and abbreviated terms.....	14
3.3.3 Indices.....	14
4 Requirements .....	14
4.1 Requirements for products complying with class A.....	14
4.2 Requirements for products complying with class S.....	15
5 Functional type tests common requirements .....	17
5.1 General philosophy for testing .....	17
5.1.1 System topology.....	17
5.1.2 Stabilization time .....	17
5.1.3 Measuring ranges .....	17
5.1.4 Single "power-system influence quantities".....	19
5.1.5 "External influence quantities" .....	21
5.1.6 Test criteria .....	21
5.2 Testing procedure.....	22
5.2.1 Device under test.....	22
5.2.2 Testing conditions .....	22
5.2.3 Testing equipment.....	22
6 Functional testing procedure for instruments complying with class A according to IEC 61000-4-30 .....	22
6.1 Power frequency.....	22
6.1.1 General .....	22
6.1.2 Measurement method .....	23
6.1.3 Measurement uncertainty and measuring range.....	23
6.1.4 Measurement evaluation.....	24
6.1.5 Measurement aggregation .....	24
6.2 Magnitude of supply voltage.....	24
6.2.1 Measurement method .....	24
6.2.2 Measurement uncertainty and measuring range.....	24
6.2.3 Measurement evaluation.....	25
6.2.4 Measurement aggregation .....	25
6.3 Flicker.....	27
6.4 Supply voltage interruptions, dips and swells .....	27
6.4.1 General .....	27
6.4.2 Check dips / interruptions in polyphase system.....	35
6.4.3 Check swells in polyphase system .....	37
6.5 Supply voltage unbalance .....	38
6.5.1 General .....	38

6.5.2	Measurement method, measurement uncertainty and measuring range .....	39
6.5.3	Aggregation .....	39
6.6	Voltage harmonics .....	39
6.6.1	Measurement method .....	39
6.6.2	Measurement uncertainty and measuring range .....	40
6.6.3	Measurement evaluation .....	41
6.6.4	Measurement aggregation .....	41
6.7	Voltage interharmonics .....	43
6.7.1	Measurement method .....	43
6.7.2	Measurement uncertainty and measuring range .....	44
6.7.3	Measurement evaluation .....	45
6.7.4	Measurement aggregation .....	45
6.8	Mains signalling voltages on the supply voltage .....	47
6.8.1	Measurement method .....	47
6.8.2	Measurement uncertainty and measuring range .....	49
6.8.3	Aggregation .....	50
6.9	Measurement of underdeviation and overdeviation parameters .....	50
6.9.1	Measurement method .....	50
6.9.2	Measurement uncertainty and measuring range .....	52
6.9.3	Measurement evaluation .....	53
6.9.4	Measurement aggregation .....	53
6.10	Flagging .....	56
6.11	Clock uncertainty testing .....	58
6.12	Variations due to external influence quantities .....	58
6.12.1	General .....	58
6.12.2	Influence of temperature .....	59
6.12.3	Influence of power supply voltage .....	61
6.13	Rapid voltage changes (RVC) .....	62
6.13.1	RVC parameters and evaluation .....	62
6.13.2	General .....	62
6.13.3	"No RVC" tests .....	64
6.13.4	"RVC threshold and setup" test .....	68
6.13.5	"RVC parameters" test .....	70
6.13.6	"RVC polyphase" tests .....	72
6.13.7	"Voltage is in steady-state condition" tests .....	74
6.14	Magnitude of current .....	77
6.15	Harmonic current .....	77
6.16	Interharmonic currents .....	77
6.17	Current unbalance .....	77
6.17.1	General .....	77
6.17.2	Measurement method, measurement uncertainty and measuring range .....	78
7	Functional testing procedure for instruments complying with class S according to IEC 61000-4-30 .....	78
7.1	Power frequency .....	78
7.1.1	General .....	78
7.1.2	Measurement method .....	79
7.1.3	Measurement uncertainty and measuring range .....	79
7.1.4	Measurement evaluation .....	80
7.1.5	Measurement aggregation .....	80

7.2	Magnitude of the supply voltage.....	80
7.2.1	Measurement method .....	80
7.2.2	Measurement uncertainty and measuring range .....	80
7.2.3	Measurement evaluation.....	81
7.2.4	Measurement aggregation .....	81
7.3	Flicker.....	83
7.4	Supply voltage interruptions, dips and swells .....	83
7.4.1	General requirements .....	83
7.4.2	Check dips / interruptions in polyphase system.....	89
7.4.3	Check swells in polyphase system .....	91
7.5	Supply voltage unbalance .....	92
7.5.1	General .....	92
7.5.2	Measurement method, measurement uncertainty and measuring range .....	93
7.5.3	Aggregation.....	93
7.6	Voltage harmonics .....	93
7.6.1	General .....	93
7.6.2	Measurement method .....	94
7.6.3	Measurement method, measurement uncertainty and measuring range .....	95
7.6.4	Measurement evaluation.....	96
7.6.5	Measurement aggregation .....	96
7.7	Voltage interharmonics .....	98
7.8	Mains signalling voltages on the supply voltage .....	98
7.8.1	General .....	98
7.8.2	Measurement method .....	99
7.8.3	Measurement uncertainty and measuring range.....	99
7.8.4	Aggregation.....	99
7.9	Measurement of underdeviation and overdeviation parameters .....	99
7.10	Flagging.....	99
7.11	Clock uncertainty testing.....	101
7.12	Variations due to external influence quantities .....	102
7.12.1	General .....	102
7.12.2	Influence of temperature.....	103
7.12.3	Influence of power supply voltage.....	105
7.13	Rapid voltage changes.....	106
7.14	Magnitude of current.....	106
7.15	Harmonic current .....	106
7.16	Interharmonic currents .....	106
7.17	Current unbalance .....	106
7.17.1	General .....	106
7.17.2	Measurement method, measurement uncertainty and measuring range .....	107
8	Calculation of measurement uncertainty and operating uncertainty.....	108
Annex A (normative)	Intrinsic uncertainty and operating uncertainty, .....	110
A.1	General.....	110
A.2	Measurement uncertainty.....	110
A.3	Operating uncertainty.....	111
Annex B (informative)	Overall system uncertainty .....	112
Annex C (normative)	Calculation of measurement and operating uncertainty for voltage magnitude and power frequency .....	113

