Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10131-2 was prepared by Technical Committee ISO/TC 136, *Furniture*, Subcommittee SC 1, *Test methods*.

ISO 10131 consists of the following parts, under the general title *Foldaway beds — Safety requirements and tests*:

- *Part 1: Safety requirements*
- *Part 2: Test methods*

Introduction

This part of ISO 10131 describes a number of tests consisting of the application, to various parts of the bed, of loads or forces simulating normal functional use, as well as misuse that can reasonably be expected to occur.

These tests are designed to evaluate properties without regard to materials, design/construction or manufacturing processes.
