Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1012 was prepared by Technical Committee ISO/TC 42, *Photography*.

This third edition cancels and replaces the second edition (ISO 1012:1991), of which it constitutes a technical revision. This revision features an expanded scope in order to include films in rolls for general use as well as films in sheets. The intent is to provide a standard for these film formats where they have not been specified in other International Standards. These films are used for portraits, school photography portraits, wedding photography, catalogue photography and the like. Core dimensions have been added to this International Standard, as have a number of new sheet film sizes. 46 mm core dimensions have not been specified. Recommendations on package marking have been added so as to encourage the provision of guidance as to the intended use of the product.

Annexes A and B of this International Standard are for information only.
