

IPC-A-600K

Acceptability of Printed Boards

If a conflict occurs between the English and translated versions of this document, the English version will take precedence.

Developed by the IPC-A-600 Task Group (7-31a) of the Product Assurance Committee (7-30) of IPC

Supersedes:

IPC-A-600J - May 2016
IPC-A-600H - April 2010
IPC-A-600G - July 2004
IPC-A-600F - November 1999

Users of this publication are encouraged to participate in the development of future revisions.

Acknowledgment	iii	2.6 Holes – Unsupported	42
1 Introduction	1	2.6.1 Haloing	42
1.1 Scope	1	2.7 Edge Board Contacts	43
1.2 Purpose	1	2.7.1 Surface Plating – Printed Board	
1.3 Approach To This Document	1	Edge Connector Lands	43
1.4 Classification	1	2.7.1.1 Surface Plating – Edge Connector	
1.5 Acceptance Criteria	2	Lands (Gap/Overlap Area)	45
1.6 Applicable Documents	3	2.7.2 Burrs on Edge-Board Contacts	46
1.6.1 IPC	3	2.7.3 Adhesion of Overplate	47
1.6.2 American Society of Mechanical		2.8 Marking	49
Engineers	4	2.8.1 Etched Marking	50
1.7 Dimensions and Tolerances	4	2.8.2 Ink Marking	52
1.8 Terms and Definitions	4	2.9 Solder Mask	54
1.9 Revision Level Changes	4	2.9.1 Coverage Over Conductors	
1.10 Workmanship	4	(Skip Coverage)	55
2 Externally Observable Characteristics	5	2.9.2 Registration to Holes (All Finishes) ...	56
2.1 Printed Board Edges	5	2.9.3 Registration to Rectangular	
2.1.1 Burrs	5	Surface Mount Lands	57
2.1.1.1 Nonmetallic Burrs	6	2.9.3.1 Registration to Round Surface	
2.1.1.2 Metallic Burrs	7	Mount Lands (BGA) – Solder	
2.1.2 Nicks	8	Mask-Defined Lands	58
2.1.3 Haloing	9	2.9.3.2 Registration to Round Surface	
2.2 Base Material Surface	10	Mount Lands (BGA) – Copper-	
2.2.1 Weave Exposure	11	Defined Lands	59
2.2.2 Weave Texture	12	2.9.3.3 Registration to Round	
2.2.3 Mechanically Induced		Surface Mount Lands	
Disrupted Fibers	13	(BGA) – (Solder Dam)	60
2.2.4 Surface Voids	14	2.9.4 Blisters/Delamination	61
2.3 Base Material Subsurface	15	2.9.5 Adhesion (Flaking or Peeling)	63
2.3.1 Measling	20	2.9.6 Waves/Wrinkles/Ripples	64
2.3.2 Crazeing	22	2.9.7 Tenting (Via Holes)	65
2.3.3 Delamination/Blister	25	2.9.8 Soda Strawing	66
2.3.4 Foreign Inclusions	28	2.10 Pattern Definition – Dimensional	68
2.4 Solder Coatings and Fused Tin Lead	30	2.10.1 Conductor Width and Spacing	68
2.4.1 Nonwetting	30	2.10.1.1 Conductor Width	69
2.4.2 Dewetting	31	2.10.1.2 Conductor Spacing	70
2.5 Holes – Plated-Through – General	33	2.10.2 External Annular Ring –	
2.5.1 Nodules/Rough Plating	33	Measurement	71
2.5.2 Pink Ring	34	2.10.3 External Annular Ring – Supported	
2.5.3 Voids – Copper Plating	35	Holes and Microvia Capture Land ...	72
2.5.4 Voids – Finished Coating	36	2.10.4 External Annular Ring –	
2.5.5 Lifted Lands – (Visual)	37	Unsupported Holes	74
2.5.6 Cap Plating of Filled Holes –		2.10.5 Surface Plating – Rectangular	
(Visual)	38	Surface Mount Lands	75
2.5.7 Back-Drilled Holes – (Visual)	40	2.10.6 Surface Plating – Round Surface	
		Mount Lands (BGA)	77
		2.10.7 Surface Plating – Wire Bond Pads ..	79
		2.11 Flatness	81

Table of Contents (cont.)

