Contents

1 Scope	1
2 Normative references	2
3 Terms and definitions	3
4 General requirements and general requirements for tests	5
5 Classification	5
6 Identification, marking and documents	5
7 Power input	7
8 Environmental conditions	7
9 Protection against electric shock hazards	8
10 Protection against mechanical hazards	9
11 Protection against hazards from unwanted or excessive radiation	10
12 Protection against hazards of ignition of flammable anaesthetic mixtures	10
13 Protection against excessive temperatures and other safety hazards	11
14 Accuracy of operating data and protection against hazardous output	15
15 Abnormal operation and fault conditions: environmental tests	15
16 Constructional requirements	17
Annexes A to L	25
Annex M (informative) Rationale statement	26
Annex N (informative) Table of typical ranges of volume for collection containers for specific uses	27
Annex O (informative) Lumen (passageway) size and its effects on flow	28

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10079-1 was prepared by Technical Committee ISO/TC 121, *Anaesthetic and respiratory equipment*, Subcommittee SC 8, *Suction devices for hospital and emergency care use*.

This second edition cancels and replaces the first edition (ISO 10079-1:1991), which has been technically revised.

ISO 10079 consists of the following parts, under the general title *Medical suction equipment*:

- *Part 1: Electrically powered suction equipment — Safety requirements*
- *Part 2: Manually powered suction equipment*
- *Part 3: Suction equipment powered from vacuum or pressure source*

Annexes A to L of this part of ISO 10079 refer to Appendixes A to L of IEC 60601:1988, respectively. Annexes M, N and O are for information only.
