Preface

This preface, as well as all footnotes and annexes, is included for information purposes and is not part of ANSI/ISA-5.06.01-2007.

This document has been prepared as part of the service of ISA toward a goal of uniformity in the field of instrumentation. To be of real value, this document should not be static but should be subject to periodic review. Toward this end, the Society welcomes all comments and criticisms and asks that they be addressed to the Secretary, Standards and Practices Board; ISA; 67 Alexander Drive; P. O. Box 12277; Research Triangle Park, NC 27709; Telephone (919) 549-8411; Fax (919) 549-8288; E-mail: standards@isa.org.

The ISA Standards and Practices Department is aware of the growing need for attention to the metric system of units in general, and the International System of Units (SI) in particular, in the preparation of instrumentation standards. The Department is further aware of the benefits to USA users of ISA standards of incorporating suitable references to the SI (and the metric system) in their business and professional dealings with other countries. Toward this end, this Department will endeavor to introduce SI-acceptable metric units in all new and revised standards, recommended practices, and technical reports to the greatest extent possible. *Standard for Use of the International System of Units (SI): The Modern Metric System*, published by the American Society for Testing & Materials as IEEE/ASTM SI 10-97, and future revisions, will be the reference guide for definitions, symbols, abbreviations, and conversion factors.

It is the policy of ISA to encourage and welcome the participation of all concerned individuals and interests in the development of ISA standards, recommended practices, and technical reports. Participation in the ISA standards-making process by an individual in no way constitutes endorsement by the employer of that individual, of ISA, or of any of the standards, recommended practices, and technical reports that ISA develops.

CAUTION — ISA ADHERES TO THE POLICY OF THE AMERICAN NATIONAL STANDARDS INSTITUTE WITH REGARD TO PATENTS. IF ISA IS INFORMED OF AN EXISTING PATENT THAT IS REQUIRED FOR USE OF THE DOCUMENT, IT WILL REQUIRE THE OWNER OF THE PATENT TO EITHER GRANT A ROYALTY-FREE LICENSE FOR USE OF THE PATENT BY USERS COMPLYING WITH THE DOCUMENT OR A LICENSE ON REASONABLE TERMS AND CONDITIONS THAT ARE FREE FROM UNFAIR DISCRIMINATION.

EVEN IF ISA IS UNAWARE OF ANY PATENT COVERING THIS DOCUMENT, THE USER IS CAUTIONED THAT IMPLEMENTATION OF THE DOCUMENT MAY REQUIRE USE OF TECHNIQUES, PROCESSES, OR MATERIALS COVERED BY PATENT RIGHTS. ISA TAKES NO POSITION ON THE EXISTENCE OR VALIDITY OF ANY PATENT RIGHTS THAT MAY BE INVOLVED IN IMPLEMENTING THE DOCUMENT. ISA IS NOT RESPONSIBLE FOR IDENTIFYING ALL PATENTS THAT MAY REQUIRE A LICENSE BEFORE IMPLEMENTATION OF THE DOCUMENT OR FOR INVESTIGATING THE VALIDITY OR SCOPE OF ANY PATENTS BROUGHT TO ITS ATTENTION. THE USER SHOULD CAREFULLY INVESTIGATE RELEVANT PATENTS BEFORE USING THE DOCUMENT FOR THE USER'S INTENDED APPLICATION.

HOWEVER, ISA ASKS THAT ANYONE REVIEWING THIS DOCUMENT WHO IS AWARE OF ANY PATENTS THAT MAY IMPACT IMPLEMENTATION OF THE DOCUMENT NOTIFY THE ISA STANDARDS AND PRACTICES DEPARTMENT OF THE PATENT AND ITS OWNER.