C.1	Selection of test points to verify operating uncertainty and uncertainty under reference conditions .....	113
C.2	Class A calculation examples.....	113
C.2.1	General .....	113
C.2.2	Parameter: magnitude of supply voltage, $U_{din} = 230$ V, 50/60Hz, rated range of temperature $-25$ °C to $+55$ °C.....	113
C.2.3	Parameter: power frequency 50/60 Hz, rated range of temperature $-25$ °C to $+55$ °C .....	114
Annex D (informative)	Further test on dips (amplitude and phase angles changes) .....	116
D.1	Phase-to-phase or phase-to-neutral testing.....	116
D.2	Test method.....	116
Annex E (informative)	Further tests on dips (polyphase): test procedure .....	118
E.1	General.....	118
E.2	Phase voltage dips and interruptions .....	119
E.3	Phase swells.....	119
Annex F (normative)	Gapless measurements of voltage amplitude and harmonics test .....	121
F.1	Purpose of the test.....	121
F.2	Test set up.....	121
F.3	Voltage amplitude .....	121
F.3.1	Test signal.....	121
F.3.2	Result evaluation .....	121
F.4	Harmonics .....	122
F.4.1	Test signal.....	122
F.4.2	Result evaluation .....	122
F.5	Inter-harmonics.....	123
F.5.1	Test signal.....	123
F.5.2	Result evaluation .....	123
Annex G (informative)	Gapless measurements of voltage amplitude and harmonics.....	124
Annex H (informative)	Testing equipment recommendations .....	133
H.1	Testing range.....	133
H.2	Uncertainty and stability of source and reference meter .....	133
H.2.1	Uncertainty of source and reference meter .....	133
H.2.2	Stability of the source .....	134
H.3	Time synchronisation .....	134
H.4	Power quality functions of source and reference meter .....	134
H.5	Traceability .....	135
Annex I (informative)	Recommendations related to a declaration of conformity (DoC) and a test report .....	136
I.1	Definitions.....	136
I.2	Recommendations .....	136
I.3	Example of IEC 62586-1 declaration of conformity .....	136
I.4	Example of IEC 62586-2 declaration .....	138
I.4.1	General .....	138
I.4.2	Recommendation for IEC 62586-2 test report .....	139
I.4.3	Recommendation for IEC 62586-2 test summary .....	140
I.4.4	Recommendation for IEC 62586-2 test equipment information .....	140
I.4.5	Recommendation for IEC 62586-2 tested functions.....	140

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**POWER QUALITY MEASUREMENT IN POWER SUPPLY SYSTEMS –****Part 2: Functional tests and uncertainty requirements**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62586-2 has been prepared by IEC technical committee 85: Measuring equipment for electrical and electromagnetic quantities.

This second edition cancels and replaces the first edition published in 2013. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) test procedures for RVC and current have been added;
- b) mistakes have been fixed.

The text of this standard is based on the following documents:

CDV	Report on voting
85/525/CDV	85/571/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 62586 series, published under the general title *Power quality measurement in power supply systems*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

The contents of the corrigendum of June 2018 have been included in this copy.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Power quality is more and more important worldwide in power supply systems and is generally assessed by power quality instruments.

This part of IEC 62586 specifies functional and uncertainty tests intended to verify the compliance of a product to class A and class S measurement methods defined in IEC 61000-4-30.

This document therefore complements IEC 61000-4-30.

# POWER QUALITY MEASUREMENT IN POWER SUPPLY SYSTEMS –

## Part 2: Functional tests and uncertainty requirements

### 1 Scope

This part of IEC 62586 specifies functional tests and uncertainty requirements for instruments whose functions include measuring, recording, and possibly monitoring power quality parameters in power supply systems, and whose measuring methods (class A or class S) are defined in IEC 61000-4-30.

This document applies to power quality instruments complying with IEC 62586-1.

This document can also be referred to by other product standards (e.g. digital fault recorders, revenue meters, MV or HV protection relays) specifying devices embedding class A or class S power quality functions according to IEC 61000-4-30.

These requirements are applicable in single-, dual- (split phase) and 3-phase AC power supply systems at 50 Hz or 60 Hz.

It is not the intent of this document to address user interface or topics unrelated to device measurement performance.

The document does not cover post-processing and interpretation of the data, for example with dedicated software.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
