Contents

	Page
Foreword	iv
1 Scope	1
2 Conformance	1
3 Normative references	1
4 Terms and definitions	2
5 Physical characteristics of the identification card	4
5.1 Magnetic stripe area warpage	4
5.2 Surface distortions	4
6 Physical characteristics of the magnetic stripe	5
6.1 Height and surface profile of the magnetic stripe area	5
6.2 Surface roughness	7
6.3 Adhesion of stripe to card	7
6.4 Wear of magnetic stripe from read/write head	7
6.5 Resistance to chemicals	8
7 Performance characteristics for the magnetic material	8
7.1 General	8
7.2 Testing and operating environment	8
7.3 Signal amplitude requirements for magnetic media	8
8 Encoding technique	10
9 Encoding specification	11
9.1 Angle of recording	11
9.2 Nominal bit density	12
9.3 Flux transition spacing variation	12
9.4 Signal amplitude requirements	12
9.5 Bit configuration	12
9.6 Direction of recording	13
9.7 Leading and trailing clock bits	13
10 Data structure	13
10.1 Track format	13
10.2 Coding for error detection and correction	15
11 Decoding	18
12 Location of encoded tracks	19
Annex A (informative) Compatibility of magnetic stripes (ISO/IEC 7811-6 and ISO/IEC 7811-7) ..	20
Annex B (informative) Magnetic stripe abrasivity	21
Annex C (informative) Static magnetic characteristics	22
Annex D (informative) Reed-Solomon code references	25

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information

The committee responsible for this document is Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 17, *Cards and personal identification*.

This second edition cancels and replaces the first edition (ISO/IEC 7811-7:2004) of which it constitutes a major revision with the following changes.

- The primary standard cards held by Q-Card are used to calibrate the manufacture of secondary reference cards. Other primary standard cards held by PTB and Card testing International (CTI) are used as backup to replace cards held by Q-Card as they wear out.
- Delete reference to character sets in the Scope since none are used in this International Standard.
 - List of major differences has been moved from the Introduction to [Annex A](#).
 - The supplier of secondary reference cards has changed from PTB to Q-Card.

ISO/IEC 7811 consists of the following parts, under the general title *Identification cards — Recording technique*:

- *Part 1: Embossing*
- *Part 2: Magnetic stripe — Low coercivity*
- *Part 6: Magnetic stripe — High coercivity*
- *Part 7: Magnetic stripe — High coercivity, high density*
- *Part 8: Magnetic stripe — High coercivity of 51,7 kA/m (650 Oe)*
- *Part 9: Tactile identifier mark*

Notes in this International Standard are only used for giving additional information intended to assist in the understanding or use of the International Standard and do not contain provisions or requirements to which it is necessary to conform in order to be able to claim compliance with this International Standard.
