## **Industrial automation systems and integration — Product data representation and exchange —**

### **Part 22:**

#### **Implementation methods: Standard data access interface**

*Systèmes d'automatisation industrielle et intégration — Représentation et  
échange de données de produit —*

*Partie 22: Méthodes de mise en application: Interface normalisée d'accès  
aux données*

|--|-------------|
| 1 Scope .....  | 1           |
| 2 Normative references .....                                     | 2           |
| 3 Definitions and abbreviations .....                            | 3           |
| 3.1 Terms defined in ISO 10303-1 .....                           | 3           |
| 3.2 Terms defined in ISO 10303-11 .....                          | 3           |
| 3.3 Other definitions .....                                      | 4           |
| 3.3.1 application schema .....                                   | 4           |
| 3.3.2 concurrent access .....                                    | 4           |
| 3.3.3 constraint .....   | 4           |
| 3.3.4 current schema .....                                       | 4           |
| 3.3.5 external schema .....                                      | 4           |
| 3.3.6 foreign schema .....                                       | 4           |
| 3.3.7 identifier .....   | 4           |
| 3.3.8 implementation class .....                                 | 4           |
| 3.3.9 iterator .....   | 4           |
| 3.3.10 native schema .....                                       | 4           |
| 3.3.11 repository .....  | 4           |
| 3.3.12 schema instance .....                                     | 4           |
| 3.3.13 SDAI-model .....  | 4           |
| 3.3.14 SDAI language binding .....                               | 4           |
| 3.3.15 SDAI schema .....   | 5           |
| 3.3.16 session .....   | 5           |
| 3.3.17 validation .....  | 5           |
| 3.4 Abbreviations .....  | 5           |
| 4 SDAI overview .....  | 5           |
| 4.1 Data access interfaces .....                                 | 5           |
| 4.2 Operations and the session state .....                       | 5           |
| 4.3 Repositories, schema instances, and SDAI-models .....        | 5           |
| 4.4 Transactions and access modes .....                          | 6           |
| 4.5 The session, data dictionary and managing a population ..... | 7           |
| 4.6 SDAI parameter data schema .....                             | 8           |
| 4.7 Functional specification .....                               | 8           |
| 4.8 SDAI language bindings .....                                 | 9           |
| 4.9 Error handling .....   | 10          |
| 5 Fundamental principles .....                                   | 10          |

| 6 SDAI dictionary schema .....                      | 11 |
| 6.1 Introduction .....                              | 11 |
| 6.2 Fundamental concepts and assumptions .....      | 12 |
| 6.3 SDAI dictionary schema type definitions .....   | 12 |
| 6.3.1 base_type .....                               | 12 |
| 6.3.2 constructed_type .....                        | 12 |
| 6.3.3 underlying_type .....                         | 13 |
| 6.3.4 type_or_rule .....                            | 13 |
| 6.3.5 explicit_or_derived .....                     | 13 |
| 6.3.6 express_id .....                              | 13 |
| 6.3.7 info_object_id .....                          | 14 |
| 6.4 SDAI dictionary schema entity definitions ..... | 14 |
| 6.4.1 schema_definition .....                       | 14 |
| 6.4.2 interface_specification .....                 | 15 |
| 6.4.3 interfaced_item .....                         | 15 |
| 6.4.4 explicit_item_id .....                        | 16 |
| 6.4.5 used_item .....                               | 16 |
| 6.4.6 referenced_item .....                         | 16 |
| 6.4.7 implicit_item_id .....                        | 17 |
| 6.4.8 external_schema .....                         | 17 |
| 6.4.9 domain_equivalent_type .....                  | 18 |
| 6.4.10 named_type .....                             | 18 |
| 6.4.11 defined_type .....                           | 19 |
| 6.4.12 entity_definition .....                      | 19 |
| 6.4.13 attribute .....                              | 20 |
| 6.4.14 derived_attribute .....                      | 21 |
| 6.4.15 explicit_attribute .....                     | 21 |
| 6.4.16 inverse_attribute .....                      | 22 |
| 6.4.17 uniqueness_rule .....                        | 22 |
| 6.4.18 where_rule .....                             | 23 |
| 6.4.19 global_rule .....                            | 23 |
| 6.4.20 simple_type .....                            | 24 |
| 6.4.21 number_type .....                            | 24 |
| 6.4.22 integer_type .....                           | 24 |
| 6.4.23 real_type .....                              | 25 |
| 6.4.24 string_type .....                            | 25 |
| 6.4.25 binary_type .....                            | 26 |
| 6.4.26 logical_type .....                           | 26 |
| 6.4.27 boolean_type .....                           | 26 |
| 6.4.28 enumeration_type .....                       | 27 |
| 6.4.29 select_type .....                            | 27 |
| 6.4.30 aggregation_type .....                       | 27 |
| 6.4.31 variable_size_aggregation_type .....         | 28 |
| 6.4.32 set_type .....                               | 28 |
| 6.4.33 bag_type .....                               | 28 |
| 6.4.34 list_type .....                              | 29 |
| 6.4.35 array_type .....                             | 29 |
| 6.4.36 bound .....                                  | 30 |
| 6.4.37 population_dependent_bound .....             | 30 |

