CONTENTS

FOREWORD.....	5
1 Scope and object.....	7
2 Terms and definitions	7
2.1 Photovoltaics (PV).....	7
2.2 Concentrating photovoltaics (CPV).....	7
2.3 Concentrator module (CPV module)	7
2.4 Concentrator assembly.....	8
3 Specifications for solar trackers for PV applications.....	8
3.1 Specification template	8
4 Tracker definitions and taxonomy	10
4.1 General	10
4.2 Payload types.....	10
4.2.1 Standard photovoltaic (PV) module trackers	10
4.2.2 Concentrated photovoltaic (CPV) module trackers	11
4.3 Rotational axes	11
4.3.1 Single axis trackers	11
4.3.2 Dual axis trackers	12
4.4 Actuation and control.....	14
4.4.1 Architecture	14
4.4.2 Drive types	14
4.5 Types of tracker control.....	15
4.5.1 Passive control	15
4.5.2 Active control.....	15
4.5.3 Backtracking.....	15
4.6 Structural characteristics	16
4.6.1 Vertical supports.....	16
4.6.2 Foundation types	16
4.6.3 Tracker positions	17
4.6.4 Stow time	17
4.7 Energy consumption.....	17
4.7.1 Daily energy consumption.....	17
4.7.2 Stow energy consumption.....	18
4.8 External elements and interfaces.....	18
4.8.1 Foundation	18
4.8.2 Foundation interface.....	18
4.8.3 Payload	18
4.8.4 Payload interface.....	18
4.8.5 Payload mechanical interface	18
4.8.6 Payload electrical interface.....	18
4.8.7 Grounding interface	18
4.8.8 Installation effort.....	18
4.8.9 Control interface	19
4.9 Internal tolerances.....	19
4.9.1 Primary axis tolerance	19
4.9.2 Secondary axis tolerance	20
4.10 Tracker system elements.....	20

4.10.1	Mechanical structure	20
4.10.2	Tracker controller	20
4.10.3	Sensors	20
4.11	Reliability terminology	20
4.11.1	Mean time between failures (MTBF)	20
4.11.2	Mean time between critical failures (MTBCF)	21
4.11.3	Mean time to repair (MTTR)	21
4.12	Environmental conditions	21
4.12.1	Operating temperature range	21
4.12.2	Survival temperature range	21
4.12.3	Maximum wind during operation	21
4.12.4	Maximum wind during stow	21
4.12.5	Snow load	21
4.13	Functional tests	22
4.13.1	Static load test	22
4.13.2	Moment testing	22
4.13.3	Limit switch operation	22
4.13.4	Manual operation	22
5	Tracker accuracy characterization	22
5.1	Overview	22
5.2	Pointing error (instantaneous)	22
5.3	Measurement	23
5.3.1	Overview	23
5.3.2	Example of experimental method to measure pointing error	23
5.3.3	Calibration of pointing error measurement tool	24
5.4	Calculation of tracker accuracy	24
5.4.1	Overview	24
5.4.2	Data collection	25
5.4.3	Data binning by wind speed	25
5.4.4	Data filtering	26
5.4.5	Data quantity	26
5.4.6	Accuracy calculations	26
6	Mechanical characterization	27
6.1	General	27
6.2	Backlash	27
6.3	Stiffness	27
7	Reliability testing	28
7.1	Corrosion	28
7.2	Component durability	28
7.3	Extreme conditions tests	28
8	Additional optional accuracy calculations	28
8.1	Typical tracking accuracy range	28
8.2	Tracking error histogram	29
8.3	Percent of available irradiance as a function of pointing error	29

Figure 1 – θ = Altitude angle = 0° (zenith angle = 90°) occurs when a vector normal to the module face is pointing to the horizon. Altitude angle = 90° (zenith angle = 0°) occurs when the module is facing the sky

INTERNATIONAL ELECTROTECHNICAL COMMISSION

PHOTOVOLTAIC SYSTEMS – SPECIFICATIONS FOR SOLAR TRACKERS

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a technical specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC 62727, which is a technical specification, has been prepared by IEC technical committee 82: Solar photovoltaic energy systems.

This is a preview of "IEC/TS 62727 Ed. 1.0...". [Click here to purchase the full version from the ANSI store.](#)

The text of this technical specification is based on the following documents:

Enquiry draft	Report on voting
82/651/DTS	82/711/RVC

Full information on the voting for the approval of this technical specification can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- transformed into an International standard,
- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

PHOTOVOLTAIC SYSTEMS – SPECIFICATIONS FOR SOLAR TRACKERS

1 Scope and object

This technical specification provides guidelines for the parameters to be specified for solar trackers for photovoltaic systems and provides recommendations for measurement techniques. No attempt is made to determine pass/fail criteria for trackers.

The purpose of this test specification is to define the performance characteristics of trackers and describe the methods to calculate and/or measure critical parameters.

This specification provides industry-wide definitions and parameters for solar trackers. Each vendor can design, build, and specify the functionality and accuracy with uniform definition. This allows consistency in specifying the requirements for purchasing, comparing the products from different vendors, and verifying the quality of the products. In addition, this specification will clarify terminology and definitions for trackers and provide examples of measurement techniques.

This technical specification will be a foundation for other standards to follow, including (but not limited to) design qualification and reliability.
