

ISO 105-B04

Textiles — Tests for colour fastness —

**Part B04:
Colour fastness to artificial weathering: Xenon arc fading lamp test**

Textiles — Essais de solidité des coloris —

*Partie B04: Solidité des coloris aux intempéries artificielles :
Lampe à arc au xénon*

**Fifth edition
2024-03**

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	2
5 Materials	2
5.1 Blue wool references.....	2
5.2 Glass case for blue wool references.....	2
5.3 Specimen mounting cards.....	2
5.4 Specimen covers.....	2
5.5 Specimen holders.....	2
5.6 Grey scale for assessing change in colour.....	2
6 Apparatus	3
6.1 Laboratory light source.....	3
6.1.1 General.....	3
6.1.2 Spectral irradiance.....	3
6.2 Test chamber.....	4
6.3 Radiometer.....	5
6.4 Temperature sensors.....	5
6.4.1 General.....	5
6.4.2 Chamber air temperature thermometer.....	5
6.4.3 Black-standard thermometer (BST) and black-panel thermometer (BPT).....	5
7 Exposure conditions	5
7.1 General.....	5
7.2 Exposure of test specimens.....	5
7.3 Exposure of colour fastness references.....	6
8 Test specimens	6
9 Procedure	6
9.1 General.....	6
9.2 Exposure methods.....	7
9.2.1 General.....	7
9.2.2 Method 1.....	7
9.2.3 Method 2.....	7
9.2.4 Method 3.....	8
9.3 Drying.....	8
9.4 Mounting for assessment.....	8
10 Assessment of colour fastness to weathering	8
11 Test report	9
Annex A (informative) General information on colour fastness to light	10
Annex B (informative) Radiometer for controlling exposure duration	12
Bibliography	13

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 38, *Textiles*, Subcommittee SC 1, *Tests for coloured textiles and colorants*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 248, *Textiles and textile products*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This fifth edition cancels and replaces the fourth edition (ISO 105-B04:1994), which has been technically revised.

The main changes are as follows:

- the Scope has been refined to differentiate this document from ISO 105-B10;
- the description of the test apparatus has been harmonized with ISO 105-B10. This takes into account current technology, but does not discredit the test procedure described in this document;
- Type I and Type II daylight filters for xenon-arc lamps have been introduced.

A list of all parts in the ISO 105 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

ISO 105 was previously published in thirteen “parts”, each designated by a letter (e.g. “Part A”), with publication dates between 1978 and 1985. Each part contained a series of “sections”, each designated by the respective part letter and by a two-digit serial number (e.g. “Section A01”). These sections are now being republished as separate documents, themselves designated “parts” but retaining their earlier alphanumeric designations.