| 10.6.7   | Validate instance reference domain    | 80  |
| 10.6.8   | Validate schema instance              | 81  |
| 10.6.9   | Is validation current                 | 82  |
| 10.7     | SDAI-model operations                 | 82  |
| 10.7.1   | Delete SDAI-model                     | 82  |
| 10.7.2   | Rename SDAI-model                     | 83  |
| 10.7.3   | Start read-only access                | 84  |
| 10.7.4   | Promote SDAI-model to read-write      | 84  |
| 10.7.5   | End read-only access                  | 85  |
| 10.7.6   | Start read-write access               | 85  |
| 10.7.7   | End read-write access                 | 86  |
| 10.7.8   | Get entity definition                 | 87  |
| 10.7.9   | Create entity instance                | 87  |
| 10.7.10  | Undo changes                          | 88  |
| 10.7.11  | Save changes                          | 89  |
| 10.8     | Scope operations                      | 90  |
| 10.8.1   | Add to scope                          | 90  |
| 10.8.2   | Is scope owner                        | 91  |
| 10.8.3   | Get scope                             | 91  |
| 10.8.4   | Remove from scope                     | 92  |
| 10.8.5   | Add to export list                    | 93  |
| 10.8.6   | Remove from export list               | 93  |
| 10.8.7   | Scoped delete                         | 94  |
| 10.8.8   | Scoped copy                           | 95  |
| 10.8.9   | Validate scope reference restrictions | 96  |
| 10.9     | Type operations                       | 96  |
| 10.9.1   | Get complex entity definition         | 96  |
| 10.9.2   | Is subtype of                         | 97  |
| 10.9.3   | Is SDAI subtype of                    | 98  |
| 10.9.4   | Is domain equivalent with             | 98  |
| 10.10    | Entity instance operations            | 99  |
| 10.10.1  | Get attribute                         | 99  |
| 10.10.2  | Test attribute                        | 100 |
| 10.10.3  | Find entity instance SDAI-model       | 100 |
| 10.10.4  | Get instance type                     | 101 |
| 10.10.5  | Is instance of                        | 101 |
| 10.10.6  | Is kind of                            | 102 |
| 10.10.7  | Is SDAI kind of                       | 103 |
| 10.10.8  | Find entity instance users            | 103 |
| 10.10.9  | Find entity instance usedin           | 104 |
| 10.10.10 | Get attribute value bound             | 105 |
| 10.10.11 | Find instance roles                   | 106 |
| 10.10.12 | Find instance data types              | 106 |
| 10.11    | Application instance operations       | 107 |
| 10.11.1  | Copy application instance             | 107 |
| 10.11.2  | Delete application instance           | 108 |
| 10.11.3  | Put attribute                         | 109 |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75% of the member bodies casting a vote.

