**INCITS 547-2020**

American National Standard  
for Information Technology –

Fibre Channel –  
Switch Fabric - 7 (FC-SW-7)

Secretariat

**Information Technology Industry Council**

Approved February 24, 2020

**American National Standards Institute, Inc.**

**Abstract**

This standard describes the requirements for an interconnecting Fabric consisting of multiple Fibre Channel Fabric Switch elements.

## American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

**CAUTION NOTICE:** This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

**CAUTION:** The developers of this standard have requested that holders of patents that may be required for the implementation of the standard disclose such patents to the publisher. However, neither the developers nor the publisher have undertaken a patent search in order to identify which, if any, patents may apply to this standard. As of the date of publication of this standard, following calls for the identification of patents that may be required for the implementation of the standard, notice of one or more such claims has been received. By publication of this standard, no position is taken with respect to the validity of this claim or of any rights in connection therewith. The known patent holder(s) has (have), however, filed a statement of willingness to grant a license under these rights on reasonable and nondiscriminatory terms and conditions to applicants desiring to obtain such a license. Details may be obtained from the publisher. No further patent search is conducted by the developer or publisher in respect to any standard it processes. No representation is made or implied that this is the only license that may be required to avoid infringement in the use of this standard.

10.6 Fabric Management Session protocol .....	277
10.6.1 Fabric Management Session protocol overview .....	277
10.6.2 Reserving Fabric Change Authorization .....	278
10.6.3 Staging the Fabric Configuration .....	278
10.6.4 Updating the Fabric Configuration .....	279

10.6.5 Releasing Fabric Change Authorization . . . . .	279
10.6.6 Mapping of a Server session to a Fabric Management Session . . . . .	279
10.6.7 Fabric behavior to handle the CT SFEZ request . . . . .	281
10.6.8 Fabric behavior to handle the CT AAPZ and RAPZ requests . . . . .	281
10.7 Switch behaviors during merge . . . . .	281
<b>11 Distributed broadcast . . . . .</b>	<b>282</b>
11.1 Overview . . . . .	282
11.2 Spanning tree . . . . .	282
11.2.1 Spanning tree example . . . . .	282
<b>12 Virtual Fabrics Switch support . . . . .</b>	<b>284</b>
12.1 Overview . . . . .	284
12.2 VF Capable Switch functional model . . . . .	285
12.3 Switch_Names usage . . . . .	286
12.4 Configuration information . . . . .	286
12.5 Enabling VFT tagging on Switch ports . . . . .	286
12.6 Exchange Virtual Fabrics parameters processing . . . . .	291
12.6.1 Overview . . . . .	291
12.6.2 Changing the VFT tagging mode . . . . .	293
12.6.3 Adding or removing Virtual Fabrics . . . . .	294
12.6.4 Changing the port VF_ID . . . . .	294
<b>13 Enhanced Commit Service . . . . .</b>	<b>295</b>
13.1 Overview . . . . .	295
13.2 Assisted mode protocol operations . . . . .	295
13.3 Autonomous mode protocol operations . . . . .	296
13.3.1 Protocol phases . . . . .	296
13.3.1.1 Overview . . . . .	296
13.3.1.2 Phase one . . . . .	296
13.3.1.3 Phase two . . . . .	296
13.3.1.4 Phase three . . . . .	296
13.3.1.5 Phase four . . . . .	296
13.3.2 Handling Fabric changes . . . . .	297
13.3.3 Error recovery . . . . .	297
13.3.3.1 Overview . . . . .	297
13.3.3.2 Managing Switch not functional . . . . .	297
13.3.3.2.1 Dead Man timer . . . . .	297
13.3.3.2.2 Basic procedure . . . . .	297
13.3.3.3 Resolution of multiple Managing Switches . . . . .	298
13.3.3.3.1 Two Managing Switches - same commit phase . . . . .	298
13.3.3.3.2 Two Managing Switches - different commit phases . . . . .	298
13.3.4 Ladder diagrams . . . . .	299
13.3.4.1 Normal case . . . . .	299
13.3.4.2 Unsuccessful case . . . . .	300
13.3.4.3 Transfer ownership case - recovery processing enabled . . . . .	301
13.3.5 State machines . . . . .	301
13.3.5.1 Overview . . . . .	301
13.3.5.2 States and transitions for the Managing Switch . . . . .	301
13.3.5.3 States and transitions for the managed Switch . . . . .	304
13.3.5.4 States and transitions for transfer commit ownership . . . . .	306
<b>14 Virtual Channels for Switched Fabric . . . . .</b>	<b>308</b>
14.1 Overview . . . . .	308
14.2 Assignment of Virtual Channels . . . . .	308

