	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and units	1
5 Practical factors affecting accuracy	2
5.1 General	2
5.2 Accuracy	2
5.3 Influence of temperature on accuracy	2
5.4 Accidents or abnormal environment	2
6 Types of measurement	2
7 Test methods	3
7.1 General test conditions	3
7.2 Ageing test programme	3
7.3 Temperature simulation test programme	4
7.4 Uncertainty of measurement	5
8 Calculation of accuracy	6
8.1 General	6
8.2 Calculation of the effect of ageing on accuracy	6
9 Relationship between the calculated accuracy and the accuracy classification indicated	8
10 Indication of the accuracy classification	8
11 Reliability	8
Annex A (normative) Statistical evaluation of accuracy	9
Annex B (informative) Evaluation of coefficients α and c from the differences of rates	12
Annex C (informative) Reliability	14
Bibliography	15

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 114, *Horology*, Subcommittee SC 11, *Indication of accuracy*.

This second edition cancels and replaces the first edition (ISO 10553:2003), which has been technically revised with the following changes:

- Addition of ISO 16269-6:2014 and deletion of ISO 3207:1975 in [Clause 2](#);
- Deletion of the **indicated accuracy classification** definition;
- Adaptation of the Normal and Abnormal distributions ([A.4.1](#) and [A.4.2](#)) according to ISO 16269-6:2014;
- Addition of keys after [Figures B.1](#) and [B.2](#).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