International Standard ISO 10303-22 was prepared by Technical Committee ISO/TC 184, *Industrial automation systems and integration*, Subcommittee SC4, *Industrial data*.

ISO 10303 consists of the following parts under the general title *Industrial automation systems and integration - Product data representation and exchange*:

- Part 1, Overview and fundamental principles;
- Part 11, Description method: EXPRESS language reference manual;
- Part 12, Description method: EXPRESS-I language reference manual;
- Part 21, Implementation method: Clear text encoding of the exchange structure;
- Part 22, Implementation method: Standard data access interface specification;
- Part 23, Implementation method: C++ language binding to the standard data access interface;
- Part 24, Implementation method: C language binding to the standard data access interface;
- Part 26, Implementation method: Interface definition language binding to the standard data access;
- Part 31, Conformance testing methodology and framework: General concepts;
- Part 32, Conformance testing methodology and framework: Requirements on testing laboratories and clients;
- Part 33, Conformance testing methodology and framework: Structure and use of abstract test suites;
- Part 34, Conformance testing methodology and framework: Abstract test methods;
- Part 35, Conformance testing methodology and framework: Abstract test methods for SDAI implementations;
- Part 41, Integrated generic resource: Fundamentals of product description and support;

This is a preview of "ISO 10303-22:1998". [Click here to purchase the full version from the ANSI store.](#)

- Part 42, Integrated generic resource: Geometric and topological representation;
- Part 43, Integrated generic resource: Representation structures;
- Part 44, Integrated generic resource: Product structure configuration;
- Part 45, Integrated generic resource: Materials;
- Part 46, Integrated generic resource: Visual presentation;
- Part 47, Integrated generic resource: Shape variation tolerances;
- Part 49, Integrated generic resource: Process structure and properties;
- Part 101, Integrated application resource: Draughting;
- Part 104, Integrated application resource: Finite element analysis;
- Part 105, Integrated application resource: Kinematics;
- Part 106, Integrated application resource: Building construction core model;
- Part 201, Application protocol: Explicit draughting;
- Part 202, Application protocol: Associative draughting;
- Part 203, Application protocol: Configuration controlled design;
- Part 204, Application protocol: Mechanical design using boundary representation;
- Part 205, Application protocol: Mechanical design using surface representation;
- Part 207, Application protocol: Sheet metal die planning and design;
- Part 208, Application protocol: Life cycle management - Change process;
- Part 209, Application protocol: Composite and metallic structural analysis and related design;
- Part 210, Application protocol: Electronic assembly, interconnect, and packaging design;
- Part 212, Application protocol: Electrotechnical design and installation;
- Part 213, Application protocol: Numerical control process plans for machined parts;
- Part 214, Application protocol: Core data for automotive design;
- Part 215, Application protocol: Ship arrangement;
- Part 216, Application protocol: Ship moulded forms;

- Part 217, Application protocol: Ship piping;
- Part 218, Application protocol: Ship structures;
- Part 220, Application protocol: Process planning, manufacture, and assembly of layered electronic products;
- Part 221, Application protocol: Functional data and their schematic representation for process plant;
- Part 222, Application protocol: Exchange of product data for composite structures;
- Part 223, Application protocol: Exchange of design and manufacturing product information for cast parts;
- Part 224, Application protocol: Mechanical product definition for process plans using machining features;
- Part 225, Application protocol: Building elements using explicit shape representation;
- Part 226, Application protocol: Ship mechanical systems;
- Part 227, Application protocol: Plant spatial configuration;
- Part 228, Application protocol: Building services: Heating, ventilation, and air conditioning;
- Part 229, Application protocol: Exchange of design and manufacturing product information for forged parts;
- Part 230, Application protocol: Building structural frame: Steelwork;
- Part 231, Application protocol: Process engineering data: Process design and process specification of major equipment;
- Part 232, Application protocol: Technical data packaging core information and exchange;
- Part 301, Abstract test suite: Explicit draughting;
- Part 302, Abstract test suite: Associative draughting;
- Part 303, Abstract test suite: Configuration controlled design;
- Part 304, Abstract test suite: Mechanical design using boundary representation;
- Part 305, Abstract test suite: Mechanical design using surface representation;
- Part 307, Abstract test suite: Sheet metal die planning and design;
- Part 308, Abstract test suite: Life cycle management - Change process;

