Foreword	vi
Introduction	vii
1 Scope	1
2 Normative references	2
3 Terms, definitions and abbreviated terms	3
3.1 Terms and definitions.....	3
3.1.1 Robot, robot system, robot application, application.....	3
3.1.2 Sub-assemblies and components.....	4
3.1.3 Controls-related.....	6
3.1.4 Program-related.....	7
3.1.5 Power-, energy-related.....	8
3.1.6 Hazard-related.....	8
3.1.7 Role-related.....	8
3.1.8 Functional safety-related.....	9
3.1.9 Spaces, zones and distances.....	10
3.1.10 Risk reduction measures.....	11
3.1.11 Verification and validation.....	12
3.2 Abbreviated terms and symbols.....	12
4 Risk assessment	13
5 Design and risk reduction measures	13
5.1 Robot design.....	13
5.1.1 General.....	13
5.1.2 Materials, mechanical strength and mechanical design.....	13
5.1.3 Handling, lifting and transportation.....	14
5.1.4 Packaging.....	15
5.1.5 Stability.....	15
5.1.6 Temperature and fire risks.....	15
5.1.7 Special equipment.....	15
5.1.8 Position holding.....	15
5.1.9 Auxiliary axis (axes).....	15
5.1.10 Power loss or change.....	16
5.1.11 Component malfunction.....	16
5.1.12 Hazardous energy.....	16
5.1.13 Electrical, pneumatic and hydraulic parts.....	17
5.1.14 Tool centre point (TCP) setting.....	17
5.1.15 Payload setting.....	18
5.1.16 Cybersecurity.....	18
5.1.17 Robot class.....	18
5.2 Controls.....	19
5.2.1 General.....	19
5.2.2 Protection from unexpected start-up.....	19
5.2.3 Singularity.....	20
5.2.4 Interlocking devices.....	20
5.2.5 Status indication and warning devices.....	20
5.2.6 Labelling.....	20
5.2.7 Modes.....	20
5.2.8 Means of controlling the robot.....	23
5.2.9 Means of initiating automatic operation.....	25
5.3 Safety functions.....	25
5.3.1 General.....	25
5.3.2 Functional safety standards.....	25
5.3.3 Performance.....	25
5.3.4 Failure or fault detection.....	26

5.3.7	Electromagnetic compatibility (EMC)	27
5.4	Stopping functions	28
5.4.1	General	28
5.4.2	Emergency stop	28
5.4.3	Protective stop	29
5.4.4	Normal stop	29
5.5	Other safety functions	30
5.5.1	Single-point-of-control	30
5.5.2	Start/restart interlock and reset	30
5.5.3	Speed limit(s) monitoring	31
5.5.4	Enabling function	32
5.5.5	Monitored-standstill	33
5.5.6	Stopping time limiting	33
5.5.7	Stopping distance limiting	34
5.6	Simultaneous motion	34
5.7	Limiting robot motion	34
5.7.1	General	34
5.7.2	Mechanical limiting	35
5.7.3	Electro-mechanical limiting	35
5.7.4	Software-based limiting	35
5.7.5	Dynamic limiting	36
5.8	Movement without drive power	36
5.9	Lasers and laser equipment	36
5.10	Capabilities for collaborative applications	36
5.10.1	General	36
5.10.2	Hand-guided control (HGC)	36
5.10.3	Speed and separation monitoring (SSM)	37
5.10.4	Power and force limiting (PFL)	38
6	Verification and validation	38
6.1	General	38
6.2	Verification and validation	38
7	Information for use	38
7.1	General	38
7.2	Signals and warning devices	39
7.3	Marking	39
7.4	Signs (pictograms) and written warnings	39
7.5	Instruction handbook	40
7.5.1	General	40
7.5.2	Identification	40
7.5.3	Intended use	40
7.5.4	Installation	41
7.5.5	Stopping	41
7.5.6	Commissioning and programming	41
7.5.7	Operation and setting	42
7.5.8	Singularity	42
7.5.9	Hazardous energy	42
7.5.10	Movement without drive power	42
7.5.11	Cybersecurity	42
7.5.12	Functional safety	43
7.5.13	Teach pendants	45
7.5.14	Change or addition of component parts	46
7.5.15	Standards	46
7.5.16	Maintenance	46
7.5.17	Abnormal and emergency situations	46
7.5.18	Handling, lifting and transportation	46

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 299, *Robotics*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 310, *Advanced automation technologies and their applications*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This third edition cancels and replaces the second edition (ISO 10218-1:2011), which has been technically revised.

The main changes are as follows:

- additional requirements for design;
- mode requirements;
- clarifying requirements for functional safety;
- robot classification (Class I and Class II) for functional safety requirements;
- test methodology to determine the maximum force per manipulator for Class I robots;
- adding requirements for cybersecurity to the extent that it applies to industrial robot safety;
- incorporating safety requirements for industrial robots intended for use in collaborative applications (formerly, the content of ISO/TS 15066).

A list of all parts in the ISO 10218 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

This is a preview of ISO 10218-1:2025. [Click here to purchase the full version from the ANSI store.](#)

The ISO 10218 series has been created in recognition of the hazards that are presented by robotics in an industrial environment. This document addresses robots as partly completed machinery, while ISO 10218-2 addresses robots integrated into machinery (robot applications and cells).

This document is a type-C standard according to ISO 12100.

This document is of relevance for the following stakeholder groups representing the market players regarding robot safety:

- robot manufacturers (small, medium and large enterprises);
- robot application integrators (small, medium and large enterprises);
- health and safety bodies (regulators, accident prevention organisations, market surveillance, etc.).

Others can be affected by the level of safety achieved with the means of the document by the above mentioned stakeholder groups:

- robot application users/employers (small, medium and large enterprises);
- robot application users/employees (e.g. trade unions);
- service providers, e.g. for maintenance (small, medium and large enterprises);

The above-mentioned stakeholder groups have been given the possibility to participate in the drafting process of this document.

Robots and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the Scope of this document.

When provisions of a type-C standard are different from those that are stated in type-A or type-B standards, the provisions of the type-C standard take precedence over the provisions of the other standards for machines that have been designed and built in accordance with the provisions of the type-C standard.

In recognition of the variable nature of hazards with different uses of industrial robots, the ISO 10218 series is divided into two parts. This document provides requirements for safety of the robot. For safety of the integration and commissioning of industrial robot applications, ISO 10218-2:2025 provides requirements for the safeguarding of operators during integration, commissioning, functional testing, programming, operation, maintenance and repair.

The ISO 10218 series deals with robotics in an industrial environment, which is comprised of workplaces where the public is excluded and the allowed people (operators) are working adults. Other standards cover topics such as general characteristics, coordinate systems and axis motions, mechanical interfaces performance criteria and related testing methods, and end-effectors.

For ease of reading this document, the words “robot” and “robot application” refer to “industrial robot” and “industrial robot application” as defined in this document.

This document has been updated based on experience gained since the release of the ISO 10218 series in 2011. This document remains aligned with the minimum requirements of a harmonized type-C standard for robots in an industrial environment.

Where appropriate, ISO/TS 15066:2016 on the safety of collaborative robot applications was added to the ISO 10218 series. Because human-robot collaboration relates to the application and not to the robot alone, most of the requirements of ISO/TS 15066 have been incorporated into ISO 10218-2:2025. Safety functions that enable a collaborative task can be part of the robot or can be provided by a protective device, or a combination.

It is important to emphasize that the terms “collaborative operation” and “collaborative robot” are not used in this document. Only the application can be developed, verified and validated as a collaborative application.
