This Recommended Practice is published by the INSTITUTE OF ENVIRONMENTAL SCIENCES AND TECHNOLOGY to advance contamination control and the technical and engineering sciences. Its use is entirely voluntary, and determination of its applicability and suitability for any particular use is solely the responsibility of the user.

This Recommended Practice was prepared by and is under the jurisdiction of Working Group 022 of the IEST Contamination Control Division.

PROPOSAL FOR IMPROVEMENT: The Working Groups of the INSTITUTE OF ENVIRONMENTAL SCIENCES AND TECHNOLOGY are continually working on improvements to their Recommended Practices and Reference Documents. Suggestions from those who use these documents are welcome. If you have a suggestion regarding this document, please use the online Proposal for Improvement form found on the IEST website at www.iest.org/proposal/form.html.

Recommended Practice 022.2

Electrostatic Charge in Cleanrooms and Other Controlled Environments

IEST-RP-CC022.2

1 SCOPE AND LIMITATIONS

1.1 Scope

This Recommended Practice (RP) discusses methods for specifying and evaluating the effectiveness of techniques for controlling electrostatic charge. Proper control of electrostatic charge may reduce particulate contamination on surfaces and the likelihood of electrostatic discharge. This document, which describes typical control systems and their applications, also lists methods of testing and measurement of charge generation, charge neutralization, resistivity of surfaces and materials, and static field attenuation.

1.2 Limitations

This RP excludes specific evaluation and qualification related to the protection of ordnance, flammable materials, and explosives. This RP does not prescribe design or control limits; quality acceptance standards; process issues; or health, safety, and environmental issues and practices outside of contamination control issues. Users should establish their own quality standards.