3 Internally Observable Characteristics	83		
3.1 Dielectric Materials	84		
3.1.1 Laminate Voids/Cracks (Outside Thermal Zone)	84		
3.1.2 Registration/Conductor to Holes	87		
3.1.3 Clearance Hole, Unsupported, to Power/Ground Planes	88		
3.1.4 Dielectric Material, Clearance, Metal Plane for Supported Holes	89		
3.1.5 Delamination/Blister	90		
3.1.6 Dielectric Removal	91		
3.1.6.1 Etchback	93		
3.1.6.2 Smear Removal	95		
3.1.6.3 Negative Etchback	97		
3.1.7 Layer-to-Layer Spacing	99		
3.1.8 Resin Recession	101		
3.1.9 Hole Wall Dielectric/Plated Barrel Separation (Hole Wall Pullaway)	102		
3.2 Conductive Patterns – General	103		
3.2.1 Etching Characteristics	105		
3.2.2 Print and Etch	107		
3.2.2.1 Overhang	108		
3.2.3 External Conductor Thickness (Foil Plus Plating)	109		
3.2.4 Non-Plated Layer Copper Foil Thickness	110		
3.2.5 Solder Mask Thickness	111		
3.3 Plated-Through Holes – General	112		
3.3.1 Copper Plating Voids	114		
3.3.2 Plating Nodules	115		
3.3.3 Plating Folds/Inclusions	116		
3.3.4 Wicking	118		
3.3.4.1 Wicking, Clearance Holes	119		
3.3.5 Innerlayer Inclusions	120		
3.3.6 Innerlayer Separation – Vertical (Axial) Microsection	121		
3.3.7 Innerlayer Separation – Horizontal (Transverse) Microsection	123		
3.3.8 Plating Separation	124		
3.3.9 Foil Crack – (Internal Foil) “C” Crack	126		
3.3.10 Foil Crack (External Foil) “A,” “B,” “D” Cracks	127		
3.3.11 Plating Crack (Barrel) “E” Crack	128		
3.3.12 Plating Crack – (Corner) “F” Crack	129		
3.3.13 Plating Microanomalies	130		
3.3.14 Annular Ring – Internal Layers	131		
		3.3.15 Annular Ring – Microvia to Target Land	134
		3.3.16 Microvia Target Land Contact Dimension	136
		3.3.17 Microvia Target Land Piercing	139
		3.3.18 Lifted Lands – (Cross-Sections)	140
		3.3.19 Copper Plating Thickness – Hole Wall	141
		3.3.20 Copper Wrap Plating	142
		3.3.21 Copper Cap Plating of Filled Holes	145
		3.3.22 Plated Copper Filled Vias (Through, Blind, Buried and Microvia)	147
		3.3.23 Material Fill of Through, Blind, Buried and Microvia Structures (Other than Copper Plating)	149
		3.3.24 Back-Drilled Holes (Microsection Evaluation)	151
		3.3.25 Solder Coating Thickness (Only When Specified)	152
	3.4 Plated-Through Holes – Drilled		153
	3.4.1 Burrs		154
	3.4.2 Nailheading		155
	3.5 Plated-Through Holes – Punched		156
	3.5.1 Roughness and Nodules		157
	3.5.2 Flare		158
	4 Miscellaneous		159
	4.1 Flexible and Rigid-Flex Printed Boards		159
	4.1.1 Coverlay Coverage – Coverfilm Separations		160
	4.1.2 Coverlay/Covercoat Coverage – Adhesives		162
	4.1.2.1 Adhesive Squeeze-Out – Land Area		162
	4.1.2.2 Adhesive Squeeze-Out – Foil Surface		163
	4.1.3 Access Hole Registration for Coverlay and Stiffeners		164
	4.1.4 Plating Anomalies		165
	4.1.5 Stiffener Bonding		166
	4.1.6 Transition Zone, Rigid Area to Flexible Area		167
	4.1.7 Solder Wicking/Plating Penetration Under Coverlay		168
	4.1.8 Laminate Integrity		169
	4.1.8.1 Laminate Integrity – Flexible Printed Board		170

Table of Contents (cont.)