14.2.1 Overview of assignment .....	308
14.2.2 Simple .....	308
14.2.3 Fixed .....	308
14.2.4 Variable .....	309
14.3 VC parameter negotiation .....	310
14.3.1 Agreement of assignment schemes .....	310
14.3.2 Negotiation of number of VCs .....	310
14.4 Credit management .....	311
14.4.1 Overview .....	311
14.4.2 VC_RDY Primitive Signals .....	311
<b>15 Inter-Fabric Routing support .....</b>	<b>312</b>
15.1 F_RJT and F_BSY processing for Class 2/F .....	312
15.1.1 Overview .....	312
15.1.2 Encapsulated Class 2 F_RJT or Class 2 F_BSY frame format .....	312
15.1.2.1 Overview .....	312
15.1.2.2 Encapsulated Enc_Header field values .....	313
15.1.2.3 Encapsulated IFR_Header field values .....	314
15.1.2.4 Encapsulated Frame_Header field values .....	314
<b>16 Timers and constants .....</b>	<b>315</b>
16.1 General timers and constants .....	315
16.2 SW_ILS timeout values .....	316
<b>17 Distributed Switch .....</b>	<b>317</b>
17.1 Overview .....	317
17.2 FCDF handling of well-known addresses .....	323
17.3 A_Port to A_Port links (ASLs) .....	326
17.4 Distributed Switch operations .....	327
17.4.1 Overview .....	327
17.4.2 FCDF routing .....	328
17.4.3 N_Port_ID handling .....	329
17.4.4 Distribution tree .....	331
17.5 Controlling Switch redundancy protocol .....	331
17.5.1 Controlling Switch redundancy protocol overview .....	331
17.5.2 Controlling Switch redundancy protocol state machine .....	331
<b>18 Leaf Switch .....</b>	<b>339</b>
18.1 Overview .....	339
<b>Annex A .....</b>	<b>340</b>
A.1 Introduction .....	340
A.2 Example 1: two E/F/FL_Port-capable Switch ports .....	340
A.3 Example 2: two E/F/FL_Port-capable Switch ports and one PN_Port .....	341
A.4 Example 3: one E/F/FL_Port-capable Port and one E/F_Port-capable Port .....	342
<b>Annex B .....</b>	<b>343</b>
B.1 Introduction .....	343
B.2 ELP exchange protocol .....	343
B.2.1 ELP exchange without parameter negotiation .....	343
B.2.2 ELP exchange with parameter negotiation .....	345
<b>Annex C .....</b>	<b>347</b>
C.1 Introduction .....	347