- Part 501, Application interpreted construct: Edge-based wireframe;
- Part 502, Application interpreted construct: Shell-based wireframe;
- Part 503, Application interpreted construct: Geometrically bounded 2D wireframe;
- Part 504, Application interpreted construct: Draughting annotation;
- Part 505, Application interpreted construct: Drawing structure and administration;
- Part 506, Application interpreted construct: Draughting elements;
- Part 507, Application interpreted construct: Geometrically bounded surface;
- Part 508, Application interpreted construct: Non-manifold surface;
- Part 509, Application interpreted construct: Manifold surface;
- Part 510, Application interpreted construct: Geometrically bounded wireframe;
- Part 511, Application interpreted construct: Topologically bounded surface;
- Part 512, Application interpreted construct: Faceted boundary representation;
- Part 513, Application interpreted construct: Elementary boundary representation;
- Part 514, Application interpreted construct: Advanced boundary representation;
- Part 515, Application interpreted construct: Constructive solid geometry;
- Part 517, Application interpreted construct: Mechanical design geometric presentation;
- Part 518, Application interpreted construct: Mechanical design shaded representation.

The structure of this International Standard is described in ISO 10303-1. The numbering of the parts of the International Standard reflects its structure:

- Parts 11 to 13 specify the description methods,
- Parts 21 to 26 specify the implementation methods,
- Parts 31 to 35 specify the conformance testing methodology and framework,
- Parts 41 to 49 specify the integrated generic resources,
- Parts 101 to 106 specify the integrated application resources,
- Parts 201 to 232 specify the application protocols,

This is a preview of "ISO 10303-22:1998". [Click here to purchase the full version from the ANSI store.](#)

- Parts 301 to 332 specify the abstract test suites, and
- Parts 501 to 518 specify the application interpreted constructs.

Should further parts be published, they will follow the same numbering pattern.

Annexes A, B and C form an integral part of this part of ISO 10303. Annexes D and E are for information only.

## Introduction

ISO 10303 is an International Standard for the computer-interpretable representation and exchange of product data. The objective is to provide a neutral mechanism capable of describing product data throughout the life cycle of a product, independent from any particular system. The nature of this description makes it suitable not only for neutral file exchange, but also as a basis for implementing and sharing product databases and archiving.

This International Standard is organized as a series of parts, each published separately. The parts of ISO 10303 fall into one of the following series: description methods, integrated resources, application interpreted constructs, application protocols, abstract test suites, implementation methods, and conformance testing. The series is described in ISO 10303-1. This part of ISO 10303 is a member of the implementation methods series.

This part of ISO 10303 specifies the standard data access interface (SDAI) to data defined using ISO 10303-11 (EXPRESS). Operations are defined that give the application programmer the capability to manipulate data through this interface based upon its description in the defining schema or schemas. The standardization of a data access interface along with data definitions facilitates integration of different software components from different vendors.

Major subdivisions in this part of ISO 10303 are:

- SDAI environment constructs defined using EXPRESS found in clauses 6 through 9;
- SDAI operations, errors and state found in clauses 10 through 12;
- Implementation classes of the SDAI functionality to which implementations claim conformance found in clause 13.

Computer application systems are implemented using computing languages. The specification of the functionality defined in this part of ISO 10303 in a particular computing language is referred to as an SDAI language binding. Since there are many computing languages, many SDAI language bindings are possible. SDAI language bindings are specified as other parts of ISO 10303 within the implementation method series.

Implementations of SDAI language bindings are not required to support the complete set of capabilities specified in this part of ISO 10303. Specific sets of capability are grouped into implementation classes. The implementation classes against which conformance may be claimed are defined in clause 13.