ADDITIONALLY, THE USE OF THIS DOCUMENT MAY INVOLVE HAZARDOUS MATERIALS, OPERATIONS OR EQUIPMENT. THE DOCUMENT CANNOT ANTICIPATE ALL POSSIBLE APPLICATIONS OR ADDRESS ALL POSSIBLE SAFETY ISSUES ASSOCIATED WITH USE IN HAZARDOUS CONDITIONS. THE USER OF THIS DOCUMENT MUST EXERCISE SOUND

PROFESSIONAL JUDGMENT CONCERNING ITS USE AND APPLICABILITY UNDER THE USER'S PARTICULAR CIRCUMSTANCES. THE USER MUST ALSO CONSIDER THE APPLICABILITY OF ANY GOVERNMENTAL REGULATORY LIMITATIONS AND ESTABLISHED SAFETY AND HEALTH PRACTICES BEFORE IMPLEMENTING THIS DOCUMENT.

THE USER OF THIS DOCUMENT SHOULD BE AWARE THAT THIS DOCUMENT MAY BE IMPACTED BY ELECTRONIC SECURITY ISSUES. THE COMMITTEE HAS NOT YET ADDRESSED THE POTENTIAL ISSUES IN THIS VERSION.

The following members of ISA5.6 contributed to the development of this standard:

NAME	AFFILIATION
A. Habib, <i>Chair</i>	Automation Consultant
A. Amdur	Consultant
D. Beaty	DLB Associates
P. Blok	Pharma Team USA
R. Duggins	Maverick Technologies
J. Halajko	FMC, Inc.
R. Bhala	Sanofi Pasteur
S. Kolla	Bowling Green State University
R. Topliff	CH2M HILL
R. Wood	University of Alberta

The following people served as voting members of ISA5:

NAME	AFFILIATION
A. Iverson, <i>Chair</i>	Ivy Optics
T. McAviney, <i>Managing Director</i>	Jacobs Engineering
G. Barta	Consultant
C. Borel	Spectrum Engineering Inc.
J. Carew	Consultant
A. Habib	Automation Consultant
G. Ramachandran	Motiva Enterprises LLC

This standard was approved for publication by the ISA Standards and Practices Board on 17 August 2007.

Foreword

Learning and configuring today's control software packages is easier than ever before. Documentation, however, is not such an easy task. With the increased capabilities of software packages to handle more process and operator interfaces, the complexity of defining and documenting these requirements increases. This standard directly addresses this documentation issue.

The ISA5.6 subcommittee was established by ISA5, Documentation of Measurement and Control Instruments and Systems, at the request of control systems engineers involved in the automation of plant operations using a wide variety of computer-based platforms. These platforms included distributed control systems, programmable logic controllers and industrialized personal computers offered by a variety of suppliers.

The need for documentation to help define control software prior to hardware selection, especially for batch sequence logic, was identified due to its complexity. ISA's Standards & Practices Board subsequently expanded the scope of ISA5.6 to include the software documentation of continuous processes.

This is a preview of "ANSI/ISA 5.06.01-200...". [Click here to purchase the full version from the ANSI store.](#)

1 Scope

The scope of this standard is:

- Covers real-time batch, discrete and continuous process automation systems.
- Defines regulatory, event-driven and time-driven control system actions.
- Encompasses both digital and analog control devices in addition to non-control actions (for example, operator messages and batch end reports).
- Encompasses both normal and abnormal operational requirements of systems and shows the interactions between them.
- Uses a set of terms that relate directly to the languages commonly used by plant operators.
- Excludes interactions with higher-level systems.

Within the parameters of this scope, the standard is intended to:

- Establish functional requirements specifications for control software documentation that covers the classes of industrial automation equipment and systems consisting of distributed control systems, programmable controllers and industrial personal computers (see Figure 1).
- Provide techniques for documenting control system software. The software to be generated is a function of the computer system chosen for a particular project. The documentation procedure set forth in this standard is independent of the hardware/software system that is chosen.
- Provide a basis for validation of run-time application software after it is developed and tested to ensure that the initial requirement specification has been met.

The documentation resulting from use of this standard:

- Can be used for control software definition, design, testing and validation.
- Is not intended to require specialized knowledge of any particular engineering or computer science discipline to develop or understand.