C.2 Sample flows .....	347
C.2.1 HBA registration - single Switch .....	347
C.2.2 HBA registration - multiple Switches - caches updated .....	348
C.2.3 HBA registration - multiple Switches - caches not updated .....	348
C.2.4 HBA de-registration - primary HBA manager .....	349
C.2.5 HBA de-registration - non-primary HBA manager .....	350
<b>Annex D .....</b>	<b>352</b>
D.1 Overview .....	352
D.2 Background .....	352
D.3 Definitions .....	352
D.4 Characteristics of Avionics Fabrics .....	353
D.4.1 Overview .....	353
D.4.2 AE Switch port mode initialization .....	354
D.4.2.1 Overview .....	354
D.4.2.2 Switch port mode initialization state machine modifications .....	354
D.4.3 ELP payload requirements .....	358
D.4.4 AE Principal Switch .....	359
D.4.4.1 AE Principal Switch initialization process .....	359
D.4.4.2 Map update process .....	360
D.4.4.3 AE Principal Switch update process .....	360
D.4.5 FFI Domain Topology Map distribution .....	361
D.4.5.1 Overview .....	361
D.4.5.2 FFI Domain Topology Map distribution state machine diagram .....	361
D.4.5.3 FFI Domain Topology Map distribution state machine text .....	362
D.4.6 Fast Fabric Initialization (FFI) SW_ILS definition .....	369
D.4.6.1 Overview .....	369
D.4.6.2 Fast Fabric Initialization Link State Record (FFI LSR) format .....	374
D.4.6.3 Fast Fabric Initialization Link Descriptor format .....	375
D.5 FFI Domain Topology Map Distribution (Informative) .....	376
D.5.1 Sample configuration .....	376
D.5.2 Initialization procedure example .....	377
D.5.3 AE Principal Switch update example .....	379

## Foreword

(This foreword is not part of American National Standard INCITS 547-2020.)

This standard describes the requirements for an interconnecting Fabric consisting of multiple Fibre Channel Fabric Switch elements.

This standard was developed by Technical Committee T11 of Accredited Standards Committee INCITS during 2015-2019. The standards approval process started in 2019. This document includes annexes that are informative and are not considered part of the standard.

Requests for interpretation, suggestions for improvements or addenda, or defect reports are welcome. They should be sent to the INCITS Secretariat, Information Technology Industry Council, 700 K Street NW, Suite 600, Washington, DC 20001.

This standard was processed and approved for submittal to ANSI by the International Committee for Information Technology Standards (INCITS). Committee approval of the standard does not necessarily imply that all committee members voted for its approval. At the time it approved this standard, INCITS had the following members:

Laura Lindsay, Chair  
Donald Deutsch, Vice-Chair  
Jennifer Garner, Secretary

<i>Organization Represented</i>	<i>Name of Representative</i>
Adobe Systems, Inc.....	Scott Foshee

## Introduction

FC-SW-7 is one of the Fibre Channel family of standards. This family includes INCITS FC-FS-6 and INCITS FC-PI-7/FC-PI-7P. INCITS FC-GS-8, is a document related to Generic Fabric Services and is closely tied to FC-SW-7. INCITS FC-BB-6 describes how Fabrics are extended over transports complementary to Fibre Channel. INCITS FC-MI-3 and INCITS FC-DA-2 describe interoperability profiles that assists in the interoperability of Switches. INCITS 332-1999, FC-AL-2, specifies the arbitrated loop topology. INCITS FC-SP-2 describes the Security requirements and protocols associated with Fibre Channel networks. INCITS FC-IFR describes the requirements and protocols associated with Inter-Fabric Routing.

FC-SW-7 describes how Switches communicate and interact with one another to form a Fabric of Switches. Included are Fabric initialization and configuration, routing, Server communication, event distribution and repository exchanges (e.g., Zoning information).

American National Standard  
for Information Technology --

Fibre Channel --  
Switch Fabric - 7 (FC-SW-7)

**1 Scope**

This American National Standard for FC-SW-7 describes the operation and interaction of Fibre Channel Switches.

This standard includes:

- a) E\_Port operation and Fabric Configuration;
- b) Path selection (FSPF);
- c) Bridge port (B\_Port) operation;
- d) Distributed Server interaction and communication;
- e) Exchange of information between Switches to support Zoning;
- f) Distribution of Event Notifications between Switches;
- g) Virtual Fabrics Switch Support;
- h) Enhanced Commit Service;
- i) Virtual Channels;
- j) Inter-Fabric Routing;
- k) Distributed Switch; and
- l) Leaf Switch.

**2.1 Overview**

The following standards contain provisions that, through reference in the text, constitute provisions of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent editions of the standards listed below.

For electronic copies of ANSI, INCITS, and International standards, visit ANSI's Electronic Standards Store (ESS) at <http://www.ansi.org>.
