Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Reagents	2
6 Apparatus	3
7 Sampling and samples	4
7.1 Laboratory sample.....	4
7.2 Preparation of test samples.....	4
7.2.1 General.....	4
7.2.2 Method specified in ISO 2596.....	4
7.2.3 Method specified in ISO 7764.....	4
8 Procedure	4
8.1 Number of determinations.....	4
8.2 Test portion.....	4
8.3 Blank test and check test.....	5
8.3.1 Blank test.....	5
8.3.2 Check test.....	5
8.4 Determination.....	5
8.4.1 Decomposition of the test portion.....	5
8.4.2 Treatment of the residue.....	5
8.4.3 Preparation of the test solution.....	6
8.4.4 Adjustment of the atomic absorption spectrometer.....	6
8.4.5 Atomic absorption measurements.....	7
9 Expression of results	7
9.1 Calculation of mass fraction of magnesium.....	7
9.2 General treatment of results.....	7
9.2.1 Repeatability and permissible tolerance.....	7
9.2.2 Determination of analytical result.....	8
9.2.3 Between-laboratories precision.....	8
9.2.4 Check for trueness.....	8
9.2.5 Calculation of final result.....	9
9.3 Oxide factor.....	9
10 Test report	10
Annex A (normative) Flowsheet of the procedure for the acceptance of analytical values for test samples	11
Annex B (informative) Derivation of repeatability and permissible tolerance formulae	12
Annex C (informative) Precision data obtained by international analytical trials	13
Bibliography	14

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 102, *Iron ore and direct reduced iron*, Subcommittee SC 2, *Chemical analysis*.

This fourth edition cancels and replaces the third edition (ISO 10204:2015), of which it constitutes a minor revision with the following changes:

- in [7.2](#), reference to ISO 2596 has been incorporated and [7.2](#) has been rearranged in a more appropriate layout/format;
- in [8.2](#), reference to ISO 2596 has been incorporated;
- “predried” has been deleted where it is inappropriate in [8.1](#), [8.2](#), and [8.3.2](#);
- in [Table 1](#), some minor changes have been made;
- in [9.2.4](#), [Formula \(7\)](#) and relevant descriptions have been modified to harmonize this subclause across all documents for which ISO/TC 102/SC 2 is responsible.