4.1.8.2	Laminate Integrity – Rigid-Flex Printed Board	171
4.1.9	Etchback (Type 3 and Type 4 Only)	172
4.1.10	Smear Removal (Type 3 and 4 Only)	173
4.1.11	Trimmed Edges/Edge Delamination	174
4.1.12	Silver Film Integrity	176
4.2	Metal Core Printed Boards	178
4.2.1	Type Classifications	179
4.2.2	Spacing Laminated Type	180
4.2.3	Insulation Thickness, Insulated Metal Substrate	181
4.2.4	Insulation Material Fill, Laminated Type Metal Core	182
4.2.5	Cracks in Insulation Material Fill, Laminated Type	183
4.2.6	Core Bond to Plated-Through Hole Wall	184
4.3	Flush Printed Boards	185
4.3.1	Flushness of Surface Conductor	185
5	Cleanliness Testing	186
5.1	Solderability Testing	187
5.1.1	Plated-Through Holes (Applicable to Solder Float Test)	188
5.2	Electrical Integrity	190

1 INTRODUCTION

Introduction

1.1 SCOPE

This document describes the target, acceptable, and nonconforming conditions that are either externally or internally observable on printed boards. It represents the visual interpretation of minimum requirements set forth in various printed board specifications, e.g.; IPC-6010 series, J-STD-003, etc.

1.2 PURPOSE

The visual illustrations in this document portray specific criteria of the requirements of current IPC specifications. In order to properly apply and use the content of this document, the printed board should comply with the design requirements of the applicable IPC-2220 series document and the performance requirements of the applicable IPC-6010 series document. In the event the printed board does not comply with these or equivalent requirements, then the acceptance criteria should be as agreed between user and supplier (AABUS).

1.3 APPROACH TO THIS DOCUMENT

Characteristics are divided into two general groups:

- Externally Observable (section 2)
- Internally Observable (section 3)

“Externally observable” conditions are those features or imperfections which can be seen and evaluated on or from the exterior surface of the board. In some cases, such as voids or blisters, the actual condition is an internal phenomenon and is detectable from the exterior.

“Internally observable” conditions are those features or imperfections that require microsectioning of the specimen or other forms of conditioning for detection and evaluation. In some cases, these features may be visible from the exterior and require microsectioning in order to assess acceptability requirements.

Specimens should be illuminated during evaluation to the extent needed for effective examination. The illumination should be such that no shadow falls on the area of interest except those shadows caused by the specimen itself. It is recommended that polarization and/or dark field illumination be employed to prevent glare during the examination of highly reflective materials.

The illustrations in this document portray specific criteria relating to the heading and subheading of each page, with brief descriptions of the acceptable and nonconforming conditions for each product class. (See 1.4.) The visual quality acceptance criteria are intended to provide proper tools for the evaluation of visual anomalies. The illustrations and photographs in each situation are related to specific requirements. The characteristics addressed are those that can be evaluated by visual observation and/or measurement of visually observable features.

Supported by appropriate user requirements, this document should provide effective visual criteria to quality assurance and manufacturing personnel.

This document cannot cover all of the reliability concerns encountered in the printed board industry; therefore, attributes not addressed in this issue **shall** be AABUS. The value of this document lies in its use as a baseline document that may be modified by expansions, exceptions, and variations which may be appropriate for specific applications.

When making accept and/or reject decisions, the awareness of documentation precedence must be maintained.

This document is a tool for observing how a product may deviate due to variation in processes. Refer to IPC-9191.

IPC-A-600 provides a useful tool for understanding and interpreting Automated Inspection Technology (AIT) results. AIT may be applicable to the evaluation of many of the dimensional characteristics illustrated in this document.

IPC-9121 is a useful troubleshooting guideline for problems, causes and possible corrective actions related to printed board manufacturing processes.

1.4 CLASSIFICATION

This standard recognizes that electrical and electronic products are subject to classifications by intended end-item use. Three general end-product classes have been established to reflect differences in producibility, complexity, functional performance requirements, and verification (inspection/test) frequency. It should be recognized that there may be overlaps of product between classes.
